Phone: (608)571-98-42

- I am currently a 3rd year PhD student at Department of Economics at the University of Wisconsin-Madison.
- Major field: Industrial Organization
- Minor field: Econometrics
- Courses taken:
  - Graduate Industrial Organization sequence (two semester courses from Lorenzo Magnolfi and Alan Sorensen),
  - Graduate Econometrics sequence (two semester courses from Xiaoxia Shi and Joachim Freyberger),
  - Advanced Microeconomics course,
  - Probability Theory course from Math department,
  - First-year Microeconomics, Macroeconomics, Econometrics sequences.
- My research interests lie in the field of Industrial Organization and involve topics of consumer search, product bundling and niche products.

Because my research interests include consumer search and bundling, they directly relate to digitization of the economy since a large part of consumer search happens on the Internet. Bundling is quite widespread on the Internet not only when usual goods are sold online, but also when information goods are bundled.

- From Fall 2016 up to now I am a Research Assistant for Jesse Gregory working on the project "The Equilibrium Effects of Housing Vouchers on Neighborhood Composition"
- I also have a part of my research devoted to microeconomics of tournaments with a recent working paper with Dmitry Dagaev "Round-Robin Tournaments with Limited Resources"
