## Introduction

Addressing American Indian and Alaska Native data gaps and data quality issues in federal AI/AN datasets is critical as agencies, tribes, nonprofits, businesses, and other stakeholders use federal data to make effective and data-driven decisions on business development, land and resource management, and program assessment and administration.

To begin to address these issues, the Bureau of Indian Affairs (BIA) and the U.S. Census Bureau (Census) signed a Memorandum of Understanding (MOU) on January 13th, 2016 to work together to improve the quality and accuracy of AI/AN data. The MOU established the American Indian/Alaska Native Data Improvement Workgroup (Workgroup) to share, discuss, and resolve issues concerning AI/AN data. The Workgroup's formal membership consists of representatives from the BIA, Census, and the Department of the Interior's Office of Policy Analysis (PPA), and allows for informal participation by other interested federal agencies.

A key first step identified by the Workgroup was to create an inventory that catalogs and characterizes current federal AI/AN data collections. The AI/AN data inventory is critical to identify and address common data issues and data gaps. To complete this task, the Office of Policy Analysis (PPA) in the Department of the Interior consolidated information on federal AI/AN data collections from Data.Gov, the federal IT Dashboard, and direct responses from federal agencies. This inventory is included in Attachment A.

This paper describes the methods used to identify federal AI/AN data collections and presents a preliminary analysis of the inventory to date. The analysis and inventory are preliminary as we continue to work with agencies to identify AI/AN data. Tribal consultations will be conducted subsequent to this initial, fact finding stage, as federal agencies' AI/AN data holdings are assessed, and data gaps and quality issues are identified.

## Background

The need for an inventory of AI/AN data are immediate and significant. The literature on AI/AN data availability is limited, revealing one inventory of data relating to economic development in Indian Country. Todd[1] identified AI/AN data variables and sources used in over twenty studies that compared economic outcomes across reservations to summarize AI/AN demographic, business and financial, and land and government data and data gaps.

Reliable, complete, and consistent demographic business and financial, and land and government data, at a minimum, are critically needed to promote AI/AN economic development and growth. For example, Payson[2] details how producing tribal economic and government accounts (comparable to Gross Domestic Product and Government Finance Statistics) has the potential to greatly improve economic development on reservations by providing an economic measurement tool tribes can use to attract investors.

Data sets relating to Tribal population estimates are of paramount importance as billions of federal and state funds are allocated annually based on population counts. Another data priority is AI/AN labor market information on and near reservations. There is also a need for data in the areas of tribal governments, reservation business activity, and longitudinal data on reservations and households. A number of limitations of existing data sources are discussed in more detail in the endnotes.[3]

# Objective, Scope, and Methods

## Objective and Scope

The first objective of this report is to inventory and characterize current federal AI/AN data collections, including what data are being collected by agency and the accessibility to potential users. While state and tribal governments, and non-governmental organizations are important sources of AI/AN data, their inclusion was beyond the scope of this report. The second objective to identify common data gaps and quality issues, and promote interagency discussions on improving federal AI/AN data.

The federal AI/AN data identified in the inventory are defined as federal datasets, data collections, and data sources describing AI/AN populations or tribal lands, including:

- Collections that are not primarily AI/AN, but include relevant AI/AN information that can be extracted as a subset,
- Data collected primarily, as part of an official survey or census, or secondary as part of program administration or research, and
- Publicly and non-publicly available data.

Both publicly available and non-publicly available data collections are included in the inventory, as the Federal Government is both a *consumer* and a *supplier to the public* of AI/AN data. Both publicly available and non-public administrative data are essential for effective programs, services, and economic development, and both suffer from quality issues and data gaps. The identification of data collections helps to establish a baseline for federal agencies to begin addressing AI/AN data gaps and quality issues. Instances occur where both publicly available tabulations and the internal database containing the same underlying micro-data are both identified. These are counted as two distinct data collections, as the availability of information differs depending on the data user. Data collections that may include AI/AN or tribal land data, but which cannot be identified or extracted from the larger data collection, are not included.

It should be noted that this report does not advocate for federal agencies to make public all federally collected data. Many federal datasets include personally identifiable information (PII) that federal agencies are legally required to keep private for the safety and privacy of citizens who respond to federal surveys and programs.

## AI/AN Data Identification Methods

Three approaches were used to identify federal AI/AN data collections for the federal AI/AN data collections inventory:

- Identification of data collections on data.gov that include AI/AN data
- Identification of databases listed on the federal IT Dashboard that include AI/AN data
- A government-wide data call of federal agencies

## Data.gov

Data.gov is an open data website maintained by the General Services Administration that launched in June of 2009 to promote an open and transparent government.[4] The website catalogs metadata on federal datasets and collections with the intent of allowing the public to easily find and access datasets produced by the Federal Government. Since its launch in 2009, the site has grown from 47 data collections to 184,557, of which 146,796 are maintained by federal agencies.[5]

Data.gov includes a search capability and various filter options that allow the user to find the data of interest. If the search term is included in the name, description, or indicated as a key word in the catalog, the data collection appears in the search results. To identify AI/AN data collections the catalog was limited to federal collections and the following search terms were used:

- American Indian
- Alaska Native
- Native American
- Tribal
- Tribe

Relevant information extracted for each data collection for this report included the agency, name of data, a description of the data, and the data format.

The results from each search term were reviewed to eliminate duplicates and condense multiple entries for the same data collection. Duplicate entries occurred when search terms yielded the same data collection and when data collections had multiple entries for different years; these duplicates were eliminated. For example, the American Community Survey (ACS) has separate entries in the data.gov catalog for its 2014, 2013, 2012, etc. releases. All multiple year entries were considered duplicates and eliminated to leave one entry per data collection. Some collections in the catalog also had multiple entries for different geographic areas or types of information available in the collection. This was especially prevalent with boundary and geospatial data collections that have multiple entries for different shapefiles or geographic 'layers'. For example, the Environmental Protection Agency has multiple entries for the different types of facilities available in their Facility Register Service. These entries were condensed and counted as one collection.

Although data.gov identified many federal AI/AN data collections, it does not include administrative data, and is also limited to data collections federal agencies identify for the catalog. Administrative data are data that are collected for program administration purposes. Examples include transaction records, application forms, and record keeping.

## The IT Dashboard

To address the administrative data gap in data.gov, databases were identified through the IT Dashboard. The IT Dashboard is a federally managed website that tracks federal information technology investments by agency and is updated annually to provide information and track progress on federal information technology investments over time.[6]

Databases that include AI/AN data were identified using the "IT Portfolio" file. The "IT Portfolio" contains information on major IT investments including the agency, bureau, investment title, investment description, primary and secondary service areas, and total IT spending on the investment for the past three years. Many government agencies require major IT Investments to meet their programmatic needs.

Four methods were used to identify databases that include data on AI/AN populations and tribal lands:

- Filtering by primary or secondary service area code of 361, "American Indian and Alaska Native Relations".
- A text search in the investment title or investment description for same search terms used for data.gov: "American Indian", "Alaska Native", "Native American", "Tribe", or "Tribal."
- Any IT investment for the Bureau of Indian Affairs, Bureau of Indian Education, and the Indian Health Service
- A manual review of investment descriptions to identify databases potentially containing information on AI/AN individuals or lands as part of a larger, non-primarily Indian dataset.

## Data Call

Data.gov and the IT Dashboard identified many AI/AN data collections, but agencies may not put all collections on data.gov, and many data are not stored in databases that would require a major IT investment listed on the IT Dashboard. Also, as indicated above, one method of identification included a manual review of IT investment descriptions that incurred risk of including databases that do not contain AI/AN data. To account for these issues, PPA sent a data call for identification of AI/AN data collections to federal agencies.

A data call is a request to collect data or information from other organizations or federal agencies. For this data call, the information found through data.gov and the IT Dashboard was used to pre-populate a collection form that requested federal agencies:

1. Review and validate the information found through data.gov and the IT Dashboard
2. Identify AI/AN data collections their agency collects and maintains that were not already listed, and
3. Include more information on data collections that could not be found through online sources.

The data call was sent to nineteen federal agencies. Responses were received from seventeen. Agency responses were used to review and edit information from Data.Gov and the IT Dashboard to prepare this draft inventory.

A "*" symbol next to the agency name in Table 1 indicates the agency did not respond to the data call, meaning all identifications were made through data.gov and the IT Dashboard, and have not been verified by the agency.

# Results

PPA identified 448 AI/AN data collections from twenty agencies. The information provided varies by data collection. All data collections identify the agency, name of the data or program, and a description of the data. The information on counts is a useful starting point, but it is recognized that this type of information does not provide information about how the data are used, the frequency of data use, and data quality.

## Data Collections by Agency and Accessibility

Table 1 shows the total number of AI/AN data collections by agency, ranked highest to lowest by number of collections. It also includes the number of publicly available and Limited Non-Federal Access data collections. A data collection with Limited Non-Federal Access includes those that allow a limited number of individuals to view data, including collections where a participating individual or tribal government can view their own data, or instances where high level aggregates are available in report form, but the more granular data, such as breakouts by tribe, are not available to the public.

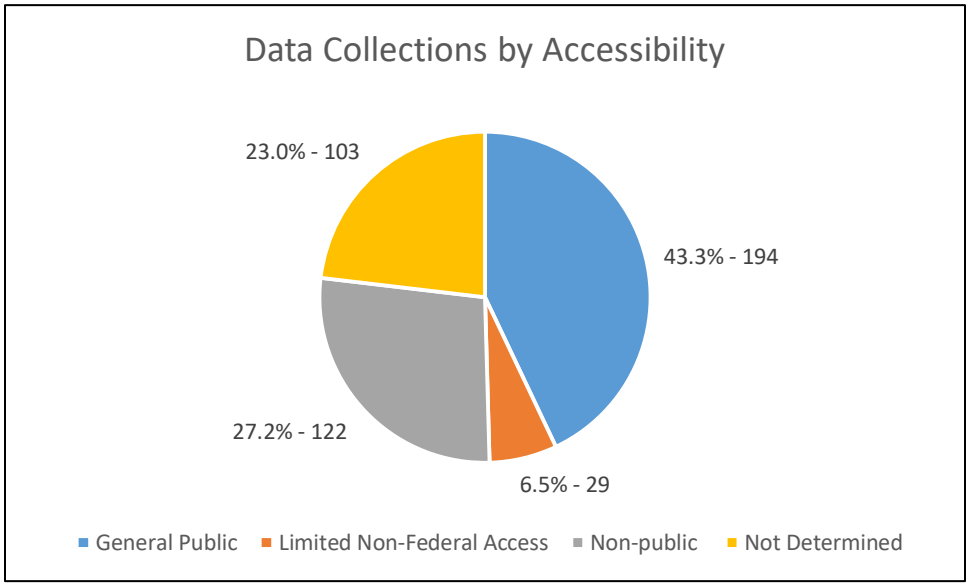

## Table 1. Number of Data Collections by Agency

| Agency | Number of Data Collections | Publicly Available | Limited Non-Federal Access |
|---|---|---|---|
| Department of the Interior | 149 | 39 | 14 |
| Department of Agriculture** | 54 | 8 | 1 |
| Environmental Protection Agency** | 48 | 35 | 1 |
| Department of Health and Human Services | 40 | 23 | 2 |
| Department of Commerce | 24 | 21 | 0 |
| Department of Justice | 23 | 9 | 3 |
| Department of Energy | 20 | 19 | 1 |
| Department of Transportation | 16 | 11 | 0 |
| Department of Housing and Urban Development* | 14 | 3 | 0 |
| Department of Homeland Security | 14 | 2 | 2 |
| Department of the Treasury | 11 | 3 | 1 |
| Department of Education | 9 | 8 | 1 |
| Department of Labor | 8 | 7 | 0 |
| Department of Defense | 9 | 1 | 1 |
| General Services Administration | 3 | 2 | 1 |
| Small Business Administration | 2 | 0 | 0 |
| Federal Financial Institutions Examination Council*** | 1 | 1 | 0 |
| Nuclear Regulatory Commission | 1 | 1 | 0 |
| Social Security Administration | 1 | 0 | 1 |
| Consumer Financial Protection Bureau*** | 1 | 1 | 0 |
| Department of Veterans Affairs | 0 | 0 | 0 |
| **Total** | **448** | **194** | **29** |

*Agency did not respond to data call.
**Partial response to data call.
***Agency did not receive a data call form. Data collections were identified via data call but are maintained by a different agency or council.

Chart 1 shows that of the 448 data collections identified, 43.3% (194) are publicly available. However, 23.0% (103) of the identified collections do not have a determined accessibility, meaning the agency did not provide that information and PPA was unable to determine the accessibility with certainty.

### Chart 1. Data Collections by Accessibility

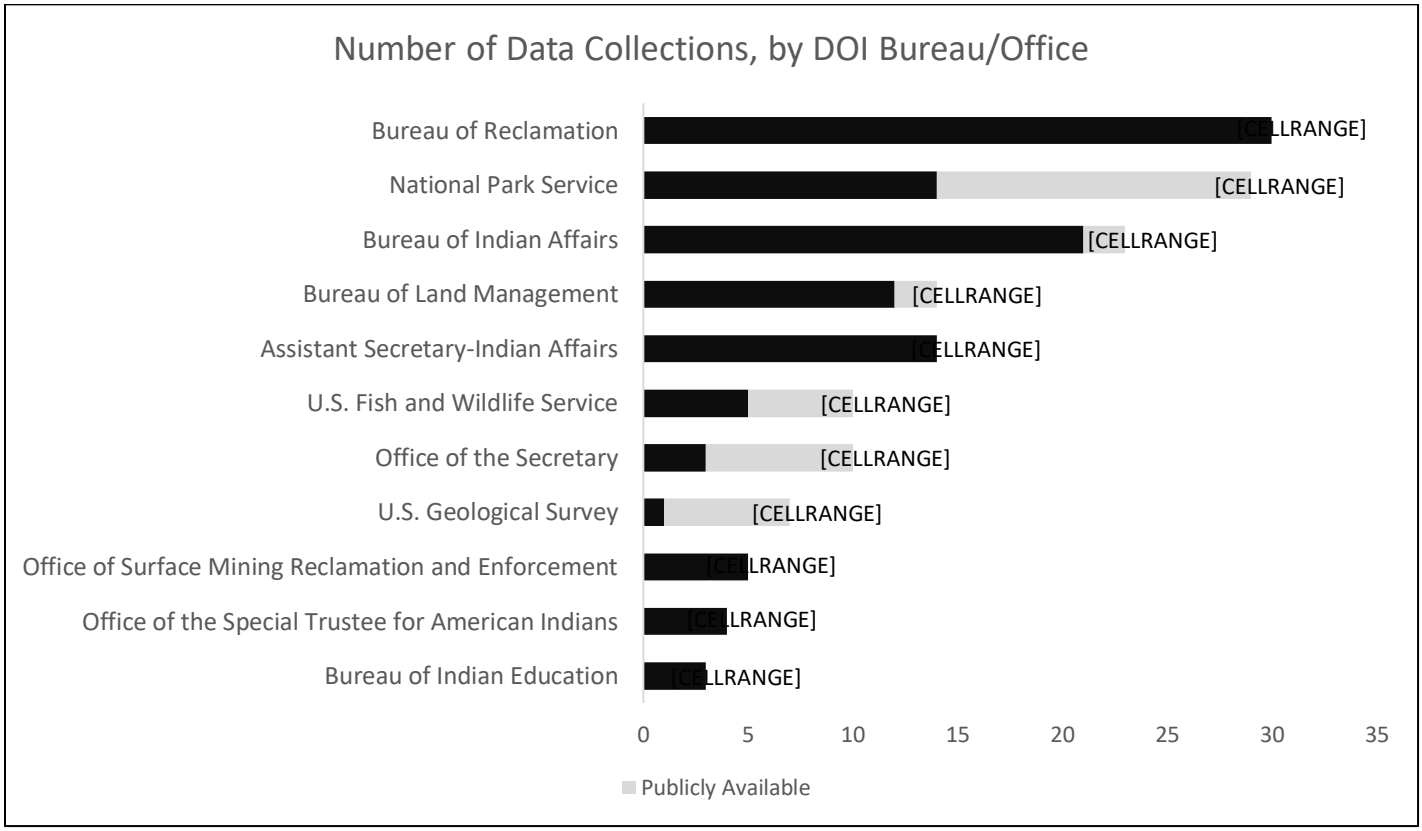

Below are breakouts by Bureau/Office and summaries on the top five agencies, which represents 70.3% of the total identified AI/AN data collections.[7]

## Department of the Interior

The Department of the Interior (DOI) has 149 data sets, the highest number of AI/AN data collections identified, with over double the number of data collections compared to the next agency. It is to be expected that DOI has a large number of AI/AN data collections as the agency's mission is to "protect and manage the Nation's natural resources and cultural heritage; provide scientific and other information about those resources; and honor its trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities." To effectively carry out this mission, many of the DOI's Bureaus and Offices provide services to, and work with tribes. However, it should also be noted that as an office within the DOI, PPA was better able to canvas DOI's Bureaus and Offices with data call forms. For other federal agencies, PPA relied on the White House Council on Native American Affairs to canvas their respective agencies. The different collection strategy for DOI may have caused more agency coverage compared to others.

Chart 2 shows the number of AI/AN data collections by DOI Bureau and Office. The two Bureaus with the highest number of identified AI/AN data collections are the Bureau of Reclamation (Reclamation) and the National Park Service (NPS), followed by the Bureau of Indian Affairs.

Chart 2. Number of Data Collections, by DOI Bureau/Office

The AI/AN data collected by Reclamation is for water-related projects and studies on tribal lands, including instrumentation readings at BIA dams, water delivery support, and reports prepared for needs assessments, environmental impact studies, cost estimates, etc. Reclamation also maintains data on AI/AN artifacts and archaeological sites. None of the data collections for Reclamation were confirmed as publicly available, indicating the data are primarily for program administration purposes. The NPS also maintains data on archaeological sites, as well as historic places, geospatial data on NPS boundaries, Native American Graves Protection and Repatriation Act (NAGPRA) notices data, and others. With nine collections identified as accessible to the public, the NPS is the DOI Bureau with the highest number of publicly available data collections, including the administrative boundaries of the NPS units, the National Register of Historic Places, the National Register & Landmarks Application, the NAGPRA summaries database, and the Culturally Unidentifiable and Culturally Affiliated Native American inventories database.

While Reclamation and NPS have the highest number of collections identified as standalone Bureaus, the DOI's AI/AN focused Bureaus and Offices have the highest combined number of AI/AN data collections at 47, including the Bureau of Indian Affairs (BIA), the Bureau of Indian Education (BIE), the Assistant Secretary-Indian Affairs, and the Office of the Special Trustee for American Indians. These data cover the numerous programs administered by these Bureaus and Offices, and because many contain personally identifiable information, are not public. Of the 47, two are confirmed as publicly available, the BIA Indian Lands Dataset, which depicts feature location, selected demographics and other

associated data for the 567 Federally Recognized tribes in the contiguous U.S. and Alaska, and regional budget formulation input results, which is information collected by tribes and tribal programs used to identity BIA regional priorities for the formulation of the BIA's Annual Budget. The DOI has 40 publicly available data sets, indicating the majority of data are collected for program and project administration and cannot be made public due to personally identifiable information (PII).

## Environmental Protection Agency

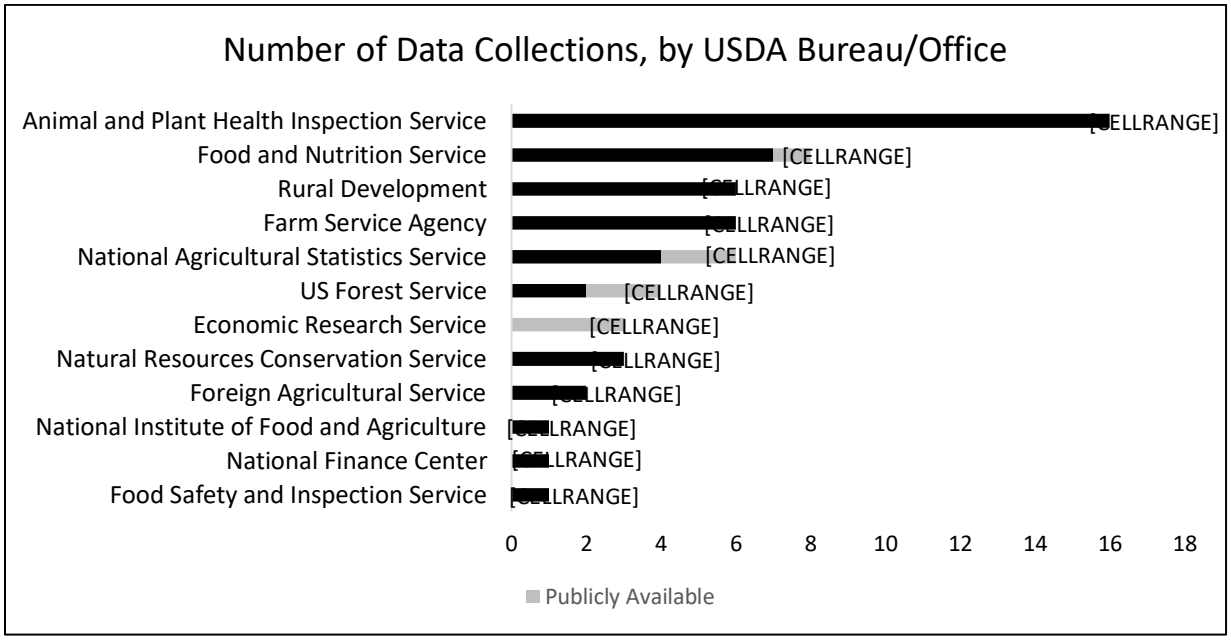

A breakout by EPA office is not available at this time. However, of the 48 data collections identified, 35 are publicly available. The EPA provides data on air and water quality, EPA facilities, and EPA grants. Many of these data are included in EPA's Envirofacts data product that includes topic searches on air, waste, facility, land, compliance, water, and radiation, available at the tribal level. These data can be viewed with a geographic interface using the Enviromapper data tool.

## Department of Agriculture

The U.S. Department of Agriculture (USDA) confirmed that the 54 data collections provided in the pre- populated collection form were correctly identified as containing AI/AN data. They did not provide further information including the geographic scope and accessibility.

Chart 3 shows the USDA Bureaus/Offices with highest number of AI/AN data collections are the Animal and Plant Health Inspection Service (APHIS) and the Food and Nutrition Service, followed by Rural Development, Farm Service Agency, National Agricultural Statistics Service, and the Economic Research Service. The majority of data collections identified contain administrative data on the numerous inspection, farm, food and nutrition, and rural development programs.

### Chart 3. Number of Data Collections, by USDA Bureau/Office

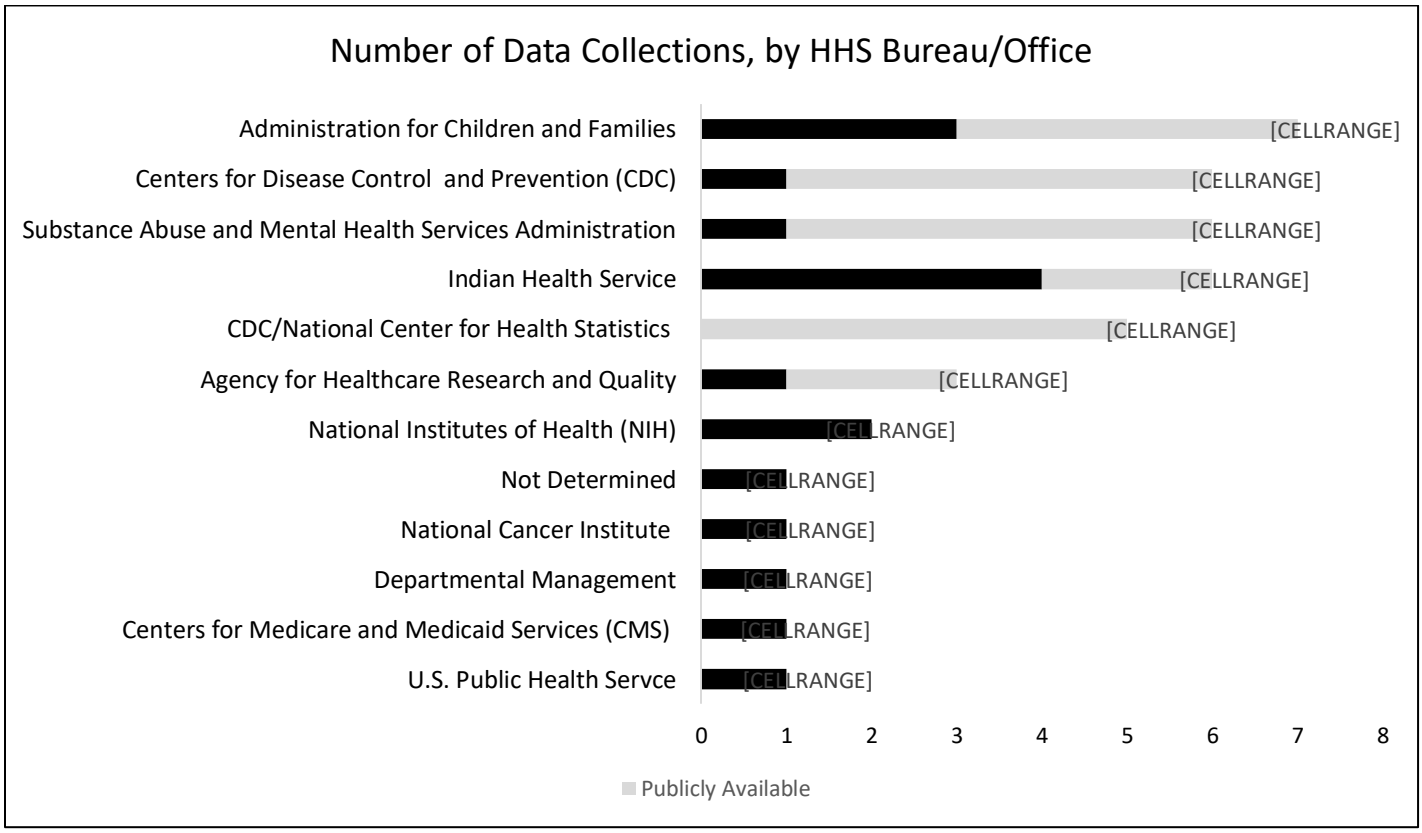

The inventory identifies eight publicly available data collections. The Food and Nutrition Service provides Women, Infants, and Children (WIC) Participation and Cost Data at the state and select tribal organization level. The Economic

Research Service has created two mapping tools: one that that can be used to estimate the percent of non-Hispanic Native Americans in the U.S. mapped by county and a spatial overview of food access indicators for low-income and other census tracts using different measures of supermarket accessibility. The USDA's National Agricultural Statistics Service conducts the Census of Agriculture every five years and is the only source of uniform, comprehensive agricultural data for every state and county or county equivalent, and for select reservations. The U.S. Forest Service also provides publicly available geospatial data on tribal lands ceded to the United States, and land fire potential vegetation.

## Department of Health and Human Services

The Department of Health and Human Services (HHS) identified data collections across ten different Bureaus/Offices, displayed in Chart 4. Of the 40 identified, 57.5% (23) are publicly available.

### Chart 4. Number of Data Collections, by HHS Bureau/Office

The Office with the highest number of data collections within HHS is the Administration for Children and Families (ACF), which collects data on the administration of two important government programs, the Head Start program and Temporary Assistance for Needy Families (TANF) programs. The TANF Reporting System allows the public to query and download TANF data at the state and tribal agency level, including estimates such as number of applicants and number of approved applicants. The ACF provides data on the Head Start program at the grantee/delegate level, including demographics on children and family, information on the Head Start workforce, and program characteristics in their annual Head Start Fact Sheets. ACF is also currently conducting a large descriptive study of AI/AN children in Head Start. The data collection is still ongoing, but a large dataset that researchers can access will be available.

The Centers for Disease Control and Prevention, along with the National Center for Health Statistics, collects and disseminates data on various health topics, including the National Immunization Survey, National Health Interview

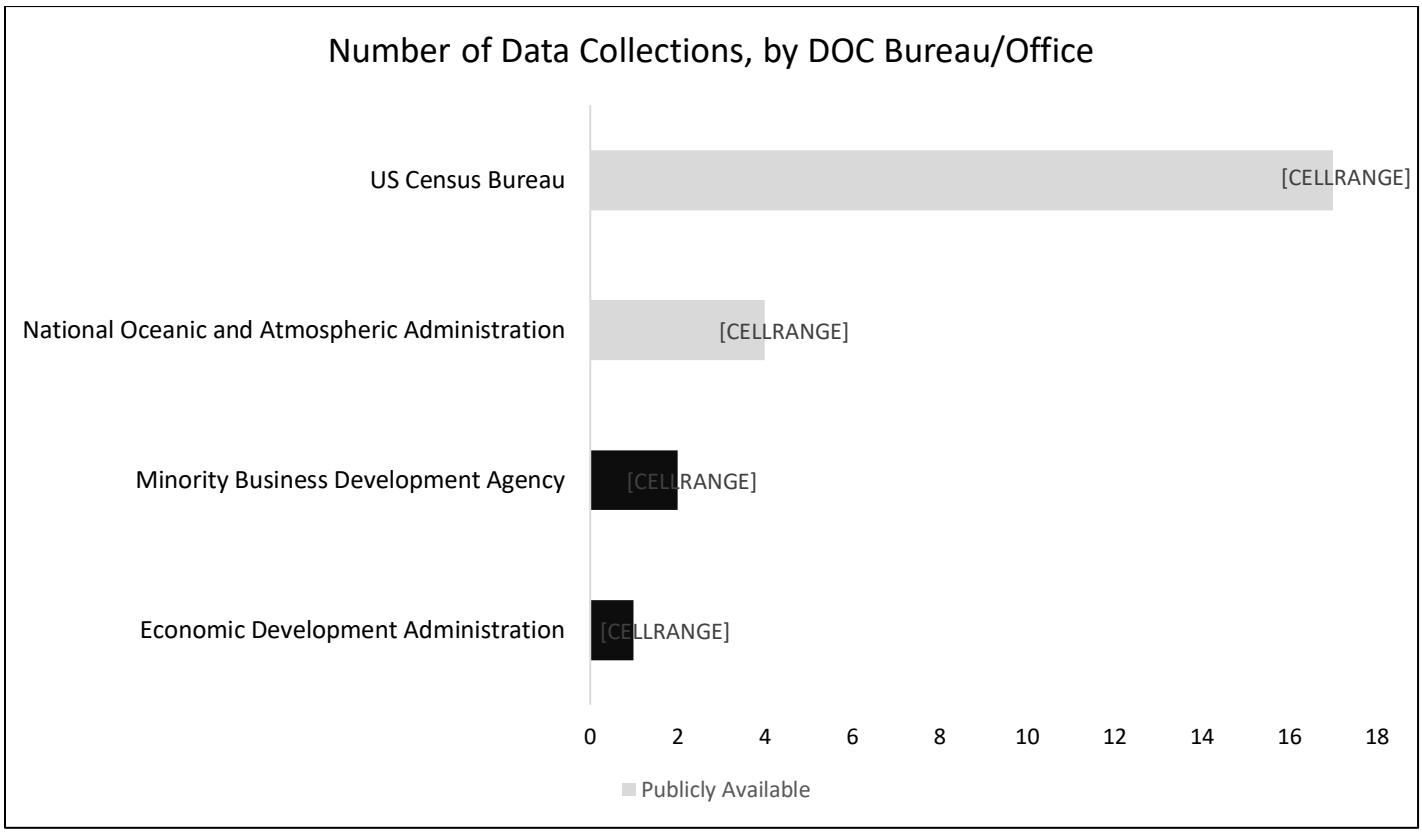

Survey, and the National Vital Statistics System, which provides public health data including birth, mortality, fetal death, and marriages and divorces data. Data available to the public can be accessed using the Center for Disease Control and Prevention's data tool, CDC Wonder, that allows users to query data for reports at the national, state, and regional level, and by race, including AI/AN.

The Indian Health Service (IHS) is the federal agency responsible for providing federal health services to American Indians and Alaska Natives. The inventory identifies six IHS data collections. The two publicly available data collections are facility mapping tools.

## The Department of Commerce

While the Department of Commerce (DOC) ranks fifth in the number of AI/AN data collections identified, it would most likely be first if one were to identify AI/AN topics by agency. Chart 5 shows Census has the highest number of identified data collections within the DOC, and is an important and widely used source of publicly available AI/AN data.

### Chart 5. Number of Data Collections, by DOC Bureau/Office

Census provides over 100 demographic, housing, economic, and social variables at the national, state, county, metropolitan, and tribal level as part of the American Community Survey (ACS). The inventory identifies 10 distinct ACS data collections including Estimates, Estimate Summary Files, and Public Use Microdata Sample (PUMS) files for 1-year, 3-year, and 5-year estimates. Higher level aggregates, such as the AI/AN population at the national and state level are available in the 1-year estimates, while the majority of tribe specific data are included in the 5-year estimates as smaller areas require 60 months of aggregate data to produce reliable estimates. Estimate summary files contain estimates, margins of error, and geography files for each release. Public Use Microdata Sample (PUMS) files are a set of

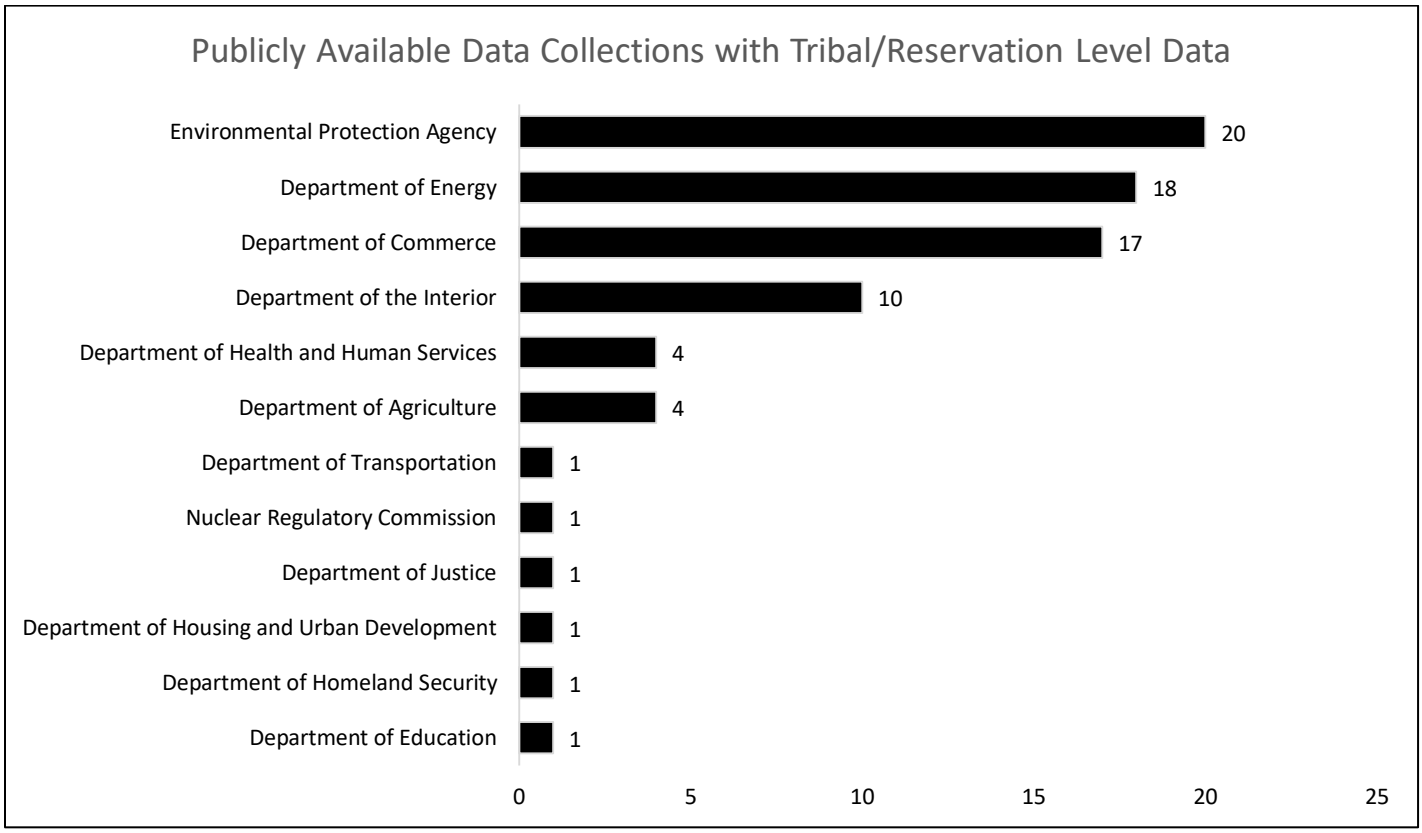

un-tabulated records about individual people or housing units that allow data users to create custom tables that are not available through pre-tabulated (or summary) ACS data products.

Census also provides population estimates at the national, state, county, and tribal level as part of the Decennial Census, and AI/AN owned business data estimates, including the number of firms, total sales, and annual payroll, at the national and state level through the Survey of Business Owners.
The inventory identifies four publicly available data collections from the National Oceanic and Atmospheric Administration (NOAA). However, it should be noted that NOAA did not review these identified collections. NOAA's data collections include Coastal Tribal Lands, Ocean Uses: Hawaii, Production Data - North Puget Sound Chinook salmon captive propagation, and Subsistence Registration Permit Program data collections.

## Publicly Available, Tribal Level Data Collections

The identified data collections include AI/AN data at the national, state, county, zip code, and tribal geographic levels. While all are important, data at the tribal or reservation level allows for better tribal level program management and measurement, and gives a better picture of the socio-economic conditions at the reservation level. A manual review of publicly available data collections identified 79 (40.5%) of the 195 publicly available datasets that include tribal level data. These data collections are identified with a * symbol next to "General Public" in the Accessibility column of the inventory. Chart 6 below shows the breakout of these data collections by agency.

### Chart 6. Publicly Available Data Collections with Tribal/Reservation Level Data

The agencies collecting the data provide some insight into the type of data available at the tribal level. The EPA and the DOE, for example, provide half of the identified data collections. The DOE's tribal level data collections include

information on renewable energy sources in Indian Country, including wind speeds, solar energy, biomass, and hydrothermal energy sources in their interactive mapping tools. The data also include locations of bioenergy, natural gas, petroleum, hydrothermal, and power plants. The EPA includes a tribal land geography layer in its Enviromapper tool that allows the user to view information on many of EPA's programs, including air, water, superfund sites, and hazardous waste. The EPA also includes many different geographic layers depicting tribal areas by region.

Seventeen data collections were identified that include reservation-level data for the Department of Commerce, which represents 70.8% of the DOC's datasets, and 100% of their publicly available datasets. The majority of these data come from Census and are included in the 5-year, 3-year, and 1-year ACS data sets. However, the 5-year data set is limited to populations over 60,000, which applies to very few reservation areas.

The Department of Justice provides one data collection, the Census of Tribal Justice Agencies, that includes information on the range of justice agencies operating in tribal jurisdictions, the services those agencies provide, and the types of information systems maintained at the tribal level. However, it has not been updated since 2002. Other data available at the tribal level include information on cultural items (DOI), tribal TANF programs (HHS), program office location and contact information, and tribes physically located within 50 miles of a nuclear power plant (National Regulatory Commission).

A review of publicly available datasets at the tribal/reservation levels show data gaps in the areas of reservation businesses, reservation financial sectors, tribal governments, and education. While there are publicly available data on AI/AN-owned businesses at the national, state, and county levels through The Survey of Business Owners (SBO), there are no business data available by reservation. GSA's SmartPay captures information on tribally owned businesses, including location information that would allow a user to flag businesses on reservations. However, this data are limited to tribally-owned federal agency vendors. With regard to reservation financial sectors, the Consumer Financial Protection Bureau's Home Mortgage Disclosure Tool provides mortgage lending information at the Census tract and county level, including demographic information on race, sex, and ethnicity, and financial information such as approval/denial, the denial reason, and loan type, but does not provide information at the reservation level. A review of the inventory showed no data collections that include information on tribal governments. The Department of Education's 2008 report titled, "Status and Trends in the Education of American Indians and Alaska Natives" does provide tribal level demographic information, but education statistics provided in the report are at the national and state levels.

It is important to note that tribal/reservation level collections were identified by PPA, and were not confirmed by the agencies. It is also important to note that some data collections may include a geographic feature such as an address or zip code that would allow the user to identify data attributed to a reservation or tribe. These data collections were not included in the above counts, as the user would have to geocode the available data. Data collections that include a limited amount of tribal/reservation level data are included in the above counts.

## Next Steps

The inventory characterizes existing federal AI/AN data by agency, accessibility, and tribal/reservation level availability. The next step is to make this tool available to other stakeholders. Tribes, researchers, and other federal agencies could utilize this tool to locate data, identify possible data linkages, identify other data gaps, and identify possible tribal and agency collaborations. In the long-term, this inventory could be enhanced to include information on the data quality and total coverage of identified data collections. While the inventory offers a view of what data are being collected, and by what agency, it does not provide information on the quality and coverage of data collections, which are important factors to consider for a complete characterization of a data collection.

## Endnotes

[1] Todd, Richard M. 2012. "Indian Country Economic Development: Data and Data Gaps." Research Paper. https://www.minneapolisfed.org/community/indian-country/events/~/media/Files/community/indiancountry/Todd_Data_and_Data_Gaps_Paper.pdf

[2] Payson, Steven. 2012. "The Challenge of Acquiring Economic Statistics on Indian Nations: Prospects for the Future." Department of the Interior Internal Draft for Review.

[3] Sampling errors, geographic and language barriers, and government distrust are but a few of the significant challenges identified in the literature to accurately counting the AI/AN population. The literature on AI/AN data availability is limited. Todd (2012) identified AI/AN data variables and sources used in over twenty studies that compared economic outcomes across reservations to summarize AI/AN demographic, business and financial, and land and government data and data gaps. Todd identified 274 variables from approximately 74 distinct data sources, including both federal and nonfederal sources. Using this 'inventory of information sources,' Todd (2012) found that three of the biggest data gaps are in the areas of tribal governments, reservation business activity, and longitudinal data on reservation residents and households. Todd identified only one study on reservation business activity, which relied on data from the Census's County Business Patterns (CPB) survey. Because CPB data is not available at the tribal level, the author had to "confront difficult decisions about how to crosswalk county data to the reservation level."
Data sources on reservation financial sectors are also limited, with only two sources identified, the Home Mortgage Disclosure Act, and dated BIA estimates of reservation credit. More sources are available for Indian Lands data, including Census, BIA, and USDA data sources, but Todd notes a data gap on more detailed land ownership information. Data sources available on tribal governments are the most limited, with no available sources identified, and none that are published by a federal agency. One exception is tribal government data on tribal casinos that are available in Inspector General Reports. These data gaps greatly impede evaluating AI/AN economic development and growth.

Todd (2012) found that Census collects the majority of AI/AN demographic data. This is not surprising, as the Census provides the most comprehensive data on the socio-economic conditions of the United States, and the only federal data collection that provides these data at the tribal level. Census data is also frequently used by federal agencies for needs assessments, funding, and appropriations. However, many tribes and tribal organizations have expressed concerns with the Census's American Community Survey (ACS) as a replacement to the Decennial Census 'long form' to capture these data, citing population undercounts and high margins of error compared to non-AI/AN estimates. DeWeaver (2012) found that ACS AI/AN alone population estimates were lower than comparable AI/AN alone population estimates in the 2010 Decennial Census at the national, reservation, and county levels.

DeWeaver (2012) identified four sources of federal labor market data: BIA's Labor Force Report (LFR), the ACS, the Bureau of Labor Statistics (BLS) Current Population Survey (CPS), and BLS's Local Area Unemployment Statistics (LAUS). The ACS and the LFR are the only sources that provide employment data at the reservation level. The LFR, released by the BIA, reports on the AI/AN population and employment by state, BIA region, and tribe. The last report was published in 2013, after an eight year reporting gap. The reports released prior to the 2013 report included estimates based on unknown methodologies, prompting quality concerns. Another issue with both the ACS and the most recent LFR is they do not capture "discouraged" workers, those who have given up looking for work and are not included in the BLS's or Census's definition of unemployed, which applies to many living on or near reservations, and can impede an accurate assessment of the labor market conditions of a reservation.

|---|---|---|---|---|---|---|---|---|
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-Animal Disease Traceability Information System (ADTIS) | Investment provides animal tracking for the purpose of protecting animal health. | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-National Animal Health Laboratory Network System (NAHLN) | The NAHLN serves as a repository of detailed laboratory information and animal health laboratory test data collected from state veterinary diagnostic laboratories nationwide, reducing the risk of animal disease outbreaks and facilitating rapid response. | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-Veterinary Services Process Streamlining (VSPS) | VSPS creates an electronic means of capturing, maintaining and analyzing information associated with the APHIS-VS regulatory activities for animal import/export/interstate monitoring and the Veterinary Accreditation Program. | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-Electronic Permits System (ePermits) | A comprehensive automated permit system encompassing APHIS regulatory import permit processes (includes PPQ, VS, and BRS). | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-Agricultural Quarantine Activity System (AQAS) | The AQAS is a consolidated investment of the WADS, PPQ280, AQIM, Pest ID and EAN investments. The system manages information about agricultural inspections, activities, detailed sampling, pest interceptions, and cargo EANs. | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-Commodity Treatment Information System (CTIS) | CTIS provides a distributed web-based system for storage, tracking, and reporting of data collected from quarantine treatments and related conveyances, and regulatory information targeted to particular quarantine treatment or treatment types. | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-Animal Care Information System | Animal Care (AC) Information System consists of licensing and registration, and horse protection sub-systems. | NR | NR | NR | NR | NR |
| Department of Agriculture | Animal and Plant Health Inspection Service | APHIS-User Fee System | The APHIS User Fee System provides an automated means to track and process the collection of user fees from clients for import/export services, veterinary diagnostics, agriculture quarantines inspection, and plant inspection. | NR | NR | NR | NR | NR |

|---|---|---|---|---|---|---|---|---|
| Department of Agriculture | Farm Service Agency | FSA-124 Service and Outreach to Agricultural Communities | This investment supports and enables enhancing, developing, and unifying customer- and agricultural community-focused service delivery IT solutions for agency staff to meet the needs of local agricultural communities in a holistic fashion. | NR | NR | NR | NR | NR |
| Department of Agriculture | Food and Nutrition Service | Women, Infants, and Children (WIC) Participating and Cost Data | This dataset contains monthly data for the current fiscal year for each WIC State agency. | General Public* | NR | http://www.fns.usda.gov/pd/wic-program | NR | NR |
| Department of Agriculture | Food and Nutrition Service | FNS-Women, Infants and Children (WIC) State Agency Model (WIC SAM) | This initiative is a process to support State development of model systems to support WIC program administration at the State level, and the transfer and implementation of a selected model system to individual states. There is no associated FNS system. | NR | NR | NR | NR | NR |
| Department of Agriculture | Food and Nutrition Service | FNS-Integrated Program Accounting System (IPAS) | Primary financial management system for managing FNS program funds. | NR | NR | NR | NR | NR |
| Department of Agriculture | Food and Nutrition Service | FNS-Electronic Benefit Transfer (EBT) -- Account Management Agent (AMA) | Resides at the Federal Reserve Bank in Richmond. Provides linkage between FNS and the U.S. Treasury ASAP System for payment of EBT transactions. | NR | NR | NR | NR | NR |
| Department of Agriculture | Food and Nutrition Service | FNS-Special Nutrition Programs and Administrative Support | This investment has under it various systems and processes which support FNS Special Nutrition Programs (SNP) and FNS Administrative Support. | NR | NR | NR | NR | NR |
| Department of Agriculture | Food and Nutrition Service | FNS-Food Programs Reporting | Supports administration and management of FNS' SNAP and Special Nutrition Programs by enabling State reporting on participation and benefits admin. It integrates the FNS program and financial data into an official database for controlled public release. | NR | NR | NR | NR | NR |
| Department of Agriculture | Food and Nutrition Service | FNS-Supplemental Nutrition Assistance Program (SNAP) Support | This investments consists of applications which provide support for the administration of the SNAP program - SNAP Quality Control System (SNAPCS), Electronic Disqualified Recipient System (eDRS), and SNAP Workflow and Information Management (SWIM). | NR | NR | NR | NR | NR |

| Agency | Bureau | Name of Data or Program | Data Description | Access | Access Other | Link | Contact Name | Contact Email |
|---|---|---|---|---|---|---|---|---|
| Department of Agriculture | Food Safety and Inspection Service | FSIS-Public Health Information System (PHIS) | PHIS has four components. Domestic inspection, Import Reinspection, Export Certification and Predictive Analytics. | NR | NR | NR | NR | NR |
| Department of Agriculture | Foreign Agricultural Service | FAS-Food Aid Information System (FAIS) | Will handle program administration for USDA/FAS food aid programs. Will include interfaces to related systems used by USAID and FSA to develop comprehensive cross-program reporting capability. Supports Grants.gov and PMA Reform Food Aid, & Egov. | NR | NR | NR | NR | NR |
| Department of Agriculture | Foreign Agricultural Service | FAS-Global Crop Production Intelligence System (GCPIS) | Primary source of global agricultural intelligence for USDA and the US Government. The GCPIS integrates analysis of satellite imagery, agro-meteorology, and crop modeling to provide timely, unbiased information on crop conditions and production. | NR | NR | NR | NR | NR |
| Department of Agriculture | National Agricultural Statistics Service | Census of Agriculture | The census of agriculture provides a detailed picture of U.S. farms and ranches every five years. It is the only source of uniform, comprehensive agricultural data for every State and county or county equivalent. | General Public* | NR | https://www.nass.usda.gov/Statistics_by_Subject/Demographics/ | NR | NR |
| Department of Agriculture | National Agricultural Statistics Service | Quick Stats Agricultural Database | Quick Stats is the National Agricultural Statistics Service's (NASS) online, self-service tool to access complete results from the 1997, 2002, 2007, and 2012 NASS. | General Public | NR | https://www.nass.usda.gov/Quick_Stats/ | NR | NR |
| Department of Agriculture | National Agricultural Statistics Service | NASS-Data and Applications | NASS Data and Applications investment supporting survey and census statistical programs. | Non-public | Only Employees at the Office Responsible for Collecting the Data | NR | NR | NR |
| Department of Agriculture | National Agricultural Statistics Service | NASS-Geospatial Research | NASS uses geospatial satellite and aerial data to support NASS survey and Census of Agriculture programs. NASS also uses these data for the popular Cropland Data Layer and to help monitor crop conditions during the growing season. | NR | NR | NR | NR | NR |
| Department of Agriculture | National Finance Center | Tribal Insurance Processing System (TIPS) | TIPS is an enrollment and premium collection system. Tribal employers use TIPS to enter enrollment information for their employees. TIPS is only accessible by certain designated HR personnel from each tribal employer. It is not an "open" system that allows individual employees to enter enrollment information. | Limited Non-Federal Access | NR | NR | NR | NR |

|---|---|---|---|---|---|---|---|---|
| Department of Commerce | National Oceanic and Atmospheric Administration | Ocean Uses: Hawaii (PROUA) | This Pacific Regional Ocean Uses Atlas (PROUA) Project is an innovative partnership between NOAA and the Bureau of Ocean Energy Management (BOEM) designed to document where coastal communities in Hawaii use the ocean across a full range of typical human activities and sectors. Using participatory mapping techniques, the project offers a proven, flexible, and scalable approach allowing coastal communities to consider an accurate account of human use for ocean planning. Tribal uses of the ocean were not mapped explicitly, though tribal chairs and/or their designated representatives were formally invited by BOEM to participate in the mapping workshops. The sharing of tribal use information was dependent upon each tribe's determination of whether the mapping workshops were an appropriate forum for sharing such information. Any tribal use information shared during the workshops was incorporated into the defined use categories. Thus, the atlas data and map products do not explicitly depict tribal use. For more information on the project, please visithttp://marinecadastre.gov/oceanuses/. | General Public | NR | https://data.noaa.gov/dataset/ocean-uses-hawaii-proua | NR | NR |
| Department of Commerce | National Oceanic and Atmospheric Administration | Production Data - North Puget Sound Chinook salmon captive propagation | NOAA Fisheries is a cooperator with the Washington Department of Fish and Wildlife and the Lummi, Nooksack, and Stillaguamish Tribes in a 10-year program to rebuild the South Fork Nooksack River spring Chinook and Stillaguamish River fall Chinook stocks through a captive broodstock program. Information on the number of juveniles received into the program is maintained and summarized by year. The production of prespawning adults transferred to Tribal Facilities for spawning is also annually summarized. | General Public* | NR | https://data.noaa.gov/dataset/production-data-north-puget-sound-chinook-salmon-captive-propagation | NR | NR |
| Department of Commerce | National Oceanic and Atmospheric Administration | Subsistence Registration Permit Program | Management of the Alaska halibut fishery is based on an international agreement between Canada and the United States and is given effect by the Northern Pacific Halibut Act of 1982. Before fishing under the subsistence halibut regulations, fishermen must obtain a Subsistence Halibut Registration Certificate (SHARC). Special permits for community harvest, ceremonial, and educational purposes also are available to qualified Alaska communities and Alaska Native Tribes. Permit holders must comply with SHARC registration and reporting processes. | General Public | NR | https://alaskafisheries.noaa.gov/fisheries/subsistence-halibut#SHARC | NR | NR |

| Department of Education | National Center for Education Statistics | Digest of Education Studies | The primary purpose of the Digest of Education Statistics is to provide a compilation of statistical information covering the broad field of American education from prekindergarten through graduate school. The Digest includes a selection of data from many sources, both government and private, and draws especially on the results of surveys and activities carried out by the National Center for Education Statistics (NCES). To qualify for inclusion in the Digest, material must be nationwide in scope and of current interest and value. The publication contains information on a variety of subjects in the field of education statistics, including the number of schools and colleges, teachers, enrollments, and graduates, in addition to educational attainment, finances, federal funds for education, libraries, and international education. Supplemental information on population trends, attitudes on education, and education characteristics of the labor force, government finances, and economic trends provides background for evaluating education data. | General Public | NR | http://nces.ed.gov/programs/digest/index.asp | Thomas D. | Department of Energy | Office of Energy Efficiency and Renewable Energy | Weatherization Assistance Program | The U.S. Department of Energy's Weatherization Assistance Program (WAP) was created in 1976 to assist low-income families who lacked resources to invest in energy efficiency. WAP is operated in all 50 states, the District of Columbia, Native American tribes, and U.S. Territories. The energy conservation resulting from the efforts of state and local agencies helps our country reduce its dependence on foreign oil and decrease the cost of energy for families in need while improving the health and safety of their homes.<br>This dataset contains a link to the WAPTAC website, which contains a 'virtual' library of all rules, regulations, policies and procedures required by DOE's weatherization program. The site is a central repository for presentation materials, photos and videos of work in progress, site demonstrations, news articles, and other documentation to support WAP operations. WAPTAC.org serves as the institutional memory of the Program. | Limited Non-Federal Access | Contact Information | NR | NR | NR |
| Department of Energy | Office of Indian Energy Policy and Programs | Renewable energy datasets for wind at 20m and 50m | wind speed, capacity factor, and wind class at 20meter and 50 meter hub heights | General Public* | NR | https://maps.nrel.gov/ | NR | NR |

| Department of Health and Human Services | National Cancer Institute | The Health Information National Trends Survey (HINTS) | The Health Information National Trends Survey (HINTS) data collection program was created to monitor changes in the rapidly evolving field of health communication. Questions on the HINTS survey include topics such as health communication with doctors, obtaining information from the media, knowledge of cancer and screening behavior, primary cancer risk behaviors, and respondent characteristics. HINTS data were collected in 2003 and 2005. Uses of the data include: (a) extending cancer communication research from the laboratory to the population, (b) monitoring the populations use of new media (e.g., and specifically the Internet), (c) documenting the publics progress in accurate knowledge related to cancer and chronic disease prevention, and (d) stimulating cross-branch cooperation. | NR | NR | http://hints.cancer.gov/ | NR | NR |
| Department of Health and Human Services | National Institutes of Health (NIH) | Health and Retirement Study | The Health and Retirement Study (HRS) is a longitudinal panel study that surveys a representative sample of more than 26,00NR Americans over the age of 50 every two years. The HRS explores the changes in labor force participation and the health transitions that individuals undergo toward the end of their work lives and in the years that follow. The study has collected information about income, work, assets, pension plans, health insurance, disability, physical health and functioning, cognitive functioning, and health care expenditures. | NR | NR | http://hrsonline.isr.umich.edu/ | NR | NR |
| Department of Health and Human Services | National Institutes of Health (NIH) | National Children's Study | The National Children's Study (NCS) will examine the effects of the environment, as broadly defined to include factors such as air, water, diet, sound, family dynamics, community and cultural influences, and genetics on the growth, development, and health of children across the United States, following them from before birth until age 21 years. The goal of the Study is to improve the health and well-being of children and contribute to understanding the role various factors have on health and disease. Findings from the Study will be made available as the research progresses, making potential benefits known to the public as soon as possible. | NR | NR | https://www.nichd.nih.gov/research/ncs/Pages/default.aspx | NR | NR |
| Department of Health and Human Services | Substance Abuse and Mental Health Services Administration | Prevention Strategies Inventory (PSI) State/Tribal | The PSI dataset contains information about the types of strategies that GLS grantees are implementing as part of their suicide prevention activities. | General Public | NR | https://www.suicideprevention-datacenter.com/spdc/login/login.cfm | NR | NR |

| Department of Justice | Bureau of Justice Statistics | Annual Survey of Jails in Indian Country | The Annual Survey of Jails in Indian Country (SJIC) includes all Indian country correctional facilities (adult and juvenile) operated by tribal authorities or the Bureau of Indian Affairs (BIA), U.S. Department of the Interior. Core SJIC items include admissions, releases, confinement counts, average daily population, and the most serious criminal offense for which the offender was being held. It also asks about the operation and staffing of Indian country jails. It is also captures the total number of Indian country jail inmates dying in custody. While the survey asks for total death counts, respondents are not asked to submit individual-level death forms. Periodically, BJS conducts an addendum to the survey that captures facility level information on inmate medical and mental health services, suicide prevention strategies, substance dependency programs, domestic violence counseling, sex offender treatment, educational programs, and inmate work assignments. The last addendum was in 2011. | General Public | NR | (1) BJS: http://www.bjs.gov/index.cfm?ty=dcdetail&iid=276; (2) National Archive of Criminal Justice Data: http://www.icpsr.umich.edu/icpsrweb/NACJD/series/00158 | Todd D. | Department of Labor | Bureau of Labor Statistics | Current Population Survey | Monthly labor force survey of approximately 60,00NR households that is the source of the unemployment rate and other key labor market indicators. Data on race and ethnicity are collected, as well as a variety of other demographic characteristics, including age, sex, educational attainment, veteran status, disability status, nativity, and marital status. One of the race categories collected is "American Indian and Alaska Native"; no information is collected on Indian Tribal affiliation. A small number of AI/AN estimates are published annually, but AI/AN sample sizes are generally too small for detailed demographic or geographic breakdowns. | General Public | NR | Published data available in annual report at http://www.bls.gov/opub/reports/race-and-ethnicity/archive/labor-force-characteristics-by-race-and-ethnicity-2014.pdf, Microdata files available for researcher use at http://thedataweb.rm.census.gov/ftp/cps_ftp.html | Dori Allard | allard.dorinda@bls.gov |
| Department of Labor | Bureau of Labor Statistics | American Time Use Survey | Survey that provides information about how Americans spend their time. Survey respondents' race and ethnicity were previously collected in the Current Population Survey. "American Indian and Alaska Native" is one of the race groups collected; there is no information on Indian Tribal affiliation. The AI/AN sample sizes are too small to generate reliable annual estimates, but microdata files are made available for researcher use, and multiple years of data may be pooled. | General Public | NR | Microdata files available for researchers at http://www.bls.gov/tus/data.htm | Dori Allard | allard.dorinda@bls.gov |

| Department of the Interior | Assistant Secretary-Indian Affairs | 638 Pay Costs | Tribal Pay Cost Data | Non-public | Only Employees of the Office Responsible for Collecting the Data | NR | Chris Miskovich | Christopher.Miskovich@bia.gov |
| Department of the Interior | Assistant Secretary-Indian Affairs | Program Performance Information for Tribes operating Tribal Transportation Program under Title IV of P.L. 93-638 | FAST Act Tribal Transportation Program Performance Management Activities | Non-public | Only Employees of the Office Responsible for Collecting the Data | NR | Robert Sparrow | Robert.Sparrow@dot.gov |
| Department of the Interior | Assistant Secretary-Indian Affairs | Tribal Transportation Program Financial Status Report | FAST Act Tribal Transportation Program Expenditures for projects on the Tribe's approved Transportation Improvement Plan | Non-public | Only Employees of the Office Responsible for Collecting the Data | NR | Robert Sparrow | Robert.Sparrow@dot.gov |
| Department of the Interior | Assistant Secretary-Indian Affairs | Non-Recurring Project Funding Awards | Tribal Accomplishment Reports for Non-Recurring Project Funding Awards (for example, Criminal Investigations/Police Service; Tribal Courts; Rights Protection; Tribal Management/Development; Water Management, Planning, and Pre-Development; Endangered Species; Noxious Weed Eradication; Forestry; Forestry Development; Minerals & Mining; Water Rights Negotiation/Litigation; Litigation Support; Attorney Fees; Real Estate Service Projects; Environmental Quality Projects; and Climate Change) | Non-public | Only Employees of the Office Responsible for Collecting the Data | NR | BIA Region Program Staff | NR |
| Department of the Interior | Bureau of Indian Affairs | TAAMS | TAAMS is the "System of Record" for the Office of Trust Services and contains the most complete and up to date data available on Indian trust land. TAAMS contains data on trust land, Fee land and Restricted for both Title and Beneficial interest types both on and off reservation. The BIA TAAMS System does not track Tribal or Feel land, it tracks "Individual Indian land interests". BIA tracks Tribal land only when there is both individual Indian and Tribal ownership on the same tract of land. Data on "leases" is maintained in TAAMS for Forestry, Surface (Homestead, Commercial), Rights of ways, Range, and Minerals. TAAMS generates invoices, records payments, etc. | Limited Non-Federal Access | Government employees who are responsible for trust functions and tribal employees who may have contracted or compacted a Government Trust function. | NR | NR | NR |

| Department of the Interior | National Park Service | Summaries Database (National NAGPRA) | A NAGPRA Summary is an itinerary of unassociated funerary objects, sacred objects and objects of cultural patrimony that are housed museum or federal agency collections. Each record contains the name of the tribe(s) receiving a copy of a summary from a museum or Federal agency. Corrections, updates, and additions to this database will be made as museums and agencies continue to verify the data that have been entered, or submit revised summaries. | General Public* | NR | http://grantsdev.cr.nps.gov/Nagpra/Summaries/default.cfm | Mariah Soriano | mariah_soriano@nps.goc |
| Department of the Interior | National Park Service | Culturally Unidentifiable (CUI) Native American Inventories Database (National NAGPRA) | The Culturally Unidentifiable Native American Inventories Database is a compilation of data from museums and Federal agencies from various geographic areas of the United States. Each record contains the name of the museum or Federal agency in possession or control of the human remains; the state, county, and site, if known, from which the human remains were removed; the collection identification number if given; the minimum number of individuals (MNI); and the number of associated funerary objects (AFO). | General Public* | NR | http://grantsdev.cr.nps.gov/Nagpra/CUI/ | Mariah Soriano | mariah_soriano@nps.goc |
| Department of the Interior | National Park Service | Culturally Affiliated (CA) Native American inventories Database (National NAGPRA) | The Culturally Affiliated Native American Inventories Database is a transmission for public use of data from museums and Federal agencies that have NAGPRA compliance obligations. Many of the Native American human remains described here have been culturally affiliated as a result of consultation with tribes and Native Hawaiian organizations. Each record contains the name of the museum or Federal agency in possession or control of the human remains; the state, county, and site, if known, from which the human remains were removed; the collection identification number if given; the minimum number of individuals (MNI); and the number of associated funerary objects (AFO). | General Public* | NR | http://grantsdev.cr.nps.gov/Nagpra/CAI/ | Mariah Soriano | mariah_soriano@nps.goc |

| Department of the Interior | U.S. Geological Survey | U.S. Geological Survey 2010 Petroleum Resource Assessment of the National Petroleum Reserve in Alaska (NPRA): GIS Play Maps | The 2010 updated assessment of NPRA evaluated each of the 24 plays based on the availability of new geologic data available from exploration activities and scientific research. Quantitative assessments were revised for 11 plays, and no revisions were made for 9 plays. Estimates of the volume of technically recoverable, undiscovered oil and no associated gas resources in these 20 plays are reported elsewhere (Houseknecht and others, 2010). The NPRA assessment study area includes Federal and Native onshore land and adjacent State offshore areas. A map showing the areal extent of each play was prepared by USGS geologists as a preliminary step in the assessment process. Boundaries were drawn on the basis of a variety of information, including seismic reflection data, results of exploration drilling, and regional patterns of rock properties. Play boundary polygons were captured by digitizing the play maps prepared by USGS geologists. | General Public | NR | http://catalog.data.gov/dataset/u-s-geological-survey-2010-petroleum-resource-assessment-of-the-national-petroleum-reserve-in-a | NR | NR |
| Department of the Interior | U.S. Geological Survey | USGS - WAT - National Water Information System (NWIS) | NWIS provides acquisition, processing, storage and dissemination of water resource data essential to USGS partners in local, state, tribal, and Federal governments - and includes data from over a million US sites - with both long-term and real-time data. | General Public | NR | http://waterdata.usgs.gov/nwis | NR | NR |

| Environmental Protection Agency | NR | American Indian Areas Located in Region 2 (CENSUS.AM_INDIAN_AREAS_R2) | There are both legal and statistical American Indian, Alaska Native, and native Hawaiian entities for which the U.S. Census Bureau provides data for Census 200NR. The legal entities consist of federally recognized American Indian reservations and off-reservation trust land areas, the tribal subdivisions that can divide these entities, state recognized American Indian reservations, Alaska Native Regional Corporations, and Hawaiian home lands. The statistical entities are Alaska Native village statistical areas, Oklahoma tribal statistical areas, tribal designated statistical areas, and state designated American Indian statistical areas. Tribal subdivisions can exist within the statistical Oklahoma tribal statistical areas. In all cases, these areas are mutually exclusive in that no American Indian, Alaska Native, or Hawaiian home land can overlap another tribal entity, except for tribal subdivisions, which subdivide some American Indian entities, and Alaska Native village statistical areas, which exist within Alaska Native Regional Corporations. In some cases where more than one tribe claims jurisdiction over an area, the U.S. Census Bureau creates a joint use area as a separate entity to define this area of dual claims. This data layer includes the boundaries for the American Indian entities in EPA Region 2. | General Public* | NR | https://catalog.data.gov/dataset/american-indian-areas-located-in-region-2-census-am-indian-areas-r2 | NR | NR |

| Environmental Protection Agency | NR | EPA Region 1 Environmentally Sensitive Areas | This coverage represents polygon equivalents of environmentally sensitive areas (ESA) in EPA Region I. ESAs were developed as part of an EPA headquarters initiative based on reviews of various regulatory and guidance documents, as well as phone interviews with federal/state/local government agencies and private organizations. ESAs include, but are not limited to, wetlands, biological resources, habitats, national parks, archaeological/historic sites, natural heritage areas, tribal lands, drinking water intakes, marinas/boat ramps, wildlife areas, etc. | General Public | NR | https://catalog.data.gov/dataset/epa-region-1-environmentally-sensitive-areas | NR | NR |
| Environmental Protection Agency | NR | EPA Region 1 Tribal Lands | This is a dataset of Tribal/Native American lands in the New England region. EPA notes that there are some disputes over the exact boundaries of the territories of the Maine Indian tribes. The data layer which identifies tribal lands in New England is not meant to announce the Federal Government's final position as to any of those disputes; EPA's use of this data layer is not a formal delineation of the Maine Indian tribes' reservations or trust lands; and circulation of this data layer is not a final Agency action concerning any of the disputes over these boundaries. The Agency has simply attempted to collect readily available information about the location of tribal lands so that EPA employees can focus their preliminary inquiries about environmental issues in and around tribal lands in New England. | General Public* | NR | https://www.epa.gov/tribal/indian-lands-us-epa-region-1 | NR | NR |

| Environmental Protection Agency | NR | EPA Region 9 designated areas and 2012-2014 design values | Designated Areas - as of October 1, 2015. A designation is the term EPA uses to describe the air quality in a given area for any of six common air pollutants known as criteria pollutants. After EPA establishes or revises a primary and/or secondary National Ambient Air Quality Standard (NAAQS), the Clean Air Act requires EPA to designate areas as â??Attainment?? (Meeting), â??Nonattainment?? (Not meeting), or â??Unclassifiable?? (Insufficient data) after monitoring data are collected by state, local and tribal governments. Once nonattainment designations take effect, the state and local governments have three years to develop implementation plans outlining how areas will attain and maintain the standards by reducing air pollutant emissions. Air Quality Systems (AQS) 2012-2014 Design Value Data - as of October 1, 2015. A design value is a statistic that describes the air quality status of a given location relative to the level of the National Ambient Air Quality Standards (NAAQS). | General Public* | NR | https://www3.epa.gov/region09/air/maps/r9_tribe.html | NR | NR |

|---|---|---|---|---|---|---|---|---|
| Environmental Protection Agency | NR | SoR - System of Registries | The System of Registries provides identification information for objects of interest to EPA, National Environmental Information Exchange Network trading partners including states and tribal entities, and the public. | General Public* | NR | https://ofmpub.epa.gov/sor_internet/registry/sysofreg/home/overview/home.do | NR | NR |
| Environmental Protection Agency | NR | ACRES-Assessment Cleanup and Redevelopment Exchange System | The ACRES database tracks environmental information at brownfields properties including the type, status of environmental assessment, cleanup activities, the presence and remediation of contaminants. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | NR | EIMS-Environmental Information Management System | Metadata system providing information concerning the Agency's science activities and products to outside stakeholders. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | NR | GRTS - Grants Reporting and Tracking System | The Grants Reporting and Tracking System (GRTS) is the primary tool for management and oversight of the national Nonpoint Source (NPS) Pollution Control Program. GRTS enables EPA and States to report on the accomplishments achieved with NPS grants funds. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | NR | CRWUF-Climate Ready Water Utilities Framework | The Climate Ready Water Utilities Framework (CRWUF) developed under EPA s Climate Ready Water Utilities initiative, assists drinking water, wastewater, and storm water utility owners and operators in assessing risks to utility assets and operations. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | OAR/OAQPS | AQS DataMart | Provides external access to the most commonly used air quality measurements collected by EPA. | General Public | NR | https://www.epa.gov/outdoor-air-quality-data | Nick Mangus | mangus.nick@epa.gov |
| Environmental Protection Agency | NR | IGMS - Integrated Grants Management System | IGMS is EPA's grants management system. The system reduces the time to award grants, increases information access for decision-making, streamlines internal processes, and supports grants management activities for all stages of the business process. | NR | NR | NR | NR | NR |

|---|---|---|---|---|---|---|---|---|
| Environmental Protection Agency | NR | NHD/RAD - National Hydrography Dataset/Reach Address Database | A geographic database that interconnects and uniquely identifies the stream segments or "reaches" that comprise the nation's surface water drainage system serving as a framework for integrating water databases. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | NR | ScienceHub | ScienceHub a central repository for research data throughout the life of a project and makes publically available non-sensitive metadata, study data, and study materials to other federal agencies and the general public. | General Public | NR | NR | NR | NR |
| Environmental Protection Agency | NR | CIMC - Cleanups In My Community | The system is a web application that enables integrated access through maps, lists and a search capability to site-specific information EPA has across all cleanup programs. Maps show the sites in context with related data - both EPA and non-EPA. | General Public* | NR | https://www.epa.gov/cleanups/cleanups-my-community | NR | NR |
| Environmental Protection Agency | NR | DWINS- Drinking Water Infrastructure Needs Survey | DWINS is a database used to house and analyze responses from the quadrennial Drinking Water Infrastructure Needs Survey mandated by the Safe Drinking Water Act. The data are used to develop the formula for allocating grants to public water systems. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | NR | Envirofacts - Envirofacts Information Warehouse | Envirofacts Information Warehouse provides the public with a textual and geographic interface into Envirofacts data. Envirofacts includes information from a variety of EPA programs, including air, water, superfund, and hazardous waste. | General Public* | NR | https://www3.epa.gov/enviro/ | NR | NR |
| Environmental Protection Agency | NR | CWNS - Clean Watersheds Needs Survey | Stores information about Publicly Owned Treatment Works (POTWs), Storm Water (SW) management programs, and Nonpoint Source (NPS) pollution control programs and projects that are eligible for funding under Clean Water State Revolving Funds. | NR | NR | NR | NR | NR |
| Environmental Protection Agency | NR | GeoPlatform | The EPA Geospatial Platform provides users with a comprehensive set of cloud-based Geographic Information System (GIS) services that enable them to easily create web-based maps, perform environmental analyses, and share their work using online tools. | NR | NR | NR | NR | NR |
