How Americans Think About Health Care and Insurance *

Beatrice Ferrario Stefanie Stantcheva

July 15, 2025

[FIRST DRAFT: COMMENTS VERY WELCOME!]

Abstract

This paper explores public perceptions and understanding of health insurance policies, along with the key factors influencing support for different health insurance systems. Drawing on a large-scale survey of U.S. residents, we examine attitudes toward critical dimensions such as redistribution preferences, efficiency costs, and equity considerations that shape policy support. The study delves into individuals' first-order considerations, their knowledge of Medicaid, Medicare, and employer-based coverage, and their overall grasp of health insurance mechanisms — assessing how these elements collectively drive policy preferences. We focus on the role of political ideology in shaping attitudes toward health insurance policies. Our findings indicate significant partisan divides, with Democrats prioritizing equity and Republicans emphasizing cost concerns. These insights contribute to the broader discourse on health policy design and the challenges of fostering informed public opinion on the complexity of health insurance policy.

1 Introduction

Access to good health care is essential for both people and society, and having health insurance is a critical matter for millions of Americans. In the United States, where health care spending makes up more than 18% of GDP and many people are still uninsured, it is important to understand how people view health insurance to guide better policy decisions. In this paper, we shed light on two questions. How do people perceive and understand health insurance policies and what factors shape their support for health insurance policies?

Economists study both the positive and negative behavioral and efficiency effects from increasing health insurance coverage. Immediate positive effects may include less crowding in the emergency room for non-emergency conditions that are better treated by a primary care provider or specialist, and higher use of the recommended preventive care (e.g., immunizations or screenings at the recommended frequency). More generous health insurance could improve health overall, which could in turn have positive effects on the economy. More preventive care may on balance reduce overall health costs if medical problems are caught early or if it prevents the spread of infectious diseases. Moreover, there are broader implications of health insurance beyond simple health outcomes. First, labor market concerns are intrinsically tied to health insurance since around 49% of Americans are insured through their employer. The "job-lock" effect from health insurance linked to one's employer – i.e., the difficulty in switching jobs for fear of losing one's health insurance or receiving worse coverage through the new employer–has been shown to exist (Madrian, 1994). Second, if lack of health insurance causes financial stress on low-income households, there may be broader ramifications due to the suboptimal decisions made to deal with these financial shocks. Third, there could be overuse of medical care in response to more generous health insurance. Do people view these issues in the same light as economists do?

To dive into people's understanding and perceptions of the health insurance system, we design and implement two large-scale Social Economics surveys and experiments on a representative sample of the U.S. population in 2019 and 2025. The questions in the survey are designed to elicit not only respondents' factual knowledge about the healthcare system and health insurance policies, but also their understanding of the mechanisms at play and its efficiency and distributional implications. We also extract people's first-order considerations that come to mind when they are prompted to think about health insurance and its goals or shortcomings. To avoid priming respondents about a particular effect or another, this is done primarily through open-ended questions, which are subsequently evaluated through text analysis methods.

The survey questions attempt to capture the nuances involved in the debates about health insurance in the US. For instance, people may assess different types of conditions or care (e.g., maternity-related services versus specialist non-essential care) differently. In particular, coverage for family planning services such as birth control or abortion-related services can be sensitive issues. In addition, there is the question of whether individuals should be required to have health insurance (i.e. whether there should be an individual mandate for health insurance) so as to avoid both individual behavioral failures and negative social spillovers from lack of insurance. Distributional and fairness considerations could also play a role in personal reasoning regarding healthcare and have to be balanced against the efficiency costs of health insurance. In the survey, individuals can express views on whether it is justifiable to discriminate based on certain personal charac-

teristics such as e.g. age, gender, or pre-existing conditions; whether worse health is the outcome of mostly individual actions or rather a matter of bad luck; and whether it is fair to help low-income households afford their health insurance. All these views ultimately determine whether respondents are satisfied with the current health system, whether they support a "Medicare-for-all"-type universal health insurance, whether low-income households' premiums should be subsidized, whether Medicaid or Medicare should be expanded, and how much coverage they believe should exist for different types of situations and health conditions.

Furthermore, in the 2019 survey, we randomized the formulation of many of the questions in each survey. The same root question is asked in two different ways: generic and impersonal (e.g., "If health insurance were to be made more generous, to what extent would it encourage people to make less use of the emergency room for conditions that do not warrant it?"). The second phrasing is specifically about women ("If health insurance were to be made more generous, to what extent would it encourage women to make less use of the emergency room for conditions that do not warrant it?"). The goal is to elicit whether respondents think differently about a generic person versus women, but without asking the same person different versions of the same question.[1]

Importantly, to better understand how respondents learn and how the presentation of a policy affects perspectives, we show different subsamples of randomly selected respondents instructional videos that explain the workings and consequences of health insurance policy from different perspectives. In the 2019 experiment, we focus on providing generic information about health insurance (without specifically referencing programs in the U.S.), from three different perspectives. The "Distributional" perspective focuses on the distributional consequences of health insurance, while the "Efficiency" perspective zeroes in on the efficiency costs. Finally, the "Economist" perspective presents issues in light of trade-offs, combining both of the previous perspectives. Figures A-4-A-6 show screenshots taken from the video treatment. The randomization allows us to estimate the causal effects of the information provided.

In the 2025 experiment, we instead explain to respondents how two specific government policies– Medicare and Medicaid– work and what their benefits are. One treatment branch sees a video on Medicare, the other one on Medicaid.

Our main findings are as follows. First, in the open text part, when respondents are left to freely write about their main considerations on the issue, "costs" are by far the biggest concern across the board. The driving factor behind the cost concern diverged along party lines, with Democrats worrying more about the affordability for everyone and Republicans focusing on the costs of existing health plans, regardless of coverage. Coverage is a main concern mainly on the left. Second, there is widespread agreement about the benefits of more health insurance: respondents generally believe that higher coverage rates would increase preventative care use, decrease emergency room activity, and reduce job-lock. Although there are clear partisan gaps, on the whole, respondents believed that more health insurance coverage would lead to better overall health, less spread of contagious diseases, and that, to a large extent, health outcomes are outside of one's control. There is much more disagreement about whether low-income households should be helped to afford health insurance.

[1] We also had a third phrasing, which we do not focus on here, namely focused directly on the respondent themselves ("If health insurance were to be made more generous, to what extent would it encourage you to make less use of the emergency room for conditions that do not warrant it?").

Third, policy views, such as support for a single-payer insurance system or expanded coverage, tend to be highly polarized. Democrats want increased access to healthcare and indicate dissatisfaction with the current health insurance system, believing it to be unfair. Republicans find it less unfair for women than for men to pay more for health insurance if their health is worse or if they have pre-existing conditions (Democrats do not make gender-based distinctions on this issue). There is significant disagreement regarding how generously certain services should be covered, with most of these centering around maternity, family planning, and women's health. On these issues, gender is subordinate to political affiliation: Republicans tend to have cohesive views, regardless of their gender; the same goes for Democrats.

Fourth, given this large polarization on policy views, despite agreement on many positive effects of health insurance, it is perhaps unsurprising that the video treatments from survey 1 (in 2019) did not shift views on broader access to health insurance or a single-payer system, even though they strengthened belief in the positive effects of insurance. In short, respondents do change some of their views about the mechanisms and the desirable design of the policies after seeing the instructional videos. Thus, providing explanations (rather than the provision of simple facts) can be useful as at least a first step in the policy debate. However, in the second survey experiment from 2025, we find that explaining specifically how Medicare and Medicaid work and highlighting their benefits significantly increases support for their expansion. This is true especially for the Medicaid treatment.

Related Literature: Health policy is an area where public understanding—as opposed to policy views—has been less studied. Indeed, several studies investigate satisfaction with the healthcare system but also public attitudes and opinion toward health insurance policies and healthcare reforms (see e.g. Mossialos (1997)). Baker et al. (2014) analyze public preferences regarding the allocation of healthcare resources, highlighting how different groups weigh priorities in health care. Similarly, van Exel et al. (2015) identify diverse moral perspectives on healthcare priority setting in European populations. Together, these studies illustrate that public views on health insurance are shaped by pluralistic normative frameworks. Other research focuses more directly on public attitudes toward health insurance policies. Yörük (2023) finds that age-based health insurance policies significantly influence perceptions of the necessity of coverage. Ashok et al. (2015) document broader trends in public support for redistributive policies, including health insurance. Khanna et al. (2022) identify key factors influencing public perception of health insurance, such as awareness, transparency, tax benefits, claim settlement ratios, and accessibility of information in India.

Less research, however, focuses specifically on the public's understanding of how health insurance works, with a few notable exceptions. Loewenstein et al. (2013) find that consumers commonly misunderstand complex insurance features, such as deductibles and copayments, and that such misunderstandings persist even in the presence of simplified plans. Similarly, Barcellos et al. (2014), using a representative survey just before the rollout of the Affordable Care Act (ACA) exchanges, show that large segments of the U.S. population—especially low-income individuals—lacked basic knowledge of insurance mechanisms. Long et al. (2014), drawing on the Health Reform Monitoring Survey (HRMS), likewise document that over 60% of those targeted by ACA exchanges struggled with core insurance concepts. These studies highlight the existence of widespread information gaps that can affect how individuals interpret policies, navigate insurance options, and make informed decisions.

In this paper, we study how people understand and reason about health insurance, what characteristics shape their policy views, and how their perception of the mechanisms at work drives policy preferences. To this end, we design and run a large scale survey among a representative sample of the US population. Many different factors can affect people's attitudes toward health insurance. On the one end of the spectrum, there are efficiency considerations about the costs and gains of health insurance. On the other end of the spectrum, there are fairness considerations, distributional consequences (e.g., unequal health outcomes). Our survey consists of blocks that elicit views and preferences on each of these relevant factors and helps understand how people trade off these factors. This paper contributes to the existing literature by measuring in coherent framework all these different components using data from a a new tailored survey thus allowing the joint evaluation of people's tradeoffs. Furthermore, we provide evidence on the strongest predictors of people's view and preferences on health insurance.

The rest of the paper is organized as follows. Section 2 describes the survey, data collection, and sample. Section 3 provides insights on people's first-order considerations and key statistics on respondents' knowledge about health insurance policies policy views. Section 4 analyzes respondents' broader concerns about the efficiency and distributional implications of health insurance, with a special focus on the partisan gap. Section 5 discusses views on final policy outcomes. Section 6 concludes.

2 Survey and Sample

This section describes the surveys' structure, the data collection process, and the sample. Appendix A-3 provides the full questionnaires and additional information on important aspects of the surveys.

2.1 Data Collection and Final Sample

We conducted a first large-scale survey of around 1,800 respondents between June and July 2019 on U.S. residents between 18 and 70 years of age. In July 2025, we conducted a follow-up study, sampling around 900 individuals. Both surveys were designed using an online platform (Qualtrics). The first survey link was then distributed by the commercial survey company *Respondi* (`https://www.respondi.com/EN/`) and its U.S.-based partners while the second study was distributed through the platform *Prolific* (`https://www.prolific.com`).

Throughout the paper, we primarily focus on results from the most recent 2025 survey. When relevant, we compare findings from both the 2019 and 2025 surveys to highlight how beliefs have evolved over time. Additional, more detailed results from the 2019 survey are provided in Appendix A-1.

How were participants enrolled? The commercial survey company that we partnered with has "panels" of respondents (i.e., email lists) to whom they send out survey links via email. Respondents were only told the length of the survey, but neither the topic nor the sender. After clicking on the link, respondents were channeled to a consent page (see Appendix A-2.15) that informed them that they were about to take an academic research survey, destined solely for research purposes run by non-partisan researchers. They were asked to respond accurately to the best of their knowledge and were assured that participation was entirely voluntary. Respondents were then guided through some screening questions that ensured that the

final sample was nationally representative along gender, age, and income dimensions. Thus, if respondents decided to drop out at some point during the survey – e.g., upon learning the topic of the survey – all their demographic and background information would be known and we could check for differential attrition by observable characteristics. Respondents were paid only if they fully completed the survey. Participants in the first wave received approximately $3 for completing the survey, while those in the second wave were compensated $3.50. The median time for completion was 37 minutes for the first survey and 25 for the second one.

Final Sample. The final sample is close to representative of the U.S. population. Table 1 shows the characteristics of the sample for each policy topic relative to the U.S. population. Population statistics come from the Census Bureau as described in the table notes. By construction, we are almost perfectly representative along the dimensions of age, gender, income (arranged into five brackets to mimic the way the quotas were imposed during the surveys). In addition, the sample is also broadly representative on non-targeted dimensions such as the share of respondents who are married and those who are employed and unemployed.

Surveys' Structure Figures 3 and A-1 illustrate the structure of the 2025 and 2019 surveys, respectively. To ensure comparability between the two studies, the two surveys follow the same structure and ask mostly the same questions. Below, we outline the main components of the surveys and highlight the sections where the two versions differ. The full questionnaires can be found in Sections A-3 and A-2.

The first block collects background information on respondents' gender, age, income, highest level of education achieved, sector of occupation, employment status, marital status, number of children, place of residence, and political views. The second block consists of open-ended questions meant to elicit first-order considerations that people have before being prompted to think about specific aspects of health insurance with more directed close-ended questions (Ferrario and Stantcheva, 2022). In the third block, we explore people's factual knowledge about the U.S. healthcare system. These two latter blocks are only present in the 2019 survey and were not asked again in the 2025 wave. The fifth block features the experimental part in both surveys. We randomly assign the sample to different groups, each of which watches a different information video or no video at all (the control group). In the first survey, each of the informational videos is designed to emphasize a different aspect of the health insurance system. In the second survey, the goal of the videos is to explain what Medicare and Medicaid are and to highlight their key benefits. We explain in more detail the content of each information video in 5.4. In the sixth block, we explore how people reason about health insurance and what they think the mechanisms at play are. Finally, we ask people questions about their policy preferences. In the final two blocks of 2019 wave only, the same underlying question is posed using three distinct formulations. The first is generic and impersonal (e.g., "If health insurance were to be made more generous, to what extent would it encourage people towards the following behaviors?"). The second version is personalized, directly addressing the respondent ("If your health insurance were to be made more generous, to what extent would it encourage you towards the following behaviors?"). The third formulation focuses specifically on women ("If health insurance were to be made more generous, to what extent would it encourage women towards the following behaviors?"). Whenever relevant, we highlight notable findings from the *Women"* formulation and refer the reader to the corresponding tables in the Appendix.

3 First-order concerns and Knowledge

This section presents the main findings on people's first-order concerns about health insurance and their knowledge about the healthcare system.

3.1 First-order concerns

Open-ended questions are important to elicit first-order, intrinsic concerns that people have, before they are prompted to think of a particular aspect with the more directed survey questions (Ferrario and Stantcheva, 2022). Thus, respondents are not influenced by the particular effects or particular issues that economists are used to thinking about and are free to focus on particular effects of the policy that are important for them. With this in mind, we included six open-ended questions in the 2019 survey only. These questions were intentionally broad in scope, covering topics such as the overarching goals of a well-functioning insurance system, the biggest problems facing the U.S. health insurance landscape today, key considerations surrounding universal health coverage, and the population groups most likely to benefit from the introduction of a single-payer health insurance system. All the questions asked are reported in Appendix A-2. We present results of a subset of the questions asked with additional results in Appendix A-1. As a reminder, these questions were only asked in the 2019 study.

The simplest way of analyzing a body of text consists of plotting "word clouds," where the font size and transparency are proportional to the frequency of each group of words relative to the total. The word clouds in Figure 4 show the main words that appear in the answers. The main considerations about universal health insurance (Panel A) are relatively dispersed, but lack of affordability and the long time it takes to get care seem predominant (represented by "wait time", "long wait", "can't afford", and "high tax"). Regarding the goal of a good health insurance system (Panel B), respondents mostly mention universal coverage: "ensure everyone" and "cover everyone", as well as affordability of coverage ("everyone afford", and "regardless income"). Finally, the shortcomings of the current U.S. health insurance system are very clearly the high costs (represented by "high cost" and "can't afford).

Open-ended questions can be also analyzed using various topic modeling techniques (see Roth et al. (ming) for a comprehensive literature review). In this project, we utilize GPT-4o-mini to extract up to ten common and distinct narratives (excluding sentiment) from respondents' answers. These narratives are identified through an unsupervised classification process and assigned accordingly to each response. Figure 5 presents the results of this topic analysis. Panel (A) displays the ten narratives derived from answers to the question regarding the main considerations that come to mind when thinking about health insurance. For each narrative, the figure shows the proportion of responses belonging to a certain narrative attributed to Republicans versus Democrats. Within each political group, the ten narratives collectively account for 100 percent of responses.

As highlighted in the word clouds, the narratives primarily center on themes of affordability, accessibility, cost, funding, and quality—each revealing substantial partisan divides. Nearly half of Democratic respondents emphasize accessibility and frame healthcare as a fundamental right that should be guaranteed to everyone. In contrast, only 16% of Republican respondents express this view. Republicans are more likely to voice concerns about how universal health insurance would be funded (22% of Trump voters vs. 11% of Clinton voters) and its potential consequences, such as longer wait times and lower quality of care.

Specifically, 14% of Trump voters mention wait times compared to just 4% of Clinton voters, while 13% versus 3% cite quality deterioration. One area of common ground, however, is the high cost of healthcare, which is acknowledged at similar rates by both Trump and Clinton supporters. The rest of the topics are more dispersed and display a smaller political divide. Among the less frequent and less polarized narratives are concerns about the need for higher taxes to finance universal health insurance, the belief that no one should have to worry about how to pay for medical bills, and questions about whether health insurance should cover preexisting conditions. A topic raised exclusively by Republican respondents—mentioned by 6%—is the belief that undocumented immigrants should not receive government-funded health insurance.

Panels (B) and (C) of Figure 5 report the same statistics for the questions concerning the primary goal of a good insurance system and the biggest shortcoming of the U.S. health insurance system, respectively by political candidate voted in 2016 presidential elections. The main narratives track the ones identified in the first open ended question. Indeed, the two major considerations when thinking about the goal of a good health insurance system revolve around affordability and accessibility. Almost one out of two Trump voters and one out of four Clinton voters mention how insurance should affordable to everyone. Almost 30% of Clinton voters vs 12% of Trump voters mention that universal health care should be accessible to all. The fact that coverage should be granted regardless of income status is an important concern for voters from both parties, with slightly more Democrats (14%) mentioning the narrative (vs 10% Republicans). Other smaller and less polarized topics related to the goals of a good health insurance system include the view that government-funded healthcare would promote equity; that preexisting conditions should not result in higher costs; that preventive care should be prioritized; that a single-payer system would simplify access to care; that premiums and deductibles should be generally lower; that insurance should prioritize patient well-being over profit; and that healthcare should be more comprehensive, including coverage for dental and vision services.

Finally, Panel (C) presents the six most prominent narratives identified in response to the question about the biggest problem with the U.S. health insurance system. The most widely shared concern—cited by 62% of Trump voters and 52% of Clinton voters—is that health insurance is unaffordable. The second most common issue, mentioned more frequently by Clinton voters (20% vs. 13% of Trump voters), is the perception that insurance companies prioritize profit over patients' health. Another major concern, raised by both Democrats (17%) and Republicans (14%), is the lack of access to necessary care. Additional challenges highlighted by respondents include the excessive cost of prescription drugs, high out-of-pocket expenses that discourage people from seeking care, and the overall complexity and confusion of navigating the system. Additional figures presenting the results for the remaining questions are reported in Appendix A-1.1.

3.2 Knowledge

Figure 6 starts by analyzing respondents' overall knowledge of U.S. health care, as well as their exposure to it. Panel A highlights that respondents are mostly aware of the share of people who rely on different modes of insurance, but underestimate by 20 percentage points the share that is insured through their employer. Perhaps because of the focus on both the uninsured and Medicare subscribers in the media, respondents overestimate by 5 percentage points the share of uninsured Americans and by close to 10 percentage points the share of Americans insured through Medicare. Panel B shows that the distribution of perceived income limits for Medicaid eligibility and the actual limits in the respondent's state (on the horizontal axis) are entirely uncorrelated. The average perceived eligibility income limit is basically identical across states

regardless of their true thresholds. In addition, close to 70% of respondents underestimate the eligibility income limit (as a share of the Federal Poverty line) for a household like theirs in their state. In other words, they believe that fewer households are eligible for Medicaid than actually are.

Figure 7 shows results on some of the more precise knowledge of health insurance policies. Panel A focuses on the share of respondents who can correctly answer questions about Medicare and Medicaid. Just around half of respondents are able to describe what Medicaid is; close to 70% are able to describe Medicare. The proportion of correct answers to these questions — which were the only knowledge questions repeated in the 2025 survey — shows remarkable stability over time. In 2025, half of respondents correctly identified whether the Affordable Care Act (ACA) changed Medicaid eligibility in their state, with the correct answer naturally varying by state. This represents a 10-percentage-point increase from 2019, when only 40% of respondents answered this question correctly. In Panel B, we can see that the overwhelming majority of respondents are aware that there was an individual mandate in 2018 and that a penalty had to be paid by those without insurance. However, while 57% seem to be aware that there was some change to the individual mandate in 2019, only 22% know that the change made was the reduction of the penalty for being uninsured to zero. Finally, around half of respondents understand that there is an employer mandate but that small employers are exempted. Panel C summarizes answers to the question of whether insurance premia are allowed to depend on various factors. Most people are aware that premia are allowed to depend on age and tobacco use. However, much fewer are aware that premia are allowed to depend on location (62%), but not on gender (54%). Perhaps because of the potentially confusing current policy debate about pre-existing conditions, 32% of respondents only correctly say that premia are not allowed to depend on pre-existing conditions.

4 Beliefs about the efficiency and equity aspects of health care

This section presents the reasoning of respondents on the efficiency effects and distributional effects of health insurance, as well as their social preferences related to health policies. Instead of just asking people about their overall policy views, we want to understand how they think and reason about health care policy in-depth. We separate these issues into those most closely related to "efficiency" such as the economic effects of health insurance, and those most related to "equity," i.e., the distributive impacts of health insurance.

We present tables reporting the results from the 2025 wave, with supplementary tables for the 2019 wave available in Appendix A-1.2. Where relevant, we compare findings across the two waves to illustrate how beliefs and reasoning have evolved over time.

The structure of the tables presented throughout the paper is consistent and follows a standardized format. All regressions include controls for gender, age, race, income class, parental status, education, whether the respondent majored in an economics-related field, employment status, self-reported policy knowledge, self-perceived social class, political affiliation, and indicator variables for all treatments (i.e., question formulations and video courses). Detailed definitions of all variables are provided in Appendix A-4. Due to space constraints, we report only a subset of coefficients in each panel. Panel A displays the coefficients for demographic and personal characteristics (e.g., gender, age, income class, political affiliation). The omitted categories are age 18–29, low income, and Democrat. Panel B ("Video Treatment Effect") presents the effects of the video interventions relative to the omitted category (no video), which will be discussed in Section 5. In addition to the main treatment effects, we also examine heterogeneity by political affiliation

by interacting the treatment indicators with an indicator for being Republican. The omitted categories in this case are Democrat and no video.

The final panel reports the mean of the dependent variable for respondents assigned to the generic question formulation and no video treatment ("Control mean"), as well as subgroup means for male respondents ("Male control mean") and Democrats ("Democrat control mean"). In the Appendix, we report tables from the 2019 wave. As explained in Section 2, the 2019 study includes an additional layer of randomization involving the formulation of the survey questions. Specifically, some questions were presented using the "Women" framing. Accordingly, in these tables, we also report the coefficient on the "Women" indicator variable, both on its own and interacted with the Republican indicator, following the same structure described earlier. This allows us to explore potential heterogeneity in how Democrats and Republicans respond to questions framed around women.

Furthermore, we present figures that visualize key statistics — also reported in the tables — disaggregated by group (e.g., political affiliation and gender) and over time (2019 and 2025). These graphics are intended to offer a more intuitive understanding of the patterns observed in the formal results.

Efficiency considerations: Table 2 considers the perceived behavioral responses and other efficiency mechanisms to increased health insurance coverage using data from the 2025 wave. The corresponding table with data from the 2019 wave can be found in the Appendix A-1.2. In the first four columns in Table 2, the dependent variables are the shares of respondents who think that – in response to more generous health insurance – people would be encouraged to adopt the behaviors listed in each column. The extent to which people would be encouraged to adopt these behaviors is measured on a spectrum ranging from "a moderate amount" to a "great deal." In sum, it represents the strength of behavioral responses to a more generous health insurance system as perceived by respondents. The fourth column shows the share of respondents who believe that employer-provided insurance discourages people from *"quitting a bad job or switching job from fear of losing their health insurance."* Again, respondents are asked either about a generic person, about themselves ("Me"), or specifically about women ("Women").

The responses that are most expected to occur are related to the job-lock phenomenon and the use of the emergency room. 43% believe there would be less use of the emergency room if health insurance were more generous; only 28% think this would induce a higher use of overall medical services (which could be overuse and impose a strain on the medical system) and preventive care (which could be considered a positive effect, as people follow recommendations on preventive care). 89% of respondents believe that employer-provided insurance discourages people from quitting bad jobs or switching jobs, suggesting that more generous health insurance overall could relax the job-lock constraint. Overall, negative behavioral responses do not seem to be a prime concern. Compared to 2019, individuals today express stronger belief in the existence of the job-lock effect, but weaker belief in the notion that expanded coverage would lead to the overuse of other health services, such as emergency room visits and preventive care.

Considering again Table 2, Column 5 shows that 89% of respondents agree that less generous health insurance in the U.S. would lead to worse health outcomes overall. 91% of respondents believe that an increase in insurance coverage for preventive care would reduce overall healthcare costs (Column 6); 90% believe that it is important to ensure that everyone can afford proper healthcare to avoid negative spillovers on others and contagion (Column 7). The last column summarizes all efficiency and behavioral responses in an "Efficiency

Index." This index is constructed using all variables listed in columns (1) through (7), which capture perceived efficiency costs and spillover effects. It is calculated by first averaging the standardized values of these variables (i.e., z-scores computed by subtracting the control group mean and dividing by the control group standard deviation), and then standardizing the resulting average once more. Higher values of the index indicate greater endorsement of efficiency-based arguments in favor of health insurance coverage.

Equity and fairness considerations: When it comes to fairness and equity considerations, 92% of respondents agree that more generous health insurance could reduce financial stress on families (Column 1 of Table 3) and 89% believe it is important to help low-income families afford medical care (Column 2). The share of respondents who believe it is unfair to pay more for healthcare due to pre-existing conditions is 80% overall; 85% believe it is unfair to pay more because of worse health. 75% think health issues are outside of one's control. There is thus widespread belief in the positive efficiency and equity effects of better health insurance, and a view that present health outcomes are largely unfair. The last column summarizes all behavioral responses in an "Equity Index" in the same fashion as described above for the efficiency index. Indeed, it is constructed using all variables listed in columns (1) through (5) that reflect equity considerations and fairness-related arguments. Each variable is first standardized (i.e., transformed into z-scores by subtracting the control group mean and dividing by the control group standard deviation). The index is then computed by averaging these standardized values and standardizing the resulting average once more. Higher values of the index correspond to stronger endorsement of equity-based arguments in favor of health insurance coverage. Over the six years since 2019, there is suggestive evidence that concerns related to fairness and equity within the insurance system have become more salient to the public. On average, the share of individuals agreeing that health insurance in the United States should be more accessible, equitable, and fair has increased by approximately 5 to 10 percentage points.

Views about women: As described in Section 2, some of the questions in the final two blocks (the blocks investing people's reasoning and policy views) were not only asked in the nautral and impersonal formaulation, but also in a formulation asking specifically about women (e.g., how women would react if health insurance were made generous, how fair or unfair would it be if women had to pay more because they were with worse health, etc). Key results from this analysis are summarized below, with full tables available in Appendix A-1.2.

A larger share of respondents believe that women will increase their use of preventive care than when asked about a generic person. 80% of respondents also agree that women's health issues are more outside of their control, as compared to 66% who agree with this statement for a generic person.

However, there appears to be a significant partisan gap when it comes to judgments about women's health situations (this will be also true about supporting women-specific health services coverage). Panel A in Table A-2 shows that Republicans are much more likely to think it is fair if women with worse health pay more for healthcare than when confronted with the same question about a generic person (43% versus 29%). On the other hand, Democrats make no distinction between men and women and also find it more unfair that those of worse health pay more: 84% believe this is unfair, regardless if men or women.

Women's views: Women are more likely to use equity arguments in favor of health insurance; close to 10% more women than men say that it is unfair to pay more for health insurance because of pre-existing

conditions and that it is unfair to pay more for insurance or care overall because of worse health. Hence, on health care issues, women appear more attuned to concerns of fairness and equity, as also reflected in the equity index.

Republicans vs. Democrats: Figure 8 shows the share of Republican versus Democrat respondents in 2019 and 2025 agreeing with the statement on the vertical axis. Republicans are more likely to believe that the positive effects of more generous health insurance (less use of emergency room, less discouragement of job switches due to the lock-in effect) will be weaker, while the negative effects (increased use of overall medical services) will be stronger. Interestingly, over time both Republicans and Democrats have become less convinced that more generous coverage will truly distort behaviors like inducing larger use of ER, of preventive care, and other medical services. Regarding preventive care, Republicans believe more strongly that it will increase, but that is not per se a negative effect. Republicans are less likely to provide arguments, whether centering on equity or efficiency, in favor of the individual mandate or health insurance.
However, although there are large and significant partisan gaps in the other efficiency and fairness considerations, the level of positive beliefs about the effects of health insurance among Republicans remains relatively high, as it is already astronomical among Democrats. For instance, 95% of Democrats believe that less generous health insurance can reduce positive health outcomes in the U.S., and although the share of Republicans who believe the same is lower by 13 percentage points, it is still sizable. 96% of Democrats and 83% of Republicans believe that more coverage for preventive care can decrease overall health costs and 96% of Democrats relative to 83% of Republicans think that healthcare is important to prevent contagious diseases from spreading. When it comes to fairness and equity concerns, 91% of Democrats and 78% of Republicans find it unfair that someone must pay more for health insurance due to worse health overall, while 86% and 68% find it unfair to do so because of pre-existing conditions. 79% of Democrats versus 67% of Republicans believe that health issues are mostly outside of one's own control. 95% of Democrats compared to 87% of Republicans believe that more generous health insurance could reduce financial stress on families. There is a slightly larger partisan gap on whether low-income families should be helped when it comes to affording healthcare, with 96% of Democrats and 82% of Republicans in favor of helping low-income households. As shown in Figure 8, these beliefs have remained remarkably stable over time, exhibiting little change in the six years since 2019. There is, however, some suggestive evidence that support for health insurance has slightly increased among both Democrats and Republicans."

5 Policy views

5.1 Support for full coverage for specific services

Figure 9 show how the support for full insurance coverage for specific services, for which respondents believe that people should have no out-of-pocket costs, split by political views (Panel A) and gender (Panel B) evolved over time. Figure 10 shows respondents' attitudes towards birth control and abortion policies, again split by political views (Panel A) and gender (Panel B), in 2019 and 2025. Table 4 highlights other policy support for health insurance, such as support for a Medicare-for-all system. This particular policy was described as a *"single-payer health insurance program that would be administered by the federal government and financed through taxes."*

There is bipartisan agreement on several health coverage issues, with public support remaining relatively stable over time, aside from a few notable exceptions. In 2025, nearly 70% of respondents support full coverage for preventive care—an increase of 8 percentage points since 2019. This increase is entirely attributable to Democrats. While Republican support for preventive care has remained constant at approximately 55% over the past six years, Democratic support has increased by 10 percentage points, nearly doubling the partisan gap from 11 percentage points to 20. Support for full coverage of primary care visits is lower, with approximately four out of ten respondents in favor in 2025. This represents an increase of roughly 10 percentage points since 2019. Notably, Democratic support has remained stable at around 40%, whereas Republican support has risen from 26% to 32%. Very few respondents endorse full coverage for specialist non-essential care: approximately one quarter in 2025, compared to one fifth in 2019. Partisan divisions are more pronounced for other services. For both catastrophic situations and emergency room use, approximately half of respondents support full coverage. However, a significant partisan gap—close to 18 percentage points—persists, and has remained relatively stable since 2019, when the gap was 16%. Disagreements on certain health services have diminished over time. For instance, around 70% of Democrats currently support full coverage for maternity-related services and pediatric care, compared to 54% and 59% of Republicans, respectively. Republican support for these services has increased substantially over time, narrowing the partisan gap. While the current gap ranges between 13 and 16 percentage points, it ranged between 20 and 25 percentage points in 2019. Support for full coverage of catastrophic situations and emergency room visits has also grown notably in the past six years. As of 2025, 70% of respondents support coverage for catastrophic situations and 61% for emergency room use, compared to 57% and 41%, respectively, in 2019. The partisan gap for these services has remained relatively stable, with Republicans slightly more supportive of coverage for catastrophic care and slightly less supportive of emergency room coverage. An especially noteworthy trend is the increasing Republican support for maternity and pediatric care, with support rising from 41% to 54% and from 46% to 59%, respectively. It is also noteworthy how the gender gap in these policy preferences has evolved over time. Men, in particular, have become significantly more supportive of maternal and pediatric care, with support for both services increasing by approximately 20 percentage points among male respondents over the past six years. An especially noteworthy trend is the increasing Republican support for maternity and pediatric care, with support rising from 41% to 54% and from 46% to 59%, respectively. It is also noteworthy how the gender gap in these policy preferences has evolved over time. Men, in particular, have become significantly more supportive of maternal and pediatric care, with support for both services increasing by approximately 20 percentage points among male respondents over the past six years. A similar pattern is evident across several other health care services, where support for full coverage has increased more markedly among men than among women since 2019. Among women, the most substantial growth in support is observed in the area of catastrophic and emergency care, with an average increase of 14 percentage points.

5.2 Birth control and abortion-related services

Partisan divisions remain particularly pronounced in relation to coverage for birth control and abortion-related services, with these gaps exhibiting remarkable stability over time. 95% of Democrats but only 67% of Republicans agree that employers with personal religious objections should be required to provide birth control coverage in their employer-provided health insurance plan. Close to 80% of Democrats, but just above 40% of Republicans, agree that it is unfair that women who use birth control pay for the cost on

their own. When asked whether women using birth control should not have higher copays, almost 88% of Democrats agree, but only 67% of Republicans do. A support gap of around 40 percentage points between Republicans and Democrats also appears when asked whether health providers should be allowed to opt out from abortion-related treatments and whether insurance providers should have to cover abortion-related treatments.

Perhaps most striking is the near absence of a gender gap on these issues. The notable exception concerns attitudes toward birth control: women are significantly more likely than men to state that it is unfair for them to bear the cost of birth control out-of-pocket and that women using birth control should not face higher copays. For both of these items, the gender gap is approximately 10 percentage points. Over time, the gender gap has remained relatively stable, with one notable exception: a sharp increase in the proportion of men who believe it is unfair that women using birth control have to pay more out-of-pocket. The rise in support for this view among men has been a remarkable 25 percentage points.

5.3 Health Insurance, Medicare-for-All and Mandates

An overwhelming majority of respondents – 80% of them split between 90% Democrats and 67% Republicans – believe the current healthcare system is unfair. Around 58% of respondents support Medicare-for-all (72% of Democrats and only 40% of Republicans), but 18% declare they do not know enough about it to share an opinion. There are very large partisan gaps – overall between 20 and 30 percentage points – on all these policy dimensions. Overall, the policy implications drawn by people on both sides of the political aisle differ significantly, despite the fact that the underlying mechanisms of actions did not exhibit that much disagreement.

5.4 Experimental Results

5.4.1 Video Treatments

Each survey features an experimental component in the form of a video information provision to better understand how respondents learn and how the presentation of a policy affects perspectives. The randomization allows us to estimate the causal effects of the information provided.

In the first survey, we show different subsamples of randomly selected respondents instructional videos that explain the workings and consequences of health insurance policy from three different perspectives. The "Distributional" perspective focuses on the distributional consequences of health insurance, while the "Efficiency" perspective zeroes in on the efficiency costs. Finally, the "Economist" perspective presents issues in light of trade-offs, combining both of the previous perspectives.

In all three videos, the first part of the video considers the corresponding arguments (redistributive or efficiency-based) for universal coverage, while the second part considers how such coverage could be provided (private sector versus single-payer). The Redistribution treatment starts by stating that health insurance can greatly improve people's lives and provides several arguments as to why: i) people can afford to be treated, ii) it can improve their health, and iii) it can reduce financial stress and worries about the costs of care. It provides the examples of a bad accident that requires the protagonist to have an expensive surgery,

and a protagonist with a serious medical condition. The video then presents two ways of providing health insurance: private insurance or a government-run, single-payer system financed through general taxation. It then details the advantages of the single-payer system, the first of which is that such a system could pool all risk and cover everyone; this is in contrast to the current system, wherein if private companies are left to their own devices, only the sickest people will remain in the scheme and these companies will be forced to raise premia and insurance costs. Other advantages of a single-payer system include helping poor families by reducing their out-of-pocket costs and severing the ties between insurance and employment, which would make switching jobs or looking for a better job easier.

The Efficiency treatment again starts by stating that health insurance can greatly improve people's lives and that they would then have to worry less about being able to afford treatment. It then focuses on how broader coverage can lower total healthcare costs in the U.S.: i) it allows people to get preventive care, which makes it easier to detect problems before they escalate; ii) it leads to less overcrowding of emergency rooms, as non-emergency conditions would be treated elsewhere; and iii) there would be less untreated and contagious diseases, resulting in less transmission and negative spillovers on others. The treatment then focuses again on the two ways of providing insurance (private and single payer) and details the efficiency advantages of the single-payer system: i) there would be less distortion from people being unable to switch jobs due to fears of losing health-insurance, which could improve economic activity overall; and ii) there could be lower insurance costs as the government has more bargaining power with pharmaceutical companies and providers to obtain lower prices. The Economist video combines these two videos into one. Screenshots from each of these videos can be found in Figures A-4-A-6 and each video can be seen by following the links below the screenshots.

In the second survey, the videos instead focus on two major health insurance programs currently in effect in the United States: Medicare and Medicaid. The difference to the 2019 experiment is thus that these videos do not talk about health insurance in general but refer to specific programs. Respondents are randomly assigned to one of three groups: those who watch a video about Medicare, those who watch a video about Medicaid, or those who receive no video at all (control group). Figures 1 and 2 display screenshots from the video treatments and include links to the full videos, which are accompanied by voiceover narration. In particular, the Medicare video outlines the role of Medicare as a major federal health insurance program covering over 66 million Americans, primarily those over 65 and individuals with serious disabilities. It presents research indicating that Medicare increases access to healthcare, improves health outcomes, and reduces mortality, particularly at age 65 when eligibility begins. The document also notes evidence that Medicare helps narrow disparities in healthcare access between income groups and suggests that broader coverage could have positive economic effects. It concludes by raising the question of whether expanding Medicare could extend these benefits to more people. The Medicaid video follows a similar structure, presenting the policy as a public health insurance program that provides coverage to low-income individuals, people with disabilities, and many families with children. It highlights that Medicaid reduces mortality rates, improves access to care and mental well-being, lowers financial stress, and enhances life satisfaction. The video concludes mentioning that long-term benefits include better educational and economic outcomes for children. The video concludes by posing the question of whether broader access to Medicaid could extend these effects to more Americans.

5.4.2 Treatment effects

Treatments on efficiency vs. equity impacts. In the 2019 survey, regarding health insurance, the video treatments are able to shift views only to some extent. The Efficiency treatment increases the perceived responses to more generous health insurance along most dimensions and in quantitatively large ways: as a share of the control group mean, the perception of overall medical use responses increases by 25%, the perception of emergency room use decreases by 40%, and the perception of more preventive care increases by 25%. The Economist treatment is effective in convincing respondents that people will use the emergency room less in response to more generous health insurance–the effect is 30% of the control group mean. Both these treatments increase the likelihood of giving efficiency arguments in favor of more generous health insurance. The Efficiency treatment also increases overall support for the individual mandate by 30% relative to the control group mean, and support for full coverage of non-essential specialist care. The Economist treatment is effective in convincing respondents that health issues are outside of one's control. The Distribution treatment has no effects. Hence, it is mostly efficiency arguments that work in the case of health insurance.

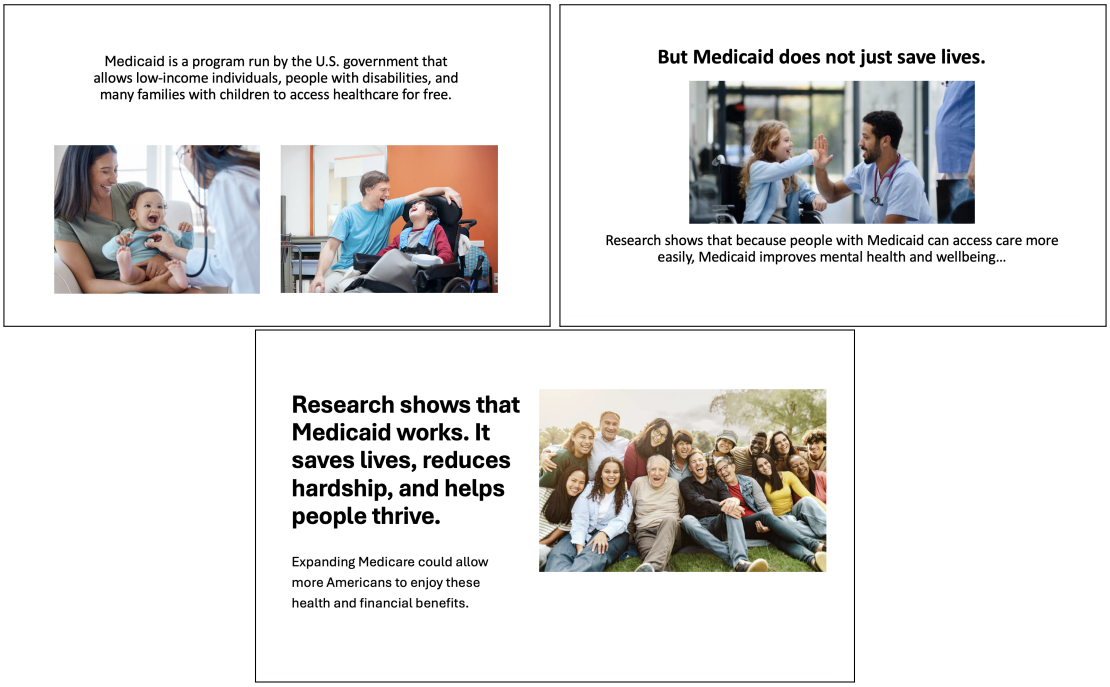

In fact, when it comes to healthcare, efficiency arguments are by far those that work best on Republicans. Indeed, the Efficiency treatment is quite effective in convincing Republicans that more generous health insurance could improve health in the US, and that it can reduce financial stress on low-income families. In both cases, the magnitude of the effects corresponds to almost one half of the belief gap between Democrats and Republicans. Following the Efficiency treatment, Republicans also believe that people will use more preventive care following more generous health insurance (by 60% more, relative to the control group mean).

But while these treatments can generate a change in views on the effects of more generous health insurance and more support for the individual mandate, there are no real effects on supporting broader access to healthcare, a "Medicare-for-all" single payer system, or more help for low-income families to be able to afford health insurance. This is possibly due to strong polarization and the fact that people fall into two groups: those who are already strongly convinced about the need for broader access to health insurance and for support for low-income families (best represented by Democrats), and those who are very much against an expansion of government into the health insurance realm (best represented by Republicans). The videos are already telling the former group information with which they strongly agree, while the latter remain unconvinced even after watching the videos. With respect to Medicare-for-all, although not all Democrats support it (65%), views are nevertheless quite entrenched and people may not understand this policy in the same way. These results make sense in light of earlier findings that, even if there was not as much partisan disagreement about underlying mechanisms, policy views were nevertheless quite divided along political lines. Overall, the partisan gap on health insurance issues is very large and, when it comes to broadening access to healthcare via a single-payer system, the videos are not able to change the negatively-inclined people's views on these matters.

Explaining the benefits of specific programs: Medicaid and Medicare Treatments Both video treatments significantly increase respondents' views that the US health care system is fair, suggesting that they are perhaps learning more about the availability of government-provided health care. The major impact is from the Medicaid treatment. It significantly increases support for Medicaid expansion, and, this support

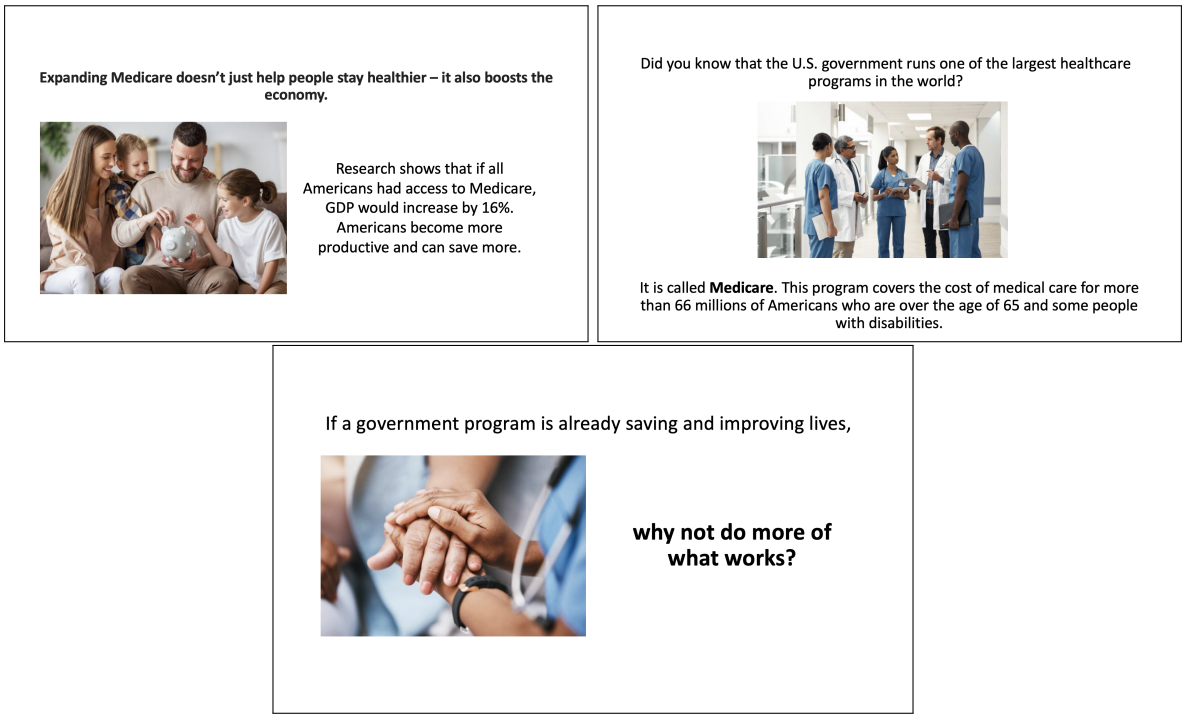

spills over into favoring more Medicare expansion as well (although not larger support for "Medicare-for-all"). The Medicare treatment also improves support for expanding Medicare (but not Medicaid). Overall, it appears that explaining concretely what the benefits (based on research) of these two major programs are helps foster support among respondents. Interestingly, these treatment effects occur across political leanings, even though the baseline support among Republican respondents for these expansions is, as shown above, much lower. In fact, the Medicare treatment improves support for making Medicare more generous (a different outcome than expanding it to more people) only among Republicans. All in all, it appears that being concrete about specific policies when providing information to respondents is quite effective.

Figure 1: Medicaid Treatment

Notes: The figure shows screenshots from the information treatment on Medicaid. The link to the video is here.

FIGURE 2: MEDICARE TREATMENT

Notes: The figure shows screenshots from the information treatment on Medicare. The link to the video is here.

6 Conclusion

In this paper, we investigate how Americans perceive and reason about health insurance by analyzing responses from a large-scale survey and experimental treatments. We use randomized question formulations, open-ended responses, and instructional videos to uncover how political affiliation, demographics, and informational framing shape public opinion on health care policies and insurance.

Our findings reveal that cost concerns dominate public discourse on health insurance, with notable differences along party lines: Democrats are more worried about universal affordability, while Republicans focus on the expenses associated with current health plans. The survey and experiments show that although most respondents agree on the benefits of increased coverage – such as enhanced preventive care, reduced emergency room use, and alleviation of job-lock – views on who should bear the costs remain sharply divided. The analysis of open-ended responses and video treatments further indicates that while information can influence understanding of policy mechanisms, deeply entrenched partisan opinions on issues like single-payer systems and expanded coverage are largely resistant to change. Future research could test different types of informational interventions or framing effects to see if more detailed or repeated exposure to policy trade-offs can shift deeply held opinions. For example, experimenting with different ways of presenting information may help reveal whether nuanced explanations can change views that are otherwise resistant to simple facts.

In addition, future research could examine how demographic factors influence public opinion and compare

these findings with similar studies in other countries. Such work would deepen our understanding of the global challenges surrounding health insurance debates and help inform more effective communication strategies for policy reform.

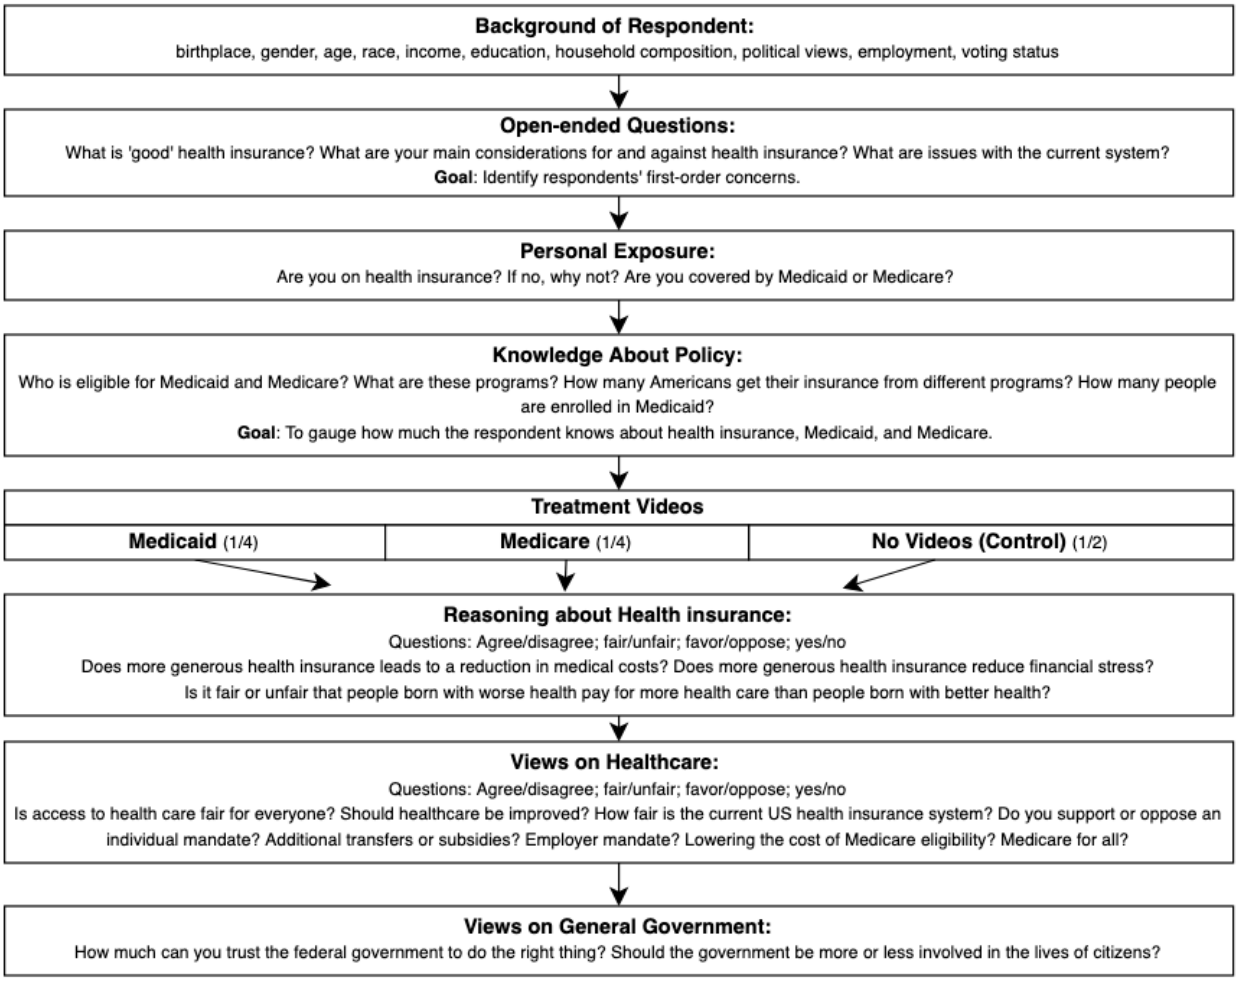

FIGURES AND TABLES

Table 1: Sample and US Population Characteristics

Notes: This figure compares the proportion of survey respondents with specific characteristics to the corresponding proportions in the U.S. population. U.S. population statistics are derived from the Current Population Survey, supplemented with 2016 and 2024 election data. Other sources: https://uselectionatlas.org/BOTTOM/store_data.php (Liep) and https://news.gallup.com/poll/655157/gop-holds-edge-party-affiliation-third-straight-year.aspx (Gallup).

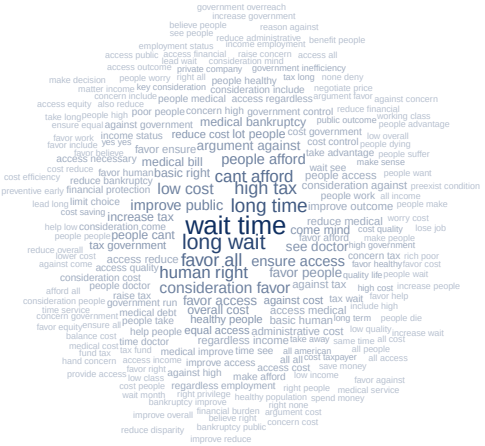

Figure 3: 2025 Questionnaire Survey Flow

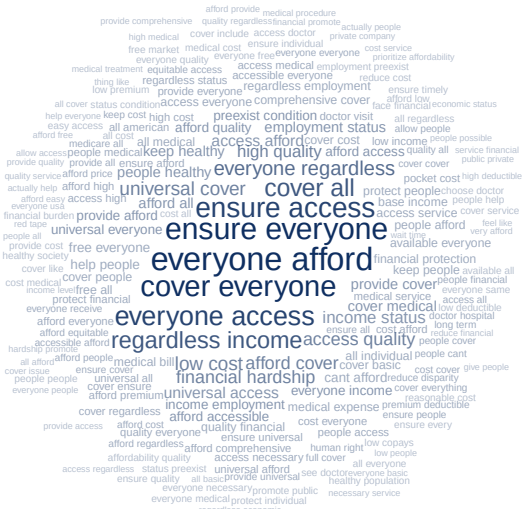

Notes: This figure illustrates the survey flow, which is structured into eight sequential blocks. The first block collects demographic and socioeconomic details, including gender, age, income, education, occupation, employment status, marital status, number of children, place of residence, birthplace, ethnicity/race, political views, and voting status in the most recent presidential and midterm elections. The second block features open-ended questions designed to capture respondents' initial, unprompted thoughts about health insurance before introducing more structured, close-ended questions, following Ferrario and Stantcheva (2022). The third block gathers information on respondents' personal experiences with health insurance and their broader health-related experiences. The fourth block assesses their factual knowledge of Medicaid and Medicare eligibility and the proportion of Americans enrolled in U.S. healthcare programs. In the fifth block, the experimental component is introduced, where respondents are randomly assigned to one of three groups: 1) an informational video on Medicaid 2) an informational video on Medicare 3) No video at all (control group). The fractions in parentheses indicate the proportion of respondents assigned to each treatment with 25% of respondents assigned to Medicaid, 25% assigned to Medicare, and the other 50% assigned to the control group. The sixth block explores all respondents' reasoning about health insurance, including whether they believe health insurance should be made more generous and the effects of expanding U.S. health insurance programs. The seventh block examines respondents' policy preferences regarding health insurance - whether it is fair, whether they support individual and employer mandates, and their support for expanding U.S. healthcare insurance programs. The final block explores respondents' broader views on what the extent of government involvement should be.

Figure 4: Word clouds for Health Insurance

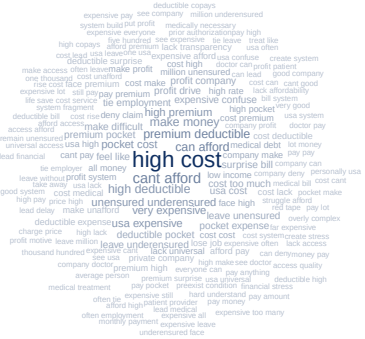

(a) What are your Main Considerations about Universal Health Insurance and Whether the U.S. should have Universal Health Insurance?

(b) What would be the Goal of a Good Health Insurance System?

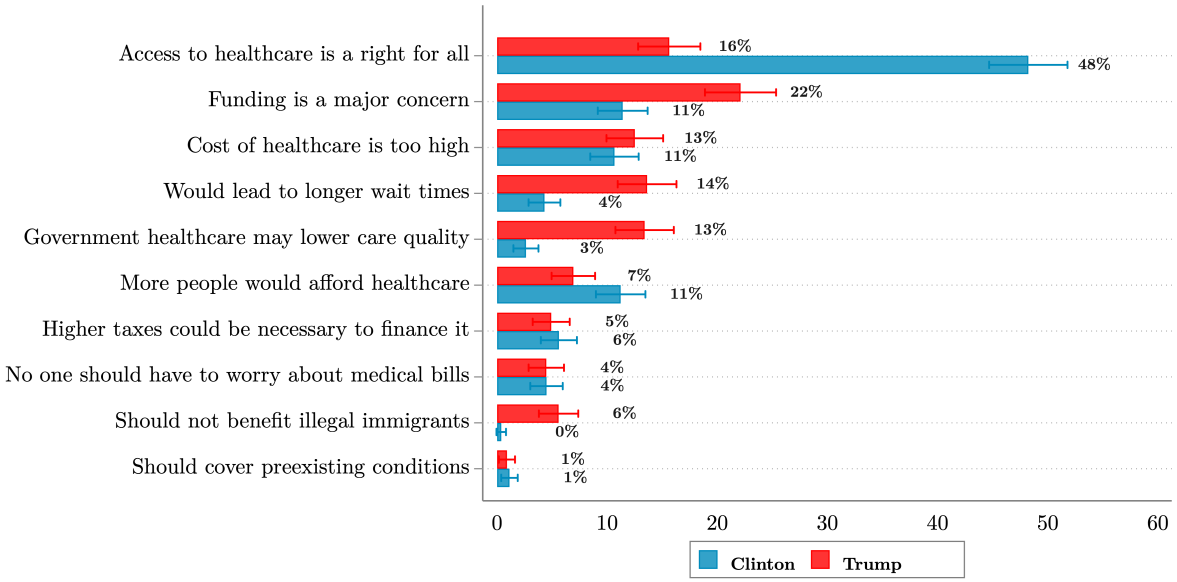

(c) What is the Biggest Problem with Health Insurance in the U.S.?

Notes: The figure shows word clouds based on the text analysis of the open-ended health insurance questions. Each panel refers to the open-ended question indicated in the caption. Raw answers are processed by removing *stop* words and the words explicitly used in the text of the questions and all *don't know* answers. The largest label, *everyone afford*, appears in 6.577% of responses. Labels for panel (A) and (B) labels were increased by 30% to improve legibility. Data from the 2025 survey.

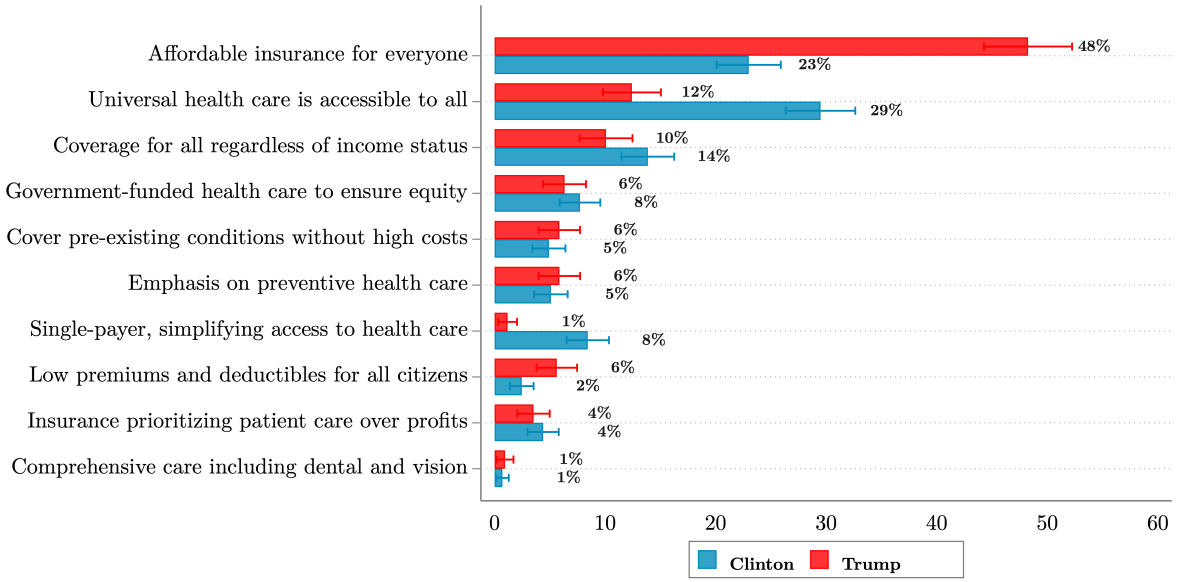

Figure 5: Textual Analysis of Open Ended Questions

(a) When you think about health insurance and whether the U.S. should have universal health insurance for all, what are the main considerations — in favor or against it — that come to your mind?

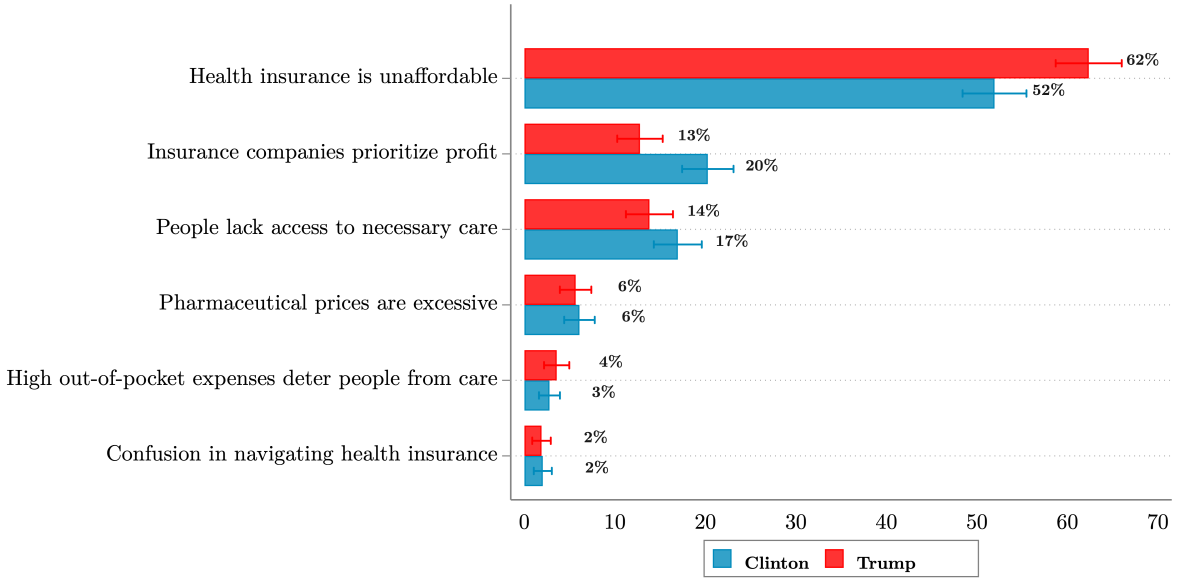

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

(b) What would be a good health insurance system in your view? What would be the goal of a good health insurance system?

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

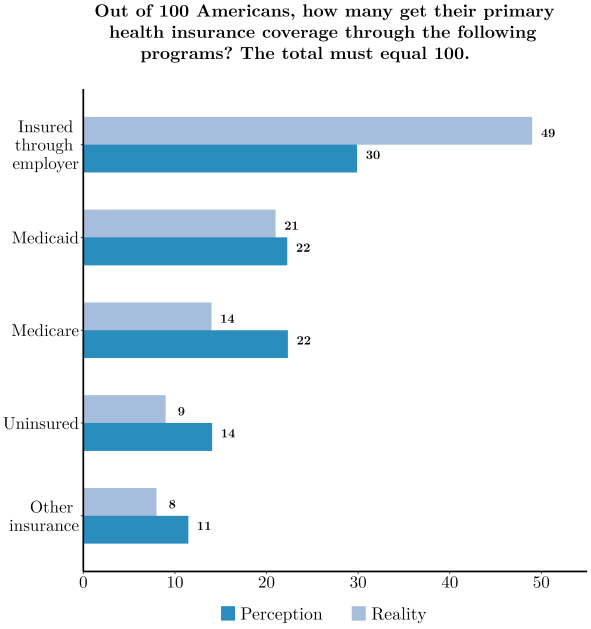

(c) What do you personally see as the biggest problem with health insurance in the United States today?

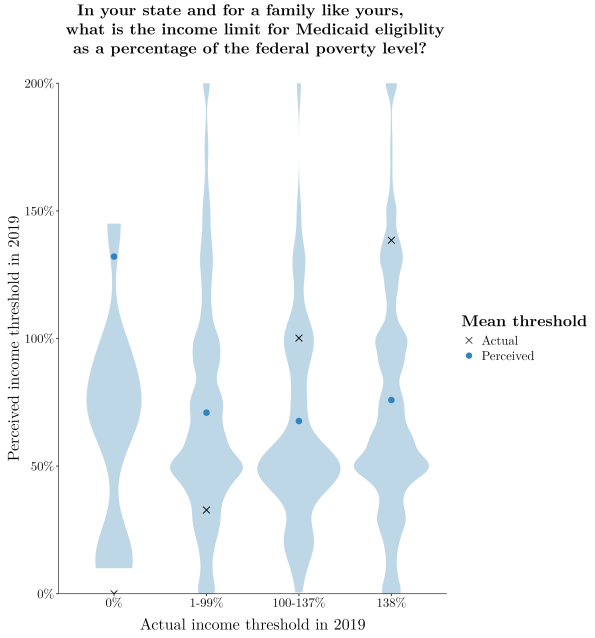

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

Figure 6: Knowledge about the Health Insurance System

(a) Misperception about Share of People Relying on Different Modes of Insurances

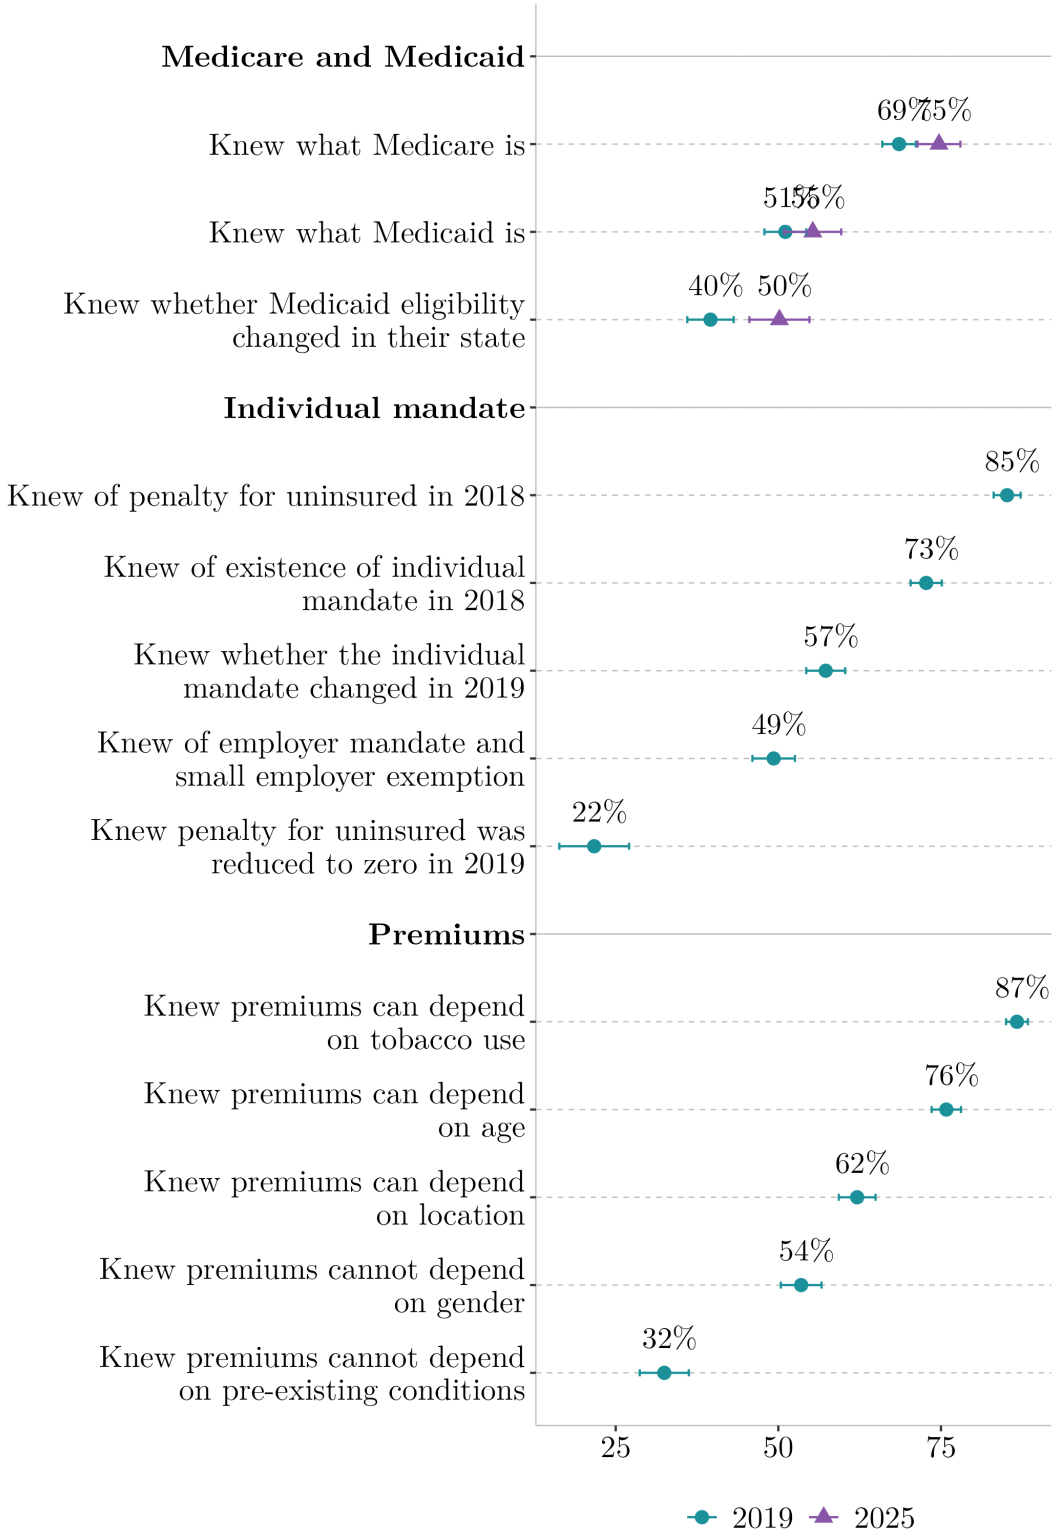

(b) Misperception about Medicaid Income Eligibility

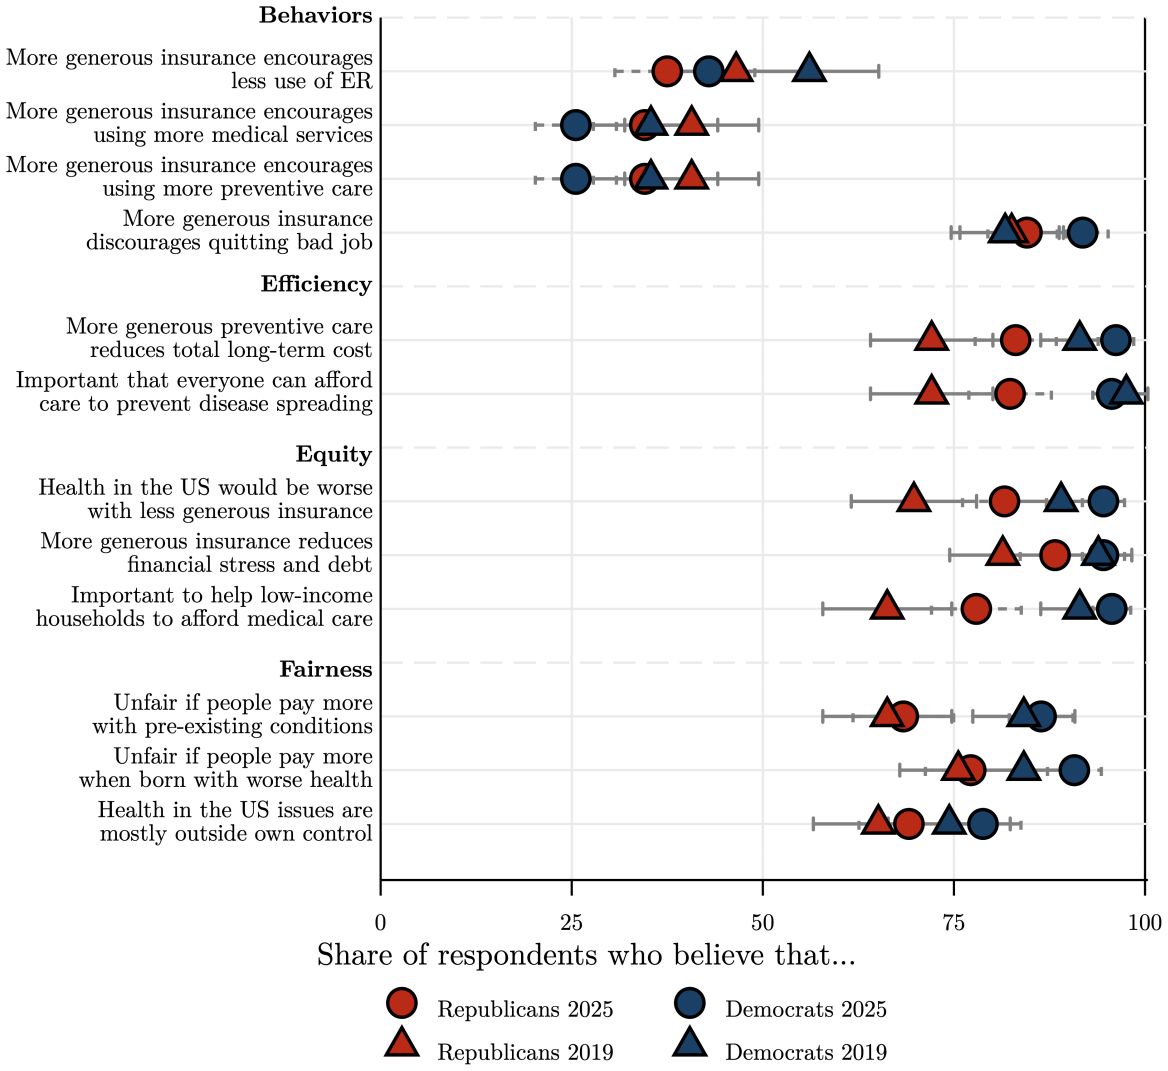

Notes: Panel (A) compares the average perception among respondents of the prevalence of different health insurance programs across the U.S. population to the actual program distribution. Panel (B) shows the perceived Medicaid eligibility, as a percentage of the federal poverty level, and as a function of the respondent's true threshold. The true Medicaid eligibility threshold was computed using information on a respondent's state, number of children and marital status. Violins show distributions of perceived thresholds as a function of binned true thresholds, and dots indicate median responses. Data from the 2019 survey.

Figure 7: Knowledge about Health Insurance Mandate and Premiums

Notes: This chart presents the proportion of respondents who were aware of the respective health insurance mandate and premiums, along with their 90% confidence intervals. Data from the 2019 and 2025 survey.

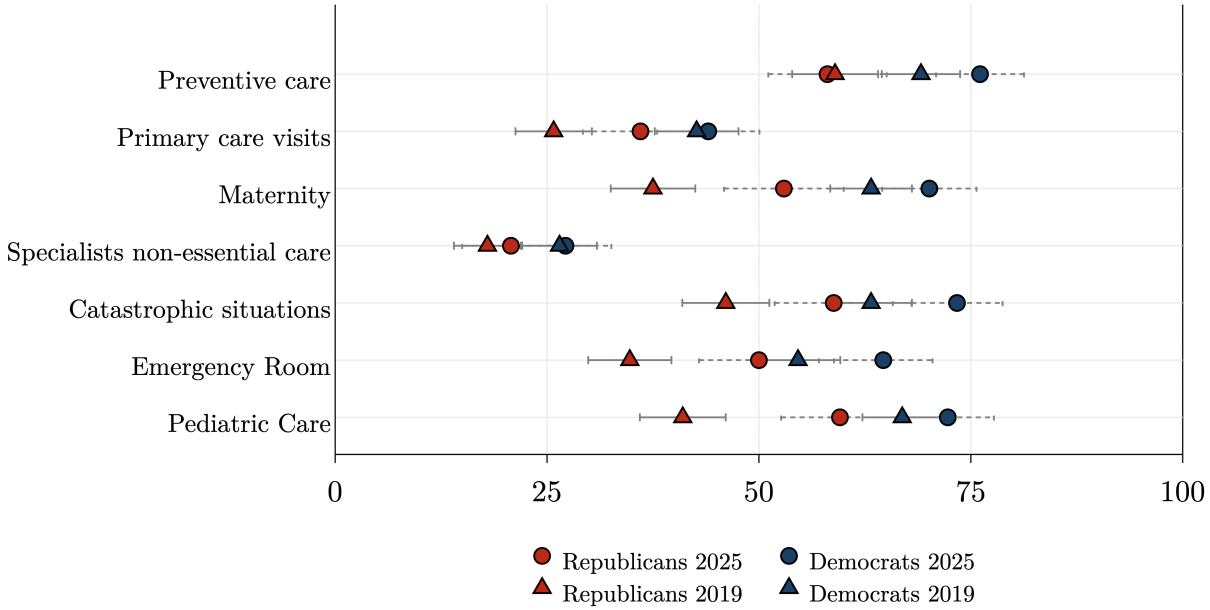

Figure 8: Perceived Mechanisms of Health Insurance

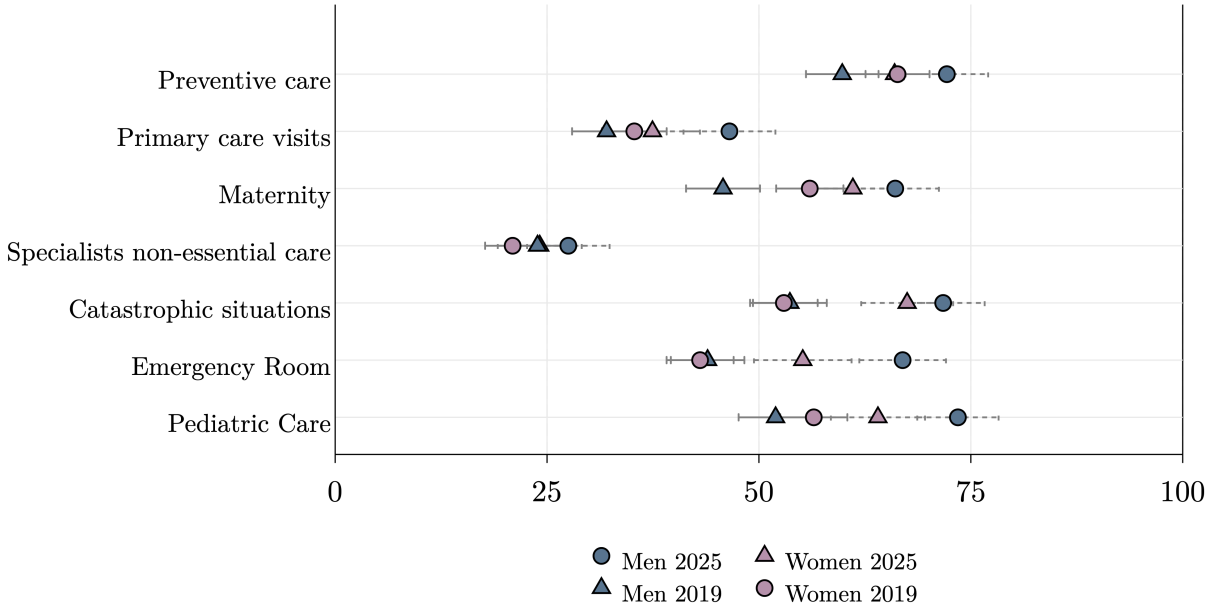

Notes: This chart displays the proportion of respondents who agree with statements about the mechanisms of health insurance, along with their 90% confidence intervals. Data from the 2019 and 2025 survey.

Figure 9: Support Full Coverage for the Following Services

(a) By Political Affiliation

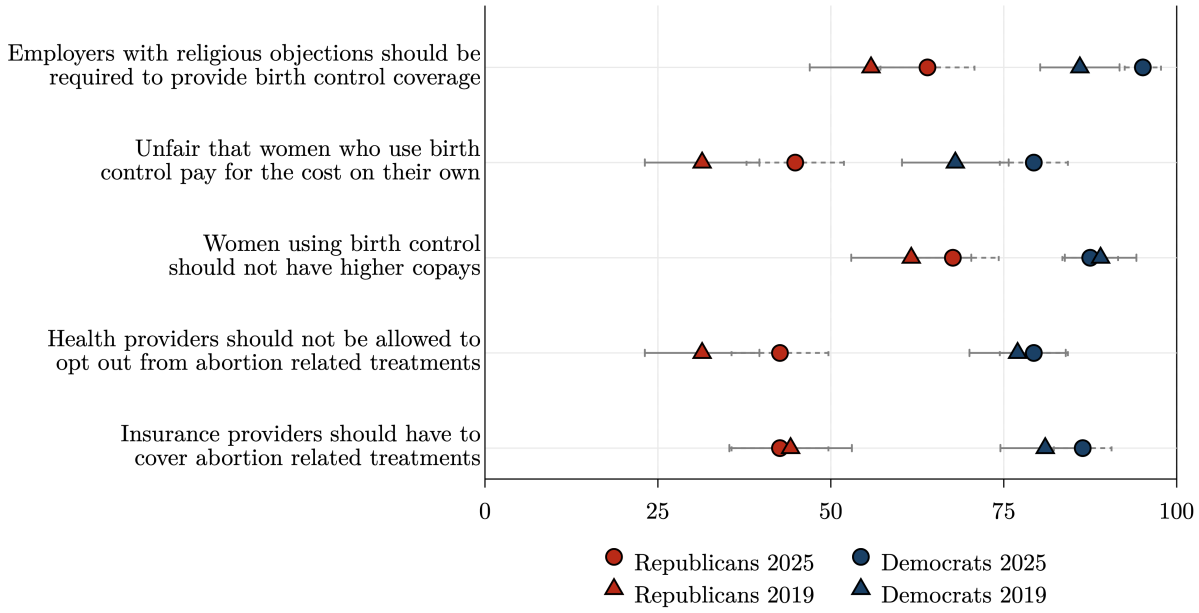

(b) By Gender

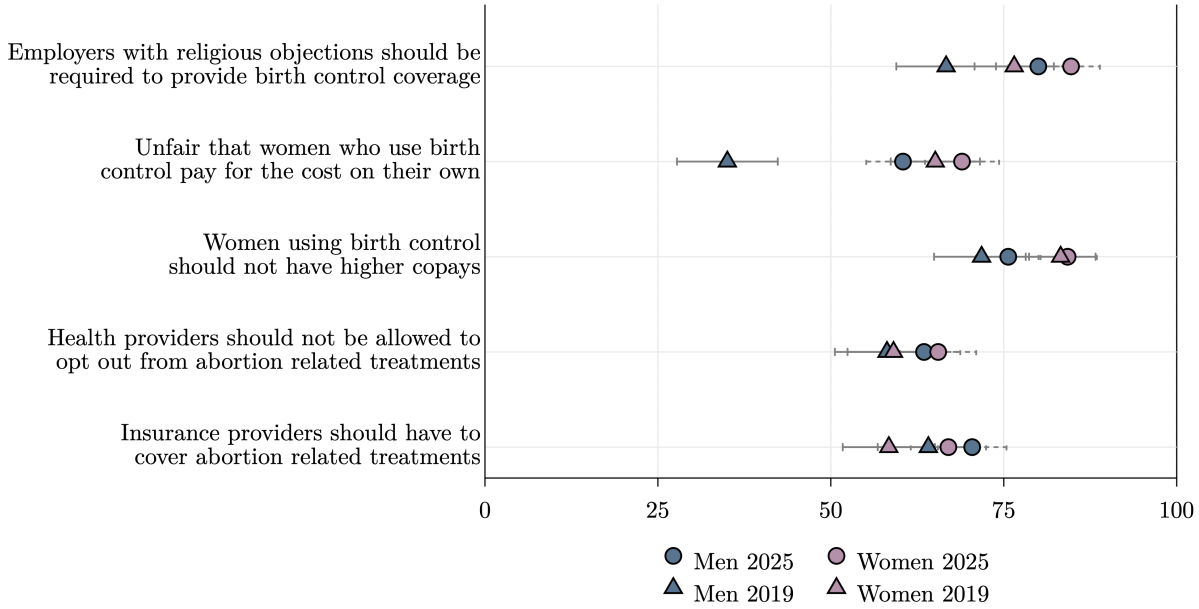

Notes: Panel (A) presents the proportion of respondents who support full coverage for the following categories of medical services, categorized by political affiliation (Republican or Democrat), along with their 90% confidence intervals. Panel (B) displays the results separated by age. Data from the 2019 and 2025 survey.

Figure 10: Reproductive Health

(a) By Political Affiliation

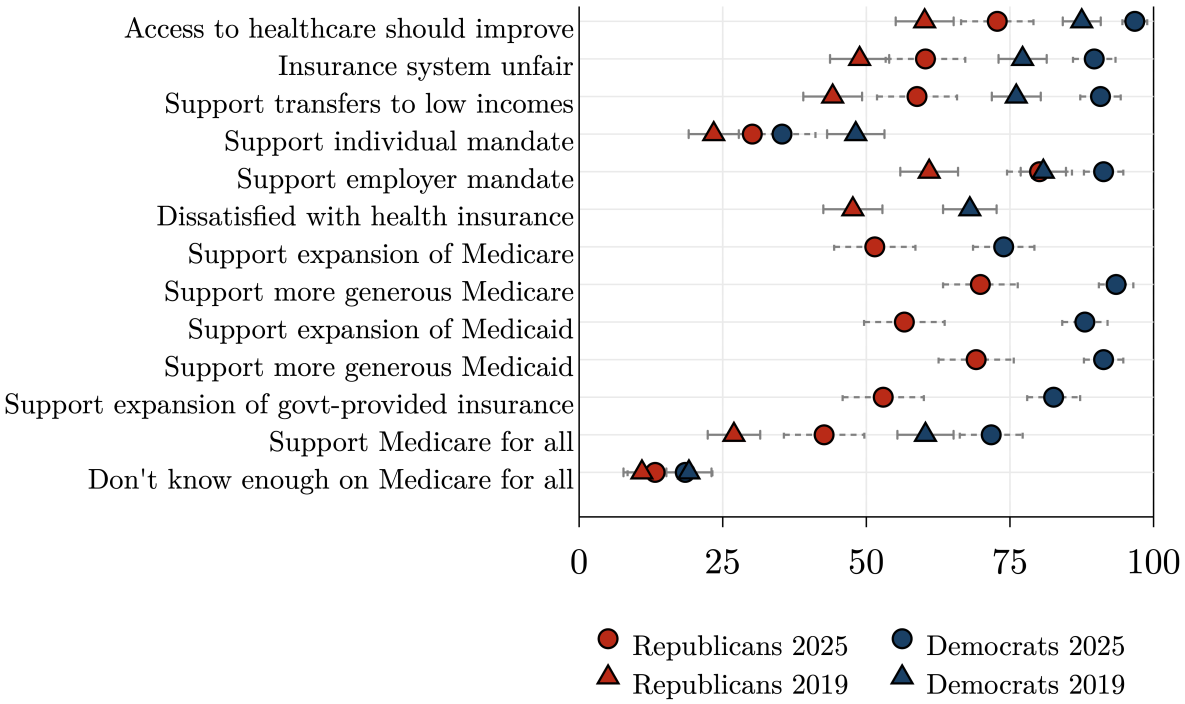

(b) By Gender

Notes: Panel (A) presents the proportion of respondents who agree with statements about reproductive health policies, categorized by political affiliation (Republican or Democrat), along with their 90% confidence intervals. Panel (B) displays the results separated by gender. Data from the 2019 and 2025 survey.

Figure 11: Policy Preferences for Health Insurance

Notes: This chart shows the proportion of respondents who agree with the following statements about health insurance policy, along with their 90% confidence intervals. Data from the 2019 and 2025 survey.

Table 2: Efficiency Costs and Spillover Effects of Health Insurance

	More generous insurance would encourage: less use of Emergency rooms (1)	higher use of Medical Services (2)	higher use of preventive care (3)	Employer-insurance discourage quit bad job (4)	Health in US worse if ↓ insurance (5)	↑ preventive healthcare, ↓ costs (6)	Healthcare to all important bc of contagion (7)	Efficiency index (8)

Observations	898	898	898	898	898	898	898	898

Notes: The dependent variables in columns 1-3 are indicator variables equal to one if the respondent thinks that the extent to which more generous health insurance would encourage people/themselves/women towards the behaviors listed ranges from *a moderate amount* to *a great deal*. *Employer insurance discourage quit job:* the dependent variable is an indicator variable equal to one if the respondent thinks that health insurance through the employer would discourage people/respondents themselves/women from quitting a bad job or switching job out of fear of losing their health insurance. The dependent variables in columns 4-7 are indicator variables equal to one if: *Health in US worse off if ↓ insurance:* the respondent agrees or strongly agrees that with less generous health insurance, health in the U.S./their own health/women's health would be worse since they could not afford appropriate medical care; *↑ preventive healthcare, ↓ costs:* the respondent agrees or strongly agrees that more generous insurance coverage for preventive care can lead to a reduction in total medical costs/to a reduction of their own medical costs/more generous coverage for preventive care *for women* can lead to a reduction in total medical costs; *Healthcare to all important bc of contagion:* the respondent agrees or strongly agrees that it is important that everyone/the respondent themselves/all women can afford proper health care because people who become sick with a contagious disease could have negative effects on others too; *Efficiency index:* index that captures whether the respondent supports efficiency arguments in favor of having health insurance. The questions in columns (1) to (7) are asked with the three different formulations: "Me," "women," and the generic formulation. Standard errors in parentheses. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$. Data from the 2025 survey.

APPENDIX

A-1 2019 Results

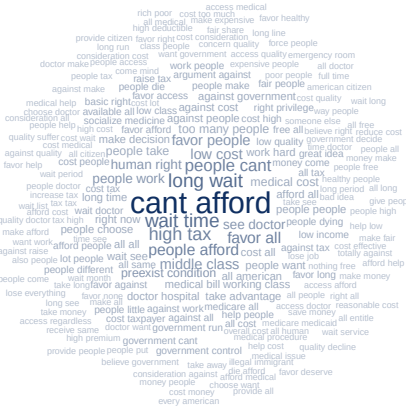

FIGURE A-1: 2019 SURVEY FLOW

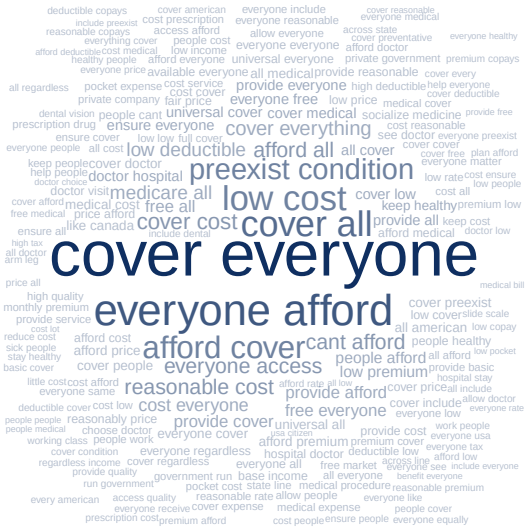

Notes: This figure illustrates the survey flow, which is structured into seven sequential blocks. The first block collects demographic and socioeconomic details, including gender, age, income, education, occupation, employment status, marital status, number of children, place of residence, and political views. The second block features open-ended questions designed to capture respondents' initial, unprompted thoughts about health insurance before introducing more structured, close-ended questions, following Ferrario and Stantcheva (2022). The third block gathers information on respondents' personal experiences with health insurance and their broader health-related experiences. The fourth block assesses their factual knowledge of the U.S. healthcare system. In the fifth block, the experimental component is introduced, where respondents are randomly assigned to one of four groups, each shown a different informational video or no video at all (control group), with each video emphasizing a distinct aspect of the health insurance system. The fractions in parentheses indicate the proportion of respondents assigned to each treatment. The sixth block explores respondents' reasoning about health insurance, with those who watched a video receiving neutrally phrased questions, while those in the control group are assigned one of two formats: first-person phrasing ("Me" branch) or framing questions around women ("Women" branch). The final block examines respondents' policy preferences regarding health insurance and their broader views on the role of government.

Figure A-2: Word clouds for Health Insurance

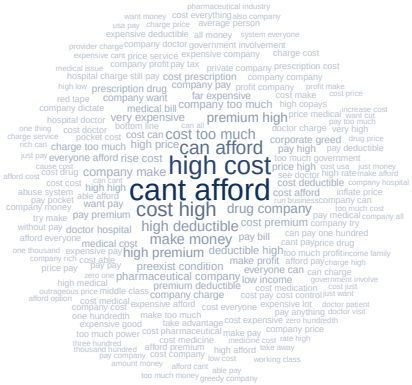

(a) What are your Main Considerations about Universal Health Insurance and Whether the U.S. should have Universal Health Insurance?

(b) What would be the Goal of a Good Health Insurance System?

(c) What is the Biggest Problem with Health Insurance in the U.S.?

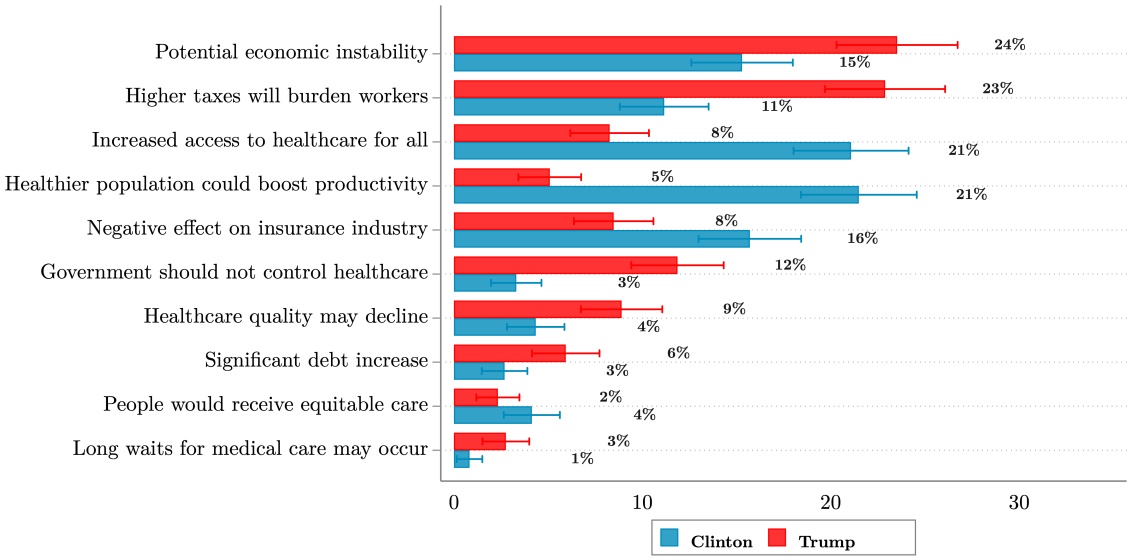

Notes: The figure shows word clouds based on the text analysis of the open-ended health insurance questions. Each panel refers to the open-ended question indicated in the caption. Raw answers are processed by removing *stop* words and the words explicitly used in the text of the questions and all *don't know* answers. The largest label, *cover everyone*, appears in 7.6% of responses. Labels for panel (A) and (B) labels were increased by 10% to improve legibility. Data from the 2019 survey.

A-1.1 Text Analysis

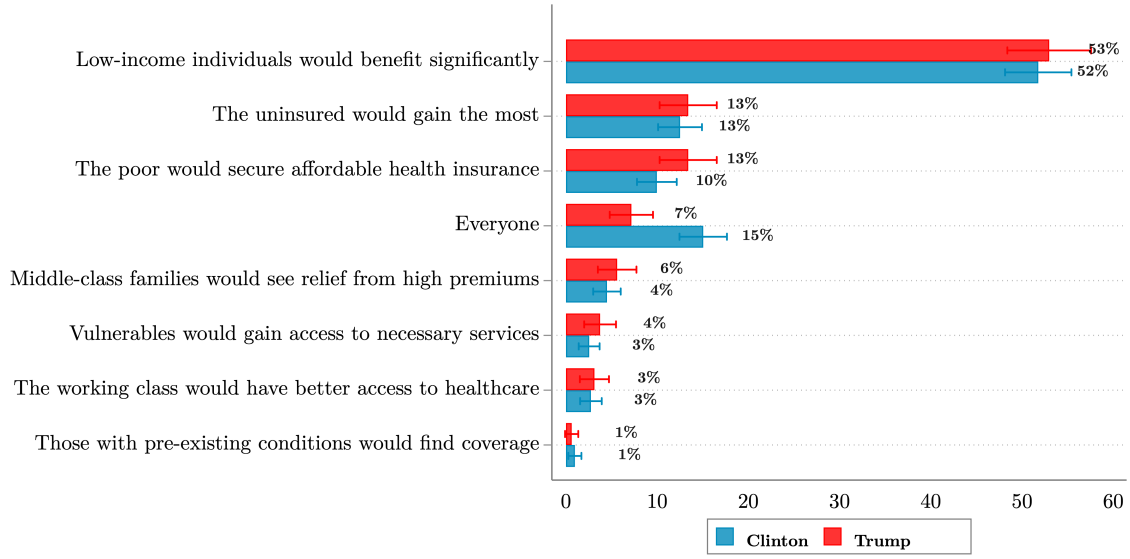

FIGURE A-3: TEXTUAL ANALYSIS OF OPEN ENDED QUESTIONS

(A) WHAT DO YOU THINK WOULD BE THE EFFECTS ON THE U.S. ECONOMY IF A SINGLE-PAYER HEALTH INSURANCE SYSTEM WERE INTRODUCED?

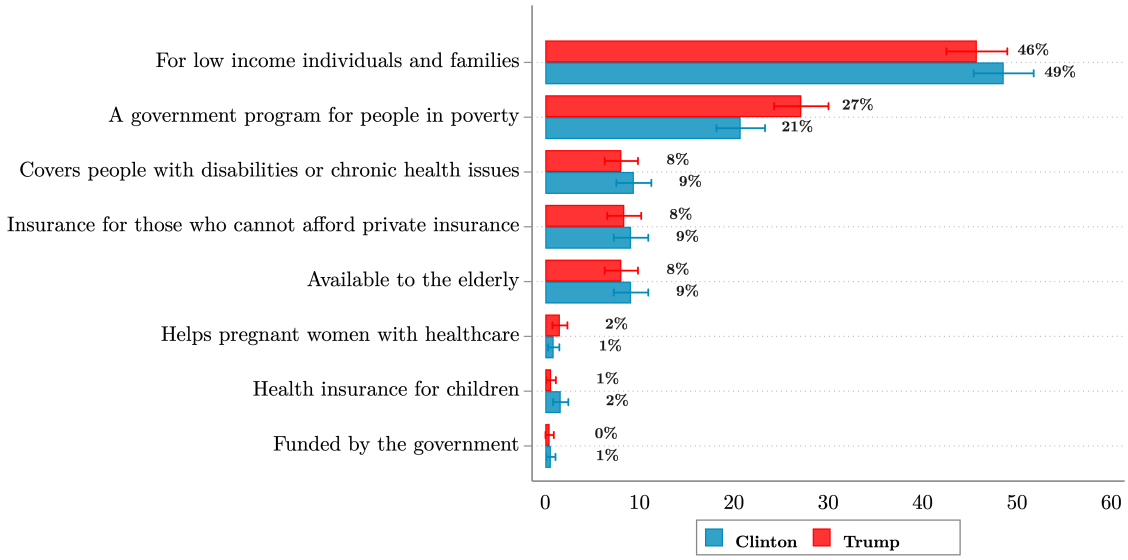

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

(B) WHICH GROUPS OF PEOPLE — IF ANY — WOULD GAIN IF A SINGLE-PAYER HEALTH INSURANCE SYSTEM WERE INTRODUCED IN THE U.S.?

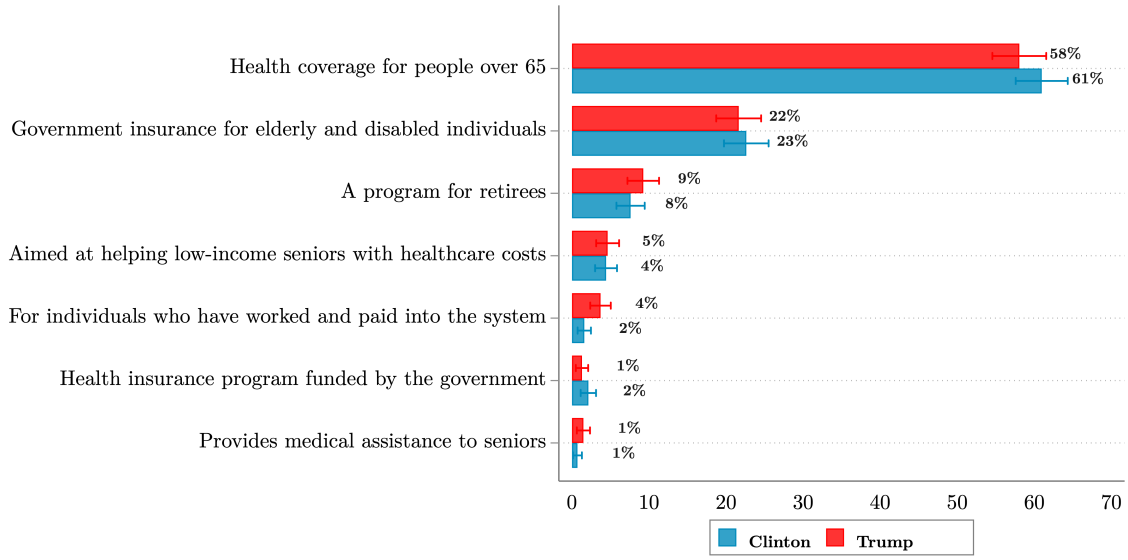

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

(c) What is Medicaid? Who is eligible for Medicaid?

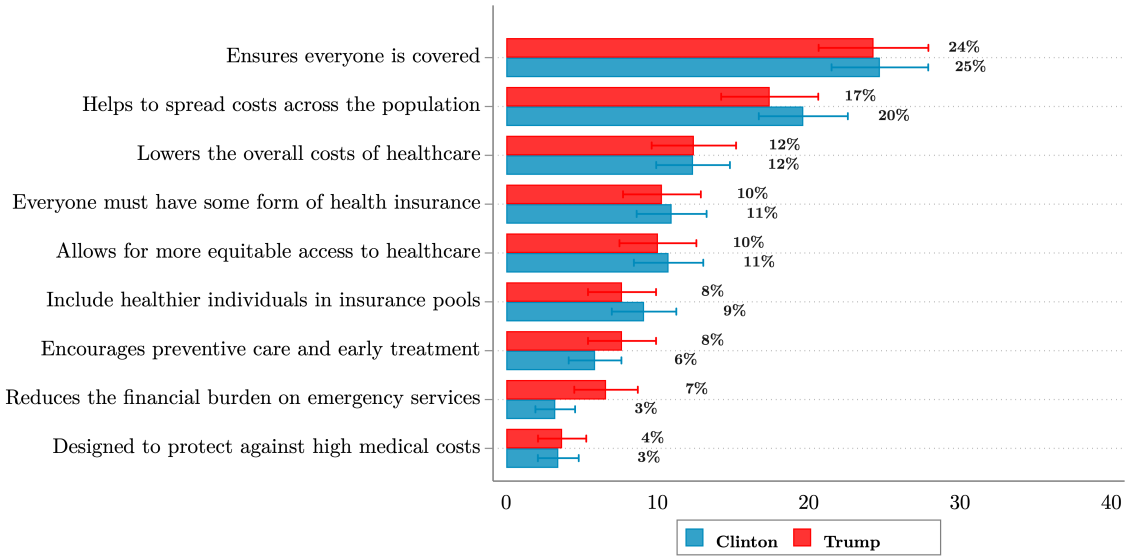

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

(d) What is Medicare? Who is eligible for Medicare?

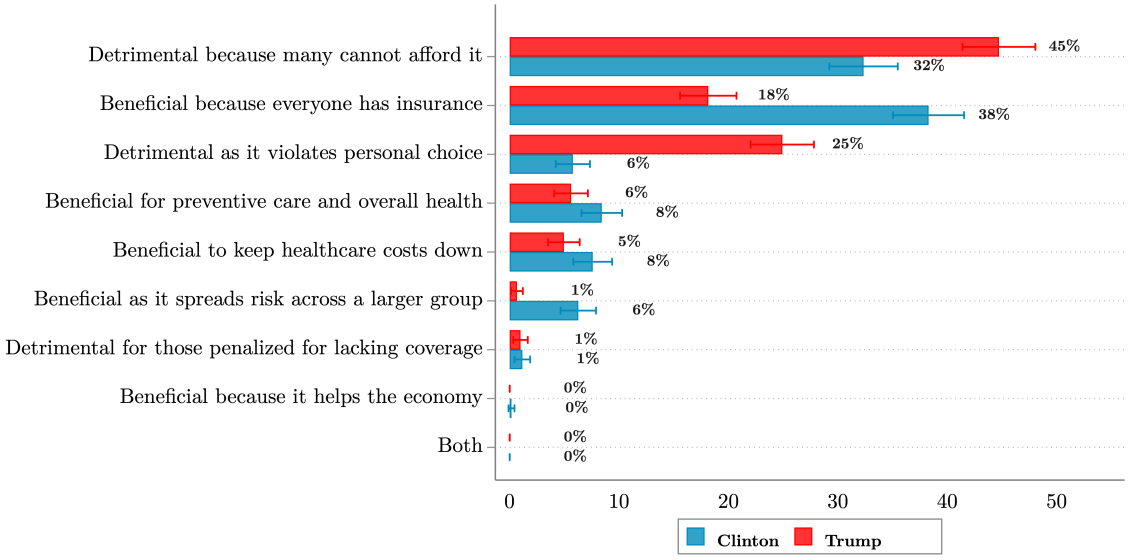

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

(e) In your view, what is the main reason for having an individual mandate?

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

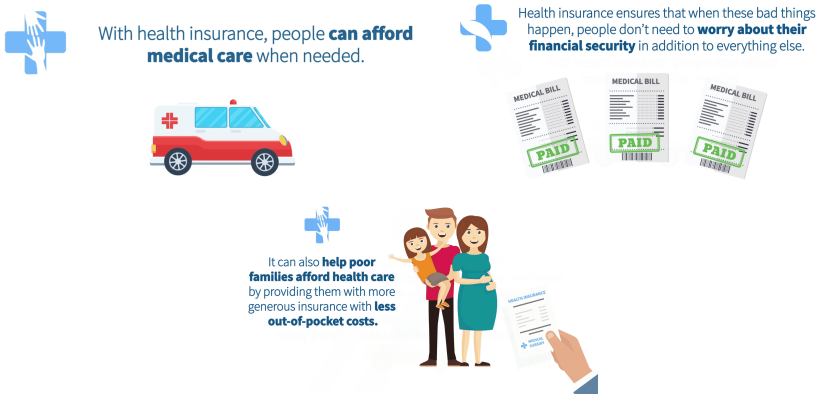

(f) Would you say that an individual mandate is beneficial or detrimental? Please explain your reasoning.

Notes: This chart displays the proportion of answers that match the respective narrative as identified by the LLM, along with their 90% confidence intervals. Percentages sum to 100% for each political affiliation. Data from the 2019 survey.

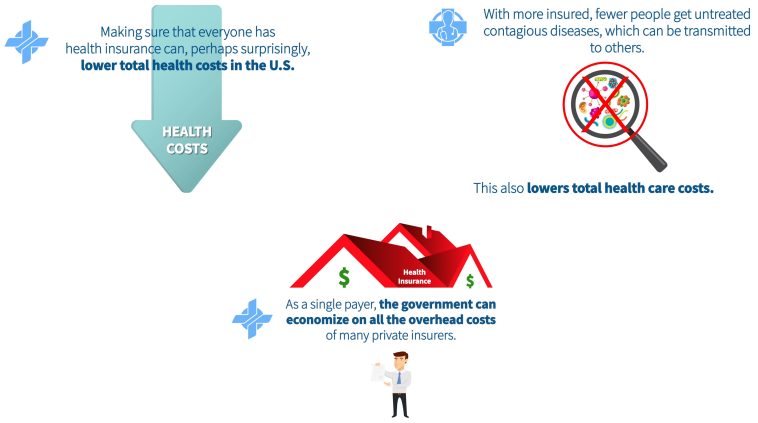

A-1.2 2019 Treatment

FIGURE A-4: REDISTRIBUTION TREATMENT

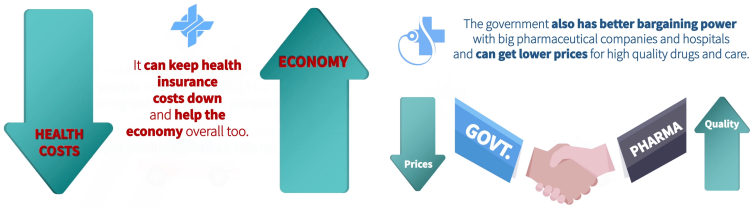

Notes: The figure shows screenshots from the information treatment on the distributive effects of health. Here is the link to the video here.

FIGURE A-5: EFFICIENCY TREATMENT

Notes: The figure shows screenshots from the information treatment on the efficiency effects of health. Here is link to the video here.

FIGURE A-6: ECONOMIST TREATMENT

Notes: The figure shows screenshots from the information treatment on the economic effects of health. Here is link to the video here.

Table A-1: Efficiency Costs and Spillover Effects of Health Insurance

	More generous insurance would encourage: less use of Emergency rooms (1)	higher use of Medical Services (2)	higher use of preventive care (3)	Employer-insurance discourage quit bad job (4)	Health in US worse if ↓ insurance (5)	↑ preventive healthcare, ↓ costs (6)	Healthcare to all important bc of contagion (7)	Efficiency index (8)

Control mean	0.48	0.36	0.36	0.79	0.75	0.81	0.84	0.00
Male control mean	0.45	0.46	0.46	0.75	0.72	0.78	0.80	-0.01
Democrat control mean	0.56	0.35	0.35	0.82	0.89	0.91	0.98	0.18
Observations	1824	1822	1823	1825	1824	1825	1824	1825

Notes: The dependent variables in columns 1-3 are indicator variables equal to one if the respondent thinks that the extent to which more generous health insurance would encourage people/themselves/women towards the behaviors listed ranges from *a moderate amount* to *a great deal*. *Employer insurance discourage quit job:* the dependent variable is an indicator variable equal to one if the respondent thinks that health insurance through the employer would discourage people/respondents themselves/women from quitting a bad job or switching job out of fear of losing their health insurance. The dependent variables in columns 4-7 are indicator variables equal to one if: *Health in US worse off if ↓ insurance:* the respondent agrees or strongly agrees that with less generous health insurance, health in the U.S./their own health/women's health would be worse since they could not afford appropriate medical care; *↑ preventive healthcare, ↓ costs:* the respondent agrees or strongly agrees that more generous insurance coverage for preventive care can lead to a reduction in total medical costs/to a reduction of their own medical costs/more generous coverage for preventive care *for women* can lead to a reduction in total medical costs; *Healthcare to all important bc of contagion:* the respondent agrees or strongly agrees that it is important that everyone/the respondent themselves/all women can afford proper health care because people who become sick with a contagious disease could have negative effects on others too; *Efficiency index:* index that captures whether the respondent supports efficiency arguments in favor of having health insurance. The questions in columns (1) to (7) are asked with the three different formulations: "Me," "women," and the generic formulation. Standard errors in parentheses. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$. Data from the 2019 survey.

A-2 2019 Questionnaire

A-2.1 Background questions

1. What is your gender?

   Male; Female; Other

2. What is your age? *Text box*

3. What was your TOTAL household income, before taxes, last year?

   $0-$9999; $10000-$14999; $15000-$19999; $20000-$29999; $30000-39999; $40000-$49999; $50000-$69999; $70000-$89999; $90000-$109999; $110000-$149999; $150000-$199999; $200000+

4. Were you born in the United States?

   Yes; No

5. In what state or U.S. territory were you born?

   Alabama; Alaska; Arizona; Arkansas; California; Colorado; Connecticut; Delaware; District of Columbia; Florida; Georgia; Hawaii; Idaho; Illinois; Indiana; Iowa; Kansas; Kentucky; Louisiana; Maine; Maryland; Massachusetts; Michigan; Minnesota; Mississippi; Missouri; Montana; Nebraska; Nevada; New Hampshire; New Jersey; New Mexico; New York; North Carolina; North Dakota; Ohio; Oklahoma; Oregon; Pennsylvania; Rhode Island; South Carolina; South Dakota; Tennessee; Texas; Utah; Vermont; Virginia; Washington; West Virginia; Wisconsin; Wyoming; American Samoa; Guam; Northern Mariana Islands; Puerto Rico; Virgin Islands

6. In which ZIP code do you live?

   Text box

7. Please indicate your marital status.

   Single; Married; Legally separated or divorced; Widowed

8. How many children do you have?

   I do not have children; 1; 2; 3; 4; 5 or more

9. *Screening Question 1.* Most modern theories of decision making recognize that decisions do not take place in a vacuum. Individual preferences and knowledge, along with situational variables can greatly impact the decision process. To demonstrate that you've read this much, just go ahead and select both strongly agree and strongly disagree among the alternatives below, no matter what your opinion is.

   Do you agree or disagree with the following statement: "It is easy to find accurate and reliable information in the media these days."

   Strongly agree; Agree; Disagree; Strongly disagree

10. How would you describe your ethnicity/race?

    European American/White; African American/Black; Hispanic/Latino; Asian/Asian American; Mixed race; Other (please specify)

11. Which category best describes your highest level of education?

    Eighth Grade or lower; Some High School; High School degree/GED; Some College; 2-year College Degree; 4-year College Degree; Master's Degree; Doctoral Degree; Professional Degree (JD, MD, MBA)

12. (If highest level of education superior to "High School" to 11) What is/was your field of study in college? If multiple degrees apply, please select the field corresponding to your last degree.

    Accounting/bookkeeping; Administrative science/public administration; Advertising; Agriculture/ horticulture; Allied health; Anthropology; Architecture; Art; Aviation/aeronatics; Biology; Business administration; Chemistry; Child/human/family development; Comm. disorders; Communications/speech; Computer science; Counseling; Criminology/criminal justice; Dance; Dentistry; Economics; Education; Educational administration; Electronics; Engineering; English; Environmental science/ecology; Ethnic studies; Fashion; Finance; Fine arts; Food science/nutrition/culinary arts; Foreign language; Forestry; General sciences; General studies; Geography; Geology; Gerontology; Health; History; Home economics; Human services/human resources; Humanities; Industrial relations; Industry and techn; Information technology; Journalism; Law; Law enforcement; Liberal arts; Library science; Marketing; Mathematics; Mechanics/machine trade; Medicine; Music; Nursing; Other; Other vocational; Parks and recreation; Pharmacy; Philosophy; Physical education; Physics; Political science/international relations; Psychology; Public relations; Social sciences; Social work: Sociology; Special education; Statistics/biostatistics; Television/film; Textiles/cloth; Theater arts; Theology; Urban and regional planning; Veterinary medicine; Visual arts/graphic design/design and drafting; Other

13. What is your current employment status?

    Full-time employee; Part-time employee; Self-employed or small business owner; Unemployed and looking for work; Student; Not currently working and not looking for work; Retiree

14. (If "Full-time employee", "Part-time employee", or "Self-employed or small business owner" to 13) Which category best describes your main occupation?

    Managers (chief executives; senior officials; legislators; managing directors; administrative and commercial managers; production managers; hotel and restaurant managers; retail and wholesale trade managers); Professionals (scientists; mathematicians; engineers; architects; designers; doctors; nurses; paramedical practitioners; professors; teachers; business and administration professionals; finance professionals; software and application developers and analysts; database and network professionals; legal professionals; librarians; curators; social and religious professionals; authors; journalists; creative and performing artists); Technicians and associate professionals (science technicians; engineering technicians; mining, manufacturing and construction supervisors; ship and aircraft controllers and technicians; medical technicians; business and administration associate professionals; legal associate professionals; sports and fitness workers; artistic, cultural and culinary associate professionals; information and communications technicians); Clerical support workers (general office clerks; secretaries; customer services clerks; numerical clerks; material-recording and transport clerks); Service and sales workers (travel attendants, conductors and guides; cooks; waiters and bartenders; hairdressers and beauticians; building and housekeeping supervisors; sales workers; cashiers and ticket clerks; personal care workers; protective services workers); Agricultural workers (crop growers; animal producers; forestry workers; fishery workers; agricultural and fishery laborers); Craft and related trades workers (building trades

workers; blacksmiths; machinery mechanics and repairers; handicraft workers; electrical and electronic trades workers; food processing workers; wood treaters; garment workers); Plant and machine operators, and assemblers (stationary plant and machine operators; assemblers; drivers; mobile plant operators), and assemblers; Elementary occupations (cleaners and helpers; mining and construction laborers; manufacturing laborers; transport and storage laborers; street and related sales and service workers; refuse workers); Armed forces occupations

15. (If "Unemployed and looking for work', "Not currently working and not looking for work", or "Retiree" to 13) Even if you are not currently working, which category best describes your latest occupation? Check the one that applies. If you have had multiple jobs, check the one that describes your main occupation.

    Same options as above

16. *[For health and trade surveys only]* (If "Full-time employee", "Part-time employee", or "Self-employed or small business owner" to 13) Are you employed in one of the following sectors? Check the one that applies. If you have multiple jobs, check the one that describes your main occupation.

    Agriculture, plantations, other rural sectors; Basic metal production; Chemical industries; Commerce; Construction; Education; Financial services, professional services; Food, drink, tobacco; Forestry, wood; Health services; Hotels, tourism, catering; Mining; Mechanical and electrical engineering; Media, culture, graphical; Oil and gas production, oil refining; Postal and telecommunications services; Public service; Shipping, ports, fisheries, inland waterways; Textiles, clothing, leather, footwear; Transport (including civil aviation, railways, road transport); Transport equipment manufacturing; Utilities (water, gas, electricity); None of the above

17. *[For health and trade surveys only]* (If "Unemployed and looking for work", "Not currently working and not looking for work", or "Retiree" to 13) Even if you are not currently working, in what sector does your latest occupation fall into? Check the one that applies. If you have multiple jobs, check the one that describes your main occupation.

    Same options as above

18. Are you covered by Medicaid, Medical Assistance, or Medicaid?

    Yes; No

19. Did you, or anyone in your household, receive food stamps or use a food stamp benefit card at any time during 2018?

    Yes; No

20. At any time during 2018, even for one month, did you or anyone in your household receive any cash assistance from a state or county welfare program such as welfare or welfare to work, TANF, general assistance, diversion payments or refugee cash?

    Yes; No

21. If you had to use one of these five commonly-used names to describe your social class, which one would it be?

    Lower Class or Poor; Working Class; Middle Class; Upper-middle Class; Upper Class

22. Thinking back to when you were in elementary school, how often did you usually recite the Pledge of Allegiance?

    Daily; Weekly; Monthly; A few times per year or less; Never

23. On economic policy matters, where do you see yourself on the liberal/conservative spectrum?

    Very liberal; Liberal; Moderate; Conservative; Very conservative

24. What do you consider to be your political affiliation, as of today?

    Republican; Democrat; Independent; Other; Non-Affiliated

25. (If respondent answered "Other" to previous question) Please specify your political affiliation.

    Text box

26. Did you vote in the last presidential election?

    Yes; No

27. (If "Yes" to 26) In the last presidential election, supported:

    Hillary Clinton; Donald Trump; Jill Stein; Gary Johnson; Other

    (If "No" to 26) Even if you did NOT vote, please indicate the candidate that you were most likely to have voted for or who represents your views more closely.

    Hillary Clinton; Donald Trump; Jill Stein; Gary Johnson; Other

28. Are you registered to vote at your current address?

    Yes; No

29. There are many types of elections such as federal elections for president and members of Congress, primary elections where voters choose party nominees, local elections for city council and school boards, and special elections when vacancies arise in between scheduled elections.

    Which best describes how often you vote, since you became eligible?

    Every election without exception; Almost every election, may have missed one or two; Some elections; Rarely; Don't vote in elections

30. Did you vote in the November midterms elections?

    Yes; No

31. (If "Yes" to 30) Which party did you vote for?

    Republican Party; Democratic Party; Other

32. (If "No" to 30) Which party would you have liked to support?

    Republican Party; Democratic Party; Other

33. How much, if at all, do you try to stay up to date on the news?

    A great deal; A fair amount; Only a little; Not at all

34. Thinking about various sources of news available today, what would you say is your main source of news about current events in the U.S. and around the world?

    TV; Newspaper (print); Magazine; Radio; Internet; Word of mouth; Other; None, I don't follow the news

35. (If selected *TV*) Please specify

    ABC; BBC; CBS; CNBS; CNN; Fox News; MSNCB; NBC; PBS; Univision; Local TV news; Other television or TV news; Other television program or channel; Non-specific news or evening news; Non-specific cable news

36. (If selected *Newspaper (print)*) Please specify

    The New York Times; The Wall Street Journal; USA Today; Los Angeles Times; The Mercury News; New York Daily News; New York Post; The Washington Post; Other big-city newspaper; Local newspapers; Other newspapers

37. (If selected *Radio*) Please specify

    NPR; Talk Radio; Other Radio Channel

38. (If selected *Internet*) Please specify

    News websites and online newspapers; Facebook; Twitter; Instagram; Snapchat; Youtube; Pinterest; Reddit; Linkedin; Other social media sites; Other internet sites

39. (If selected *Magazine*) Please specify

    Time Magazine; The Atlantic; The New Yorker; The Economist; Bloomberg Businessweek; Other Magazine

40. (If selected *News websites and online newspapers*) You answered "News websites and online newspapers". Could you please specify your main source of information?

    HuffingtonPost.com; CNN.com; NYTimes.com; WashingtonPost.com; LATimes.com; FoxNews.com; Bloomberg.com; DrudgeReport.com; Yahoo News; Google News; Other

41. (If respondent gets their news mostly from online newspapers) Would you say that you access most of the articles you read through a social media like Facebook or Twitter or by going directly on the website of the newspaper?

    Mostly through social media; Mostly through the newspaper's website

42. In general, how important do you think it is to stay informed about economic policy?

    Very important; Somewhat important; Not very important; Not important at all

43. (If "Very important" or "Somewhat important" at 42) What would you say are the main reasons why you wish to be well informed about economic policy?

    You may select several options.

    Affects personal finances; Affects business or profession; Relevant to stock market and investments; Economic issues are important politically and might affect my vote; To be a responsible citizen, I like to keep informed

44. How knowledgeable do you consider yourself on economic policies and issues?

    Highly knowledgeable; Somewhat knowledgeable; Not very knowledgeable; Not knowledgeable at all

45. For the following sources of information, how often would you say you use them to stay informed about economic policy?

    Often; Regularly; Occasionally; Rarely; Never

    - TV
    - Newspapers (print)
    - (online)
    - Magazines
    - Radio
    - Internet
    - Word of mouth

A-2.2 Open-ended questions

We now want to ask you a few broader questions. Please use the text boxes below and write as much as you feel like. Your opinion and thoughts are important to us! There is no right or wrong answer.

1. What would be a "good" health insurance system in your view? What would be the goal of a good health insurance system?

   Text Box

2. When you think about health insurance and whether the U.S. should have universal health insurance for all, what are the main considerations — in favor or against it — that come to you mind?

   Text Box

3. What do you personally see as the biggest problem with health insurance in the United States today?

   Text Box

4. A single-payer health insurance system is one in which the government operates a tax-funded health insurance plan for all U.S. residents. The government acts as the main insurer and everyone is included in the universal health insurance scheme.

   Text Box

   What do you think would be the effects on the U.S. economy if a single-payer health insurance system were introduced?

   Text Box

5. Which groups of people — if any — would gain if a single-payer health insurance system were introduced in the U.S.?

   Text Box

A-2.3 Personal Exposure

1. Do you currently have health insurance?

   Yes; No

2. (If "No" to 1) Which of these are reasons why you stopped being covered or do not have health insurance?

   You may select several options.

   Lost job or change in employment; Change in marital status or death of parent; Ineligible due to age or left school; Employer didn't offer or insurance company refused; Cost; Medicaid stopped; Other (includes moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons)

3. (If "Yes" to 1) Are you on Medicaid or Medicare?

   Yes; No

4. (If "Yes" to 1 and "No" to 3) Who pays for the cost of premiums on your health insurance? Do you or someone in your household pay the total costs, does an employer or other organization pay the total cost, or is it the cost shared between the employer or some other organization and you or someone in your household?

   Self/Household pays all; Employer or organization pays all; Costs are shared

5. Within the last twelve months, have you or a member of your family put off any sort of medical treatment because of the cost you would have to pay?

   Yes; No

6. (If "Yes" to 5) When you put off this medical treatment, how serious was the condition or illness?

   Very serious; Somewhat serious; Not very serious; Not at all serious

7. Are you generally satisfied or dissatisfied with the total cost you pay for your healthcare?

   Very satisfied; Somewhat satisfied; Somewhat dissatisfied; Very dissatisfied

8. Overall, how would you rate the quality of health care you receive?

   Excellent; Good; Fair; Poor

A-2.4 Knowledge about policy

In this section, all respondents will receive the following screening question.

- As you probably know, the government and researchers gather a lot of statistical information about the economy. We are interested in learning whether this information finds its way to the general public. The next set of questions is about some economic policies in the United States. These are questions for which there are right or wrong answers.

  In order for your answers to be most helpful to us, it is really important that you answer these questions as accurately as you can and without consulting any external sources. Although you may find some questions difficult, it is very important for our research that you try your best. Thank you very much!

- For the next set of questions, we will award additional survey pay for respondents whose answers are closest to the true answer. All questions which are subject to this additional award are clearly marked with a green text at the top of the page. Please note that consulting outside sources will disqualify you from this award. Please answer on your own.
- These questions are part of the questions for which accurate answers will be rewarded.

1. Out of 100 adults in the U.S., how many are currently paying any income tax at all?

   Slider going from 0 to 100

2. Can you think of the different ways in which Americans today obtain health insurance? Please list all you can think of.

   Text box

3. These questions are part of the questions for which accurate answers will be rewarded

   What is Medicaid? Who is eligible for Medicaid?

   Text box

4. What is Medicare? Who is eligible for Medicare?

   Text box

5. This question is part of the questions for which accurate answers will be rewarded.

   If an elderly person is in need of long-term care, which program(s) will pay for that? Select all correct answers from the list below (several answers can be correct):

   Note: Long-term care means assistance with the basic personal tasks of everyday life for elderly people.

   Medicare will pay for all of long-term care for all elderly above 65; Medicare supplements will pay for all of long-term care for elderly who purchase them; Medicare with or without supplements will only pay for short periods of long-term care for all the elderly above 65; Private long-term care insurance plans will only pay for long-term care for all elderly who purchased them; Employer health insurance plans will pay for the long-term care of retired employees; Medicaid will pay for all of long-term care for all elderly; Medicaid will pay for all of long-term care only for elderly who have a low income and low assets; Medicaid will pay part of the long-term care for all the elderly

6. These questions are part of the questions for which accurate answers will be rewarded.

   Medicaid is a federal and state program that helps people with low income pay for their health insurance.

   Medicare is a federal program that provides health insurance for Americans aged 65 and older, as well as younger people with disability status.

   Out of 100 Americans, how many get their health insurance coverage through the following programs? The total must equal 100.

   Important note: Individuals can be enrolled in several programs at once. Here, we are interested in the primary insurer. An individual who has Medicaid and any other type of insurance is counted in the Medicaid category and an individual who has both Medicare and employer-based coverage is counted in the employer-based category.

- Medicaid
- Medicare
- Group health insurance through employer
- Other insurance (policies purchased directly from an insurance company, military, other public. . .)
- Uninsured

7. Out of 100 American children, aged 18 and greater, how many are enrolled in Medicaid?

   Slider going from 0 to 100

8. Out of 100 American children, aged below 18, how many are enrolled in Medicaid?

   Slider going from 0 to 100

9. Out of 100 American children, how many are on Medicare?

   Slider going from 0 to 100

10. Out of 100 Americans, how many get group health insurance through their employers?

    Slider going from 0 to 100

11. This question is part of the questions for which accurate answers will be rewarded.

    Are insurance companies currently allowed to set different premiums based on the following characteristics?

    Yes; No

    - Gender
    - Age
    - Tobacco use
    - Where the person lives
    - Preexisting conditions (such as having diabetes, obesity, or being pregnant at the time of purchase of the insurance)

12. In 2018, was there an individual mandate, whereby everyone was obligated to buy health insurance?

    Yes; No

13. (If "Yes" to 12) What happened if you did not have health insurance?

    A penalty had to be paid; You were forced to buy insurance; You received a warning; Nothing happened

14. Were any changes made to the individual mandate in 2019?

    Yes; No

15. (If "Yes" to 14) How did the legislation on the individual mandate change in 2019?

    The penalty was increased; The penalty was decreased; The penalty was reduced to zero; The individual mandate was canceled; Other

16. Is there currently an employer mandate, whereby employers have to provide health insurance to their employees?

    Yes, all employers are required to provide health insurance to their employees; Yes, but small employers are excluded from this requirement; No, employers are not required to provide health insurance to their employees

17. These questions are part of the questions for which accurate answers will be rewarded.

    To be eligible for Medicaid, a family's income needs to be below a certain percentage of the Federal Poverty Level for a family of that size. How high is that percentage in your state for a family like yours to be eligible for Medicaid?

    Under 50% of the FPL; Between 50 and 90% of the FPL; Between 130 and 160% of the FPL; Between 160 and 200% of the FPL; Higher than 200 of the FPL;

18. Please specify the percentage

    Text box

19. Did the Affordable Care Act (ACA) make any changes to the eligibility for Medicaid in your state?

    Yes, it expanded eligibility; No, it remained the same; Yes, it reduced eligibility

20. In order to facilitate our research on decision making we are interested in knowing certain factors about you, the decision maker. Specifically, we are interested in whether you actually take the time to read the directions; if not, then some of our manipulations that rely on changes in the instructions will be ineffective. So, in order to demonstrate that you have read the instructions, please ignore the question below. Instead, simply put the slider to 98. Thank you very much.

    Slider from 0 to 100

21. Comparing the U.S. to other rich countries such as France, Germany, or the U.K., how much do you think the U.S. spends on health care as a share of its GDP?

    Much more; More; About the same; Less; Much less

22. Comparing the U.S. to other rich countries such as France, Germany, or the U.K., how good do you think that important and common measures of health outcomes, such as life expectancy or infant mortality are in the U.S.?

    Much better; Better; About the same; Worse; Much worse

A-2.5 Health Treatment

Respondents are randomly assigned to one of four groups, labeled as "Right Wing," "Left Wing," "Economist," and "Control". In the first three cases, respondents are shown a video, different between the three treatment groups, while those in the control group are not. The videos are introduced by the following:

- Recent academic research has studied what the effects of health care insurance are. We will now show you one short video (with sound) that summarizes some key ideas of these studies. Please pay attention to the information provided as you will be asked questions about it later. Do not skip forward or close the page while the video is running.

Please proceed to the next page when you are ready. Note that you will not be able to move forward with the survey before the end of the short video. The video lasts about three minutes.

Links to the videos can be found here:

- Health Treatment - Right Wing
- Health Treatment - Economist
- Health Treatment - Left Wing

A-2.6 Mechanisms

1. An individual mandate for health insurance means that everyone has to buy health insurance that covers some essential health benefits. This can go hand in hand with some subsidies for low-income households who couldn't afford plans on their own.

   In your view, what is the main reason for having an individual mandate?

   Text box

2. Would you say that an individual mandate is beneficial or detrimental? Please explain your reasoning.

   Text box

3. *CONTROL GROUP.* If people have health insurance through their employer, do you think this would discourage them from quitting a bad job or switching job from fear of losing their health insurance?

   "ME" RANDOMIZATION. If you have or had health insurance through your employer, do you think this would discourage you from quitting a bad job and switching job for fear of losing your health insurance?

   "WOMEN" RANDOMIZATION. We would now like to ask you a few questions on the effects of changes in health care policy on women

   If women have health insurance through their employer, do you think this would discourage them from quitting a bad job or switching job from fear of losing their health insurance?

   Yes; No

4. *CONTROL GROUP.* If health insurance were to be made more generous, to what extent would it encourage people towards the following behaviors?

   "ME" RANDOMIZATION. If your health insurance were to be made more generous, to what extent would it encourage you towards the following behaviors?

   "WOMEN" RANDOMIZATION. If health insurance were to be made more generous, to what extent would it encourage women towards the following behaviors?

   A great deal; A lot; A moderate amount; A little; None at all

   - Make less use of the emergency room for conditions that do not warrant it
   - Use more medical services they do not really need simply because they do not have to pay the full cost of them

- Use more preventive medical care such as regular screenings and check-ups

5. Do you agree or disagree with the following statement?

   CONTROL GROUP. "With less generous health insurance, health in the U.S. would be worse since many people could not afford sufficient and appropriate medical care."

   "ME" RANDOMIZATION. " With less generous health insurance, my health would be worse since I could not afford sufficient and appropriate medical care."

   "WOMEN" RANDOMIZATION. "With less generous health insurance for women's health issues, health in the U.S. would be worse since many women could not afford sufficient and appropriate medical care."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

6. Do you agree or disagree with the following statement?

   CONTROL GROUP. "More generous health insurance coverage for preventive care can lead to a reduction in total medical costs, since medical issues would be caught early on before they turn into more serious and expensive health conditions and because many medical problems could be avoided altogether."

   "ME" RANDOMIZATION. " More generous health insurance coverage for preventive care can lead to a reduction of my total medical costs, since it would allow me to catch medical issues early on before they turn into more serious and expensive health conditions and because many medical problems could be avoided altogether."

   "WOMEN" RANDOMIZATION. "More generous health insurance coverage for preventive care for women can lead to a reduction in total medical costs, since women's medical issues would be caught early on before they turn into more serious and expensive health conditions and because many medical problems could be avoided altogether."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

7. Do you agree or disagree with the following statement?

8. *CONTROL GROUP.* "More generous health insurance can help people deal with unexpected large medical costs. It can thus reduce financial stress and debt built up to pay the medical bills for families."

   "ME" RANDOMIZATION. "More generous health insurance could help me deal with unexpected large medical costs. It can thus reduce my financial stress and I won't have to build up debt to pay the medical bills for my family."

   "WOMEN" RANDOMIZATION. "More generous health insurance can help women deal with unexpected large medical costs. It can thus reduce women's financial stress and debt built up to pay the medical bills for women's health issues."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

9. *CONTROL GROUP.* Would you say that it is fair or unfair that people with pre-existing conditions have to pay more for their health insurance than people without pre-existing conditions?

"ME" RANDOMIZATION. (If "Male" or "Female" is selected to "What is your Gender) double check that formatting is ok here, but this appears in the qualtrics for 'you' but not 'control'"Would you say that it is fair or unfair if you had to pay more for your health insurance than people with fewer pre-existing conditions than you?

"WOMEN" RANDOMIZATION. Would you say that it is fair or unfair that women with pre-existing conditions have to pay more for their health insurance than women without pre-existing conditions?

Very fair; Somewhat fair; Somewhat unfair; Very unfair

10. *"ME" RANDOMIZATION* (If "Male" or "Female" is selected to "What is your Gender) double check that formatting is ok here, but this appears in the qualtrics for 'you' but not 'control' Is it fair or unfair if you had to pay more health care of insurance than people born with better help than you?

    Very fair; Somewhat fair; Somewhat unfair; Very unfair

11. *CONTROL GROUP.* Is it fair or unfair that people born with worse health have to pay more for health care or insurance than people born with better health?

    "ME" RANDOMIZATION. Is it fair or unfair if you had to pay more for health care or insurance than people born with better health than you?

    "WOMEN" RANDOMIZATION. Is it fair or unfair that women born with worse health have to pay more for health care or insurance than women born with better health?

    Very fair; Somewhat fair; Somewhat unfair; Very unfair

12. *CONTROL GROUP.* Would you say that health issues and medical conditions are mostly the result of circumstances outside of one's control or mostly the result of one's own actions?

    Mostly the result of circumstances outside of one's control; Mostly the result of one's own actions

    "ME" RANDOMIZATION. Would you say that your own health issues and your own medical conditions are mostly the result of circumstances outside of your control or mostly the result of your own actions?

    Mostly the result of circumstances outside of my own control; Mostly the result of my own actions

    "WOMEN" RANDOMIZATION. Would you say that health issues and medical conditions that arise for women are mostly the result of circumstances outside of their control or mostly the result of these women's own actions?

    Mostly the result of circumstances outside of women's control; Mostly the result of women's own actions

13. Let us consider the following statement about health care and health insurance. Please tell us whether you agree or disagree with it.

    CONTROL GROUP. "It is important that everyone can afford health care because people who become sick with a contagious disease that is not treated can have negative effects on others too."

    "ME" RANDOMIZATION. "It is important that I am able to afford health care because if I became sick with a contagious disease that is not treated, I can have negative effects on others too."

    "WOMEN" RANDOMIZATION. "It is important that all women can afford proper health care because women who become sick with a contagious disease that is not treated can have negative effects on others too."

Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

14. Let us consider the following statement about health care and health insurance. Please tell us whether you agree or disagree with it.

    CONTROL GROUP. "It is important to help low-income families so that they can afford medical care by subsidizing their insurance premiums or by giving them transfers for medical care."

    "ME" RANDOMIZATION. "It is important to help families like mine so that they can afford medical care by subsidizing our insurance premiums or by giving us transfers for medical care."

    "WOMEN" RANDOMIZATION. "It is important to help low-income women so that they can afford medical care by subsidizing their insurance premiums or by giving them transfers for medical care."

    Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

15. *"WOMEN" RANDOMIZATION.* If you had to choose, which comes closest to your view?

    "Employers who have religious objections to the use of birth control should be...

    ... able to refuse to provide it in health insurance plans for their employees."; ... required to provide it in health insurance plans for their employees just as other employers are required to do."

16. *"WOMEN" RANDOMIZATION.* Would you find it fair or unfair that women who use birth control methods pay for the cost of birth control on their own?

    Very fair; Fair; Unfair; Very unfair

17. *"WOMEN" RANDOMIZATION.* Should women who are planning on using birth control methods have increased insurance copays because they might cost more for their insurers?

    Yes; No

18. *"WOMEN" RANDOMIZATION.* Do you favor or oppose a law allowing pharmacists and health providers to opt out of providing medicine or surgical procedures that result in abortion?

    Strongly favor; Favor; Oppose; Strongly oppose

19. *"WOMEN" RANDOMIZATION.* Should insurance providers have to cover medicine or surgical procedures that result in abortion?

    Yes; No

A-2.7 Outcomes

1. Do you feel that access to health care in the U.S. today is fair for everyone, even for low-income families, or do you feel that access to healthcare should be improved for many families?

    Access to health care is fair even for low-income families; Access to health care should be improved for many families

2. How fair would you say the current U.S. health insurance system is?

    Very fair; Somewhat fair; Somewhat unfair; Very unfair

3. How satisfied or dissatisfied are you with health insurance in the U.S.?

   Very satisfied; Somewhat satisfied; Somewhat dissatisfied; Very dissatisfied

4. When a big news story breaks people often go online to get up-to-the-minute details on what is going on. We want to know which websites people trust to get this information. We also want to know if people are paying attention to the question. To show that you've read this much, please ignore the question and select ABC News and The Drudge Report as your two answers.

   When there is a big news story, which is the one news website that you would visit first? (Please only choose one)

   ABC News; The Wall Street Journal; FOX News; The Drudge Report; New York Post; CNBC; The Mercury News; USA Today; Other news website

5. As you may know, some have proposed a "Medicare-for-all" single payer health insurance program that would be administered by the federal government and financed through taxes. Please tell us if you favor or oppose this proposal, or if you don't know enough to say?

   Favor; Neither favor nor oppose; Oppose; Strongly oppose; Don't know enough to say

6. Do you support or oppose providing additional transfers or subsidies to low-income families to help them with the costs of their health care?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

7. Do you support or oppose having an individual mandate whereby every individual is obliged to buy health insurance?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

8. Do you support or oppose having an employer mandate whereby every large employer, with more than 50 employees, is obliged to offer health insurance plans for their employees?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

9. Imagine it were up to you to design Americans' health insurance plans such that they are most cost-effective and that patients get the best care while having to pay the lowest insurance premiums.

   For the following types of medical care, please say which ones should receive: full coverage (the patient pays no costs out of pocket); generous coverage (the patient has only minimal copay or deductibles); low coverage (costs are shared and the patient bears a significant share of total costs); no coverage (meaning the patient has to pay the full costs out of pocket). Bear in mind that the more generous coverage is, the higher health insurance premiums can be expected to be.

   - Preventive care (e.g.: annual physical examinations, recommended cancer screening, or immunizations)
   - Primary care visits for non-life threatening conditions (e.g.: for a cold, flu, or stomach bug)
   - Maternity and newborn care (pre-natal screenings and check-ups, birth and delivery, newborn screening and care)
   - Specialist visits for non-essential care (e.g.: elective hip replacement, hearing aids)

- Medical care for catastrophic situations (e.g.: long-run medical care after bad accidents or serious injuries once one leaves the emergency room; intensive treatment for cancers; management of serious, long-term hear and liver conditions)
- Emergency room care (emergency, short-term care after accidents, severe illness, life-threatening conditions that require immediate attention)
- Pediatric care (medical care for children)

Full coverage; Generous coverage; Low coverage; No coverage

Cannot locate this in the qualtrics! Will make each of these items as comments for now - maybe the final draft of the survey did not include these questions

A-2.8 General Outcomes

For these different groups, please tell us if you think that they're are paying their fair share in federal taxes, paying too much, or paying too little?

1. High-income households...

   ... pay much more than their fair share in income taxes.; ... pay more than their fair share in income taxes.; ... pay their fair share in income taxes.; ... pay less than their fair share in income taxes.; ... pay much less than their fair share in income taxes.

2. Middle-class households...

   ... pay much more than their fair share in income taxes.; ... pay more than their fair share in income taxes.; ... pay their fair share in income taxes.; ... pay less than their fair share in income taxes.; ... pay much less than their fair share in income taxes.

3. Take the following government services. For each of them, say if would you like it to receive increased funding (even if that means more taxes or reduced spending in other areas), decreased spending (in order to reduce taxes or increase spending elsewhere) or would you like for its funding to be left unchanged?

   - Transfers and income support programs for those out of work
   - Better schools for children from low-income families
   - Income support and retraining programs for workers who are displaced by international competition and trade
   - Subsidies for low-income households to help them with the costs of health insurance premiums and health care
   - Wage subsidies and help for the working poor who work for low wages

A-2.9 Knowledge about Policy

As you probably know, the government and researchers gather a lot of statistical information about the economy. We are interested in learning whether this information finds its way to the general public. The

next set of questions is about some economic policies in the United States. These are questions for which there are right or wrong answers.

In order for your answers to be most helpful to us, it is really important that you answer these questions as accurately as you can and without consulting any external sources. Although you may find some questions difficult, it is very important for our research that you try your best. Thank you very much!

1. Out of 100 Americans, how many do not have health insurance?

   Slider going from 0 to 100

2. Can you think of the different ways in which Americans today obtain health insurance? Please list all you can think of.

   Six Text Boxes

3. What is Medicaid? Who is eligible for Medicaid?

   Text Box

4. What is Medicare? Who is eligible for Medicare?

   Text Box

5. If an elderly person is in need of long-term care, which program(s) will pay for that? Select all correct answers from the list below (several answers can be correct):

   Note: Long-term care means assistance with the basic personal tasks of everyday life for elderly people.

   Note: Selection can include multiple answers (not in the survey explicitly but want to make clear here - can double check

   Medicare will pay for all of long-term care for all elderly above 65; Medicare supplements will pay for all of long-term care for elderly who purchase them; Medicare with or without supplements will only pay for short periods of long-term care for all the elderly above 65; Private long-term care insurance plans will only pay for long-term care for all elderly who purchased them; Employer health insurance plans will pay for the long-term care of retired employees; Medicaid will pay for all of long-term care for all elderly; Medicaid will pay for all of long-term care only for elderly who have a low income and low assets ; Medicaid will pay part of the long-term care for all the elderly

6. (Not a Question) thought this might clarify things - make sure formatting is ok Medicaid is a federal and state program that helps people with low income pay for their health insurance.

   Medicare is a federal program that provides health insurance for Americans aged 65 and older, as well as younger people with disability status.

7. Out of 100 Americans, how many get their health insurance coverage through the following programs? The total must equal 100.

   Important note: Individuals can be enrolled in several programs at once. Here, we are interested in the primary insurer. An individual who has Medicaid and any other type of insurance is counted in the Medicaid category and an individual who has both Medicare and employer-based coverage is counted in the employer-based category.

- *Insert Number for* Medicaid
- *Insert Number for* Medicare
- *Insert Number for*Group health insurance through employer
- *Insert Number for*Other insurance (policies purchased directly from an insurance company, military, other public...)
- *Insert Number for*Uninsured
- *Insert Number for* Total

8. Out of 100 American adults aged 18 and greater, how many are on Medicaid?

   Slider going from 0 to 100

9. Out of 100 American children, aged below 18, how many are enrolled in Medicaid?

   Slider going from 0 to 100

10. Out of 100 Americans, how many are on Medicare?

    Slider going from 0 to 100

11. Out of 100 Americans, how many get group health insurance through their employers?

    Slider going from 0 to 100

12. Are insurance companies currently allowed to set different premiums based on the following characteristics?

    (a) Gender

    (b) Age

    (c) Tobacco use

    (d) Where the person lives

    (e) Pre-existing conditions (such as having diabetes, obesity, or being pregnant at the time of purchase of the insurance)

    Yes; No

13. In 2018, was there an individual mandate, whereby everyone was obligated to buy health insurance?

    Yes; No

14. What happened if you did not have health insurance?

    A penalty had to be paid; You were forced to buy insurance; You received a warning; Nothing happened

15. Were any changes made to the individual mandate in 2019?

    Yes; No

16. How did the legislation on the individual mandate change in 2019?

    The penalty was decreased; The penalty was reduced to zero; The individual mandate was canceled; Other

17. Is there currently an employer mandate, whereby employers have to provide health insurance to their employees?

    Yes, all employers are required to provide health insurance to their employees; Yes, but small employers are excluded from this requirement; No, employers are not required to provide health insurance to their employees

18. To be eligible for Medicaid, a family's income needs to be below a certain percentage of the Federal Poverty Level for a family of that size. How high is that percentage in your state for a family like yours to be eligible for Medicaid?

    Under 50% of the FPL; Between 50 and 90% of the FPL; Between 90 and 130% of the FPL; Between 130 and 160% of the FPL; Between 160 and 200% of the FPL; Higher than 200% of the FPL;

19. Please specify the exact percentage

    Text box

20. Did the Affordable Care Act (ACA) make any changes to the eligibility for Medicaid in your state?

    No, it remained the same; Yes, it reduced eligibility

21. In order to facilitate our research on decision making we are interested in knowing certain factors about you, the decision maker. Specifically, we are interested in whether you actually take the time to read the directions; if not, then some of our manipulations that rely on changes in the instructions will be ineffective. So, in order to demonstrate that you have read the instructions, please ignore the question below. Instead, simply put the slider at 98. Thank you very much.

    Out of 100 adults in the U.S., how many are currently paying any income tax at all?

    Slider going from 0 to 100

22. Comparing the U.S. to other rich countries such as France, Germany, or the U.K., how much do you think the U.S. spends on health care as a share of its GDP?

    More; About the same; Less; Much less

23. Comparing the U.S. to other rich countries such as France, Germany, or the U.K., how good do you think that important and common measures of health outcomes, such as life expectancy or infant mortality are in the U.S.?

    Much better; Better; About the same; Worse; Much worse

A-2.10 Government Questions (Specific)

1. To improve access to health care for all Americans, rich or poor, the government (at the local, state, or federal level) has the ability and the tools to do:

    Nothing at all; Not much; Some; A lot

A-2.10.1 Government Questions (General)

1. How much of the time do you think you can trust our federal government to do what is right?

   Almost always; A lot of the time; Not very often; Almost never

2. Some people think the government is trying to do too many things that should be left to individuals and businesses. Others think that government should do more to solve our country's problems. Which come closer to your own view?

   Government is doing too much; Government is doing just the right amount; Government should do more

3. Next, we'd like you to think more broadly about the purposes of government.

   Where would you rate yourself on a scale of 1 to 5, where 1 means you think the government should do only those things necessary to provide the most basic government functions, and 5 means you think the government should take active steps in every area it can to try and improve the lives of its citizens?

   You may use any number from 1 to 5.

   1; 2; 3; 4; 5

4. Of every tax dollar that goes to the federal government in Washington, D.C., how many cents would you say are wasted?

   Slider going from 0 to 100

5. How satisfied are you with the way the federal government in Washington is dealing with the problems the country is facing today?

   Very satisfied; Somewhat satisfied; Somewhat dissatisfied; Very dissatisfied

6. Consider now a list of functions the federal government could serve.

   On a 1 to 5 scale, please say how much responsibility you think the government should have for each — with 1 meaning the government should have no responsibility at all and 5 meaning the government should have total responsibility in this area:

   - Reducing income differences between the rich and the poor
   - Reducing the transmission of wealth from one generation to the other
   - Making sure Americans have adequate health care
   - Reducing the differences in opportunities between children from wealthy and poor families
   - Regulating trade to and from the U.S. to protect American producers and consumers
   - Maintaining a stable financial system and ensuring that credit markets work
   - Ensuring a stable dollar
   - Providing a minimum standard of living for all

   No responsibility - 1; 2; 3; 4; Total responsibility - 5

A-2.11 POST - Willingness to pay for information

By taking this survey, you are automatically enrolled in a lottery to win $1000. In a few days you will know whether you won the $1000. The payment will be made to you in the same way as your regular survey pay, so no further action is required on your part.

Are you are interested in learning the correct answers to all the questions about (income taxation/estate taxation/health insurance/trade policy) in the U.S.? If you are, you can forfeit part of your gain (should you win the lottery) in exchange for the correct answers. If you select that option, you will be given the right answers on the next page. You will only pay the amount selected if you do, in fact, win the lottery.

Note: This information would be very hard to find online on your own. It is the result of a lot of careful research and you cannot easily find the correct answers.

In case you win the lottery are you willing to give up ($1 / $2 / $5 / $10 [2]) to receive all the correct answers to the questions about trade policy in the U.S.?

No, I am not willing to pay anything (We will not provide you with the correct answers); Yes, I am willing to pay $1 / $2 / $5 / $10 (We will provide you with all the correct answers on the next page. You will only pay this amount out of your lottery earnings if you do win the lottery).

A-2.12 True answers

If respondent answers "Yes" to A-2.11

1. Correct answers.

   Out of 100 Americans, 9 are uninsured, 21 are on Medicaid, 14 on Medicare, 49 on a group employer-based plan and 8 on another type of insurance.

   Out of 100 American children ages below 18, 37 are enrolled in Medicaid.

   Insurance companies are currently allowed to set different premiums based on the following characteristics: age, where you live, tobacco use. Insurance companies are currently not allowed to set different premiums based on gender and pre-existing conditions.

   As of 2018, there was an individual mandate, whereby everyone is obligated to purchase health insurance. If you did not have insurance, you had to pay a fine. A law enforced in 2019 reduced the fine to $0 (but did not technically cancel the individual mandate).

   There is currently an employer mandate, whereby employers have to provide health insurance to their employees. Small employers with fewer than 20 employees, however, are excluded from this requirement.

2. Medicaid eligibility by state and family size.

   The following states expanded Medicaid eligibility under the Affordable Care Act, thereby setting the eligibility for families of all sizes to 138% of the Federal Poverty Level:

   Alaska; Arizona; Arkansas; California; Colorado; Connecticut; Delaware; Hawaii; Idaho; Illinois; Indiana; Iowa; Kentucky; Louisiana; Maine; Maryland; Massachusetts; Michigan; Minnesota; Montana;

[2] Note: the amount is randomized among participants

Nebraska; Nevada; New Hampshire; New Jersey; New Mexico; New York; North Dakota; Ohio; Oregon; Pennsylvania; Rhode Island; Utah; Vermont; Virginia; Washington; West Virginia.

3. In the other states, the eligibility works as follows for families of different sizes:

In the other states, the eligibility works as follows for families of different sizes:

State	1	2	3	4	5 or more
Alabama	18%	18%	18%	18%	18%
Florida	33%	33%	33%	33%	33%
Georgia	0%	38.35%	36.84%	36.24%	35.69% to 35.39%
Kansas	38%	38%	38%	38%	38%
Mississippi	22.44%	22.31%	22.18%	22.09%	22.07% to 21.94%
Missouri	22%	22%	22%	22%	22%
North Carolina	42.90%	41.48%	38.52%	35.57%	33.61%
Oklahoma	44.98%	44.98%	44.99%	44.99%	44.99%
South Carolina	62%	62%	62%	62%	62%
South Dakota	60.69%	56.28%	50.99%	47.33%	44.87% to 40.38%
Tennessee	100.63%	96.89%	93.03%	89.26%	85.74% to 79.58%
Wisconsin	100%	100%	100%	100%	100%
Wyoming	52.29%	53.73%	50.41%	47.76%	48.62% to 55.84%

Texas distinguishes between 1-parent and 2-parent families:

Family size	1-parent family	2-parent family
1	10,18%	-
2	14,29%	11,74%
3	13,28%	14,49%
4	13,24%	13,63%
5 or more	12,64%	13,54%

Finally, the District of Columbia's eligibility level is 221% of FPL for parents with dependent children and 215% of FPL for other, non-elderly adults.

4. Are you surprised by these numbers?

   Yes; No

5. What did you find particularly surprising?

   Text Box

A-2.13 Self-reported questions

1. It is vital to our study that we only include responses from people that devoted their full attention to this study. Otherwise years of effort (the researchers' and the time of other participants) could be wasted. You will receive credit for this study no matter what, however, please tell us how much effort you put forth towards this study.

   I put forth almost no effort; I put forth very little effort; I put forth some effort; I put forth quite a bit of effort; I put forth a lot of effort

2. Also, often there are several distractions present during studies (other people, TV, music, etc.). Please indicate how much attention you paid to this study. Again, you will receive credit no matter what. We appreciate your honesty!

   I gave this study almost no attention; I gave this study very little attention; I gave this study some of my attention; I gave this study most of my attention; I gave this study my full attention

A-2.14 Bias and Feedback

1. Do you feel that this survey was biased?

   Yes, left-wing bias; Yes, right-wing bias; No, it did not feel bias

2. Please feel free to give us any feedback or impression regarding this survey.

   Text Box

A-2.15 Consent Page

Academic Research Survey We are a non-partisan group of academic researchers from the Economics Department at Harvard University. Our goal is to learn about people's attitudes on several issues. Please read the information below before consenting to begin the research study.

- This survey is voluntary. You have the right to not answer any question, and to stop the survey at any time or for any reason (to exit the survey, simply close this window). We expect that it will take about 20 minutes. You will likely learn a lot!
- Your name will never be recorded by researchers. Results may include summary data, but you will never be identified. The data will be stored on Harvard servers and will be kept confidential. The collected anonymous data may be made available to other researchers for replication purposes.
- You will be compensated for this interview conditional upon (i) completing the survey and (ii) passing our survey quality checks, which use sophisticated statistical control methods to detect incoherent and rushed responses. **Responding without adequate effort may result in your responses being flagged for low quality and you may not receive your payment.**

Please note that it is very important for the success of our research that you **answer honestly** and **read the questions very carefully** before answering. If at any time you don't know an answer, please give your best guess **without consulting any external sources.** However, please be sure to spend enough time reading and understanding the questions.

You are encouraged to print or take a screenshot of this page for your records. If you have any questions about this study, you may contact us at studysocialsciences2018@gmail.com.

This research has been reviewed and approved by the Harvard University Area Institutional Review Board ("IRB"). You may talk to them at (617) 496-2847 or cuhs@harvard.edu if:

- Your questions, concerns, or complaints are not being answered by the research team.
- You cannot reach the research team.
- You want to talk to someone besides the research team.
- You have questions about your rights as a research subject.
- You want to get information or provide input about this research.

Yes, I would like to take part in this study, and confirm that I LIVE IN THE U.S., and I am 18 or older; No, I would not like to participate

A-3 2025 Questionnaire

A-3.1 Background questions

1. What is your gender?

   Male; Female; Other

2. What is your age?

3. What was your TOTAL household income, before taxes, last year?

   $0-$9999; $10000-$14999; $15000-$19999; $20000-$29999; $30000-39999; $40000-$49999; $50000-$69999; $70000-$89999; $90000-$109999; $110000-$149999; $150000-$199999; $200000+

4. Were you born in the United States?

   Yes; No

5. In what state or U.S. territory were you born?

   Alabama; Alaska; Arizona; Arkansas; California; Colorado; Connecticut; Delaware; District of Columbia; Florida; Georgia; Hawaii; Idaho; Illinois; Indiana; Iowa; Kansas; Kentucky; Louisiana; Maine; Maryland; Massachusetts; Michigan; Minnesota; Mississippi; Missouri; Montana; Nebraska; Nevada; New Hampshire; New Jersey; New Mexico; New York; North Carolina; North Dakota; Ohio; Oklahoma; Oregon; Pennsylvania; Rhode Island; South Carolina; South Dakota; Tennessee; Texas; Utah; Vermont; Virginia; Washington; West Virginia; Wisconsin; Wyoming; American Samoa; Guam; Northern Mariana Islands; Puerto Rico; Virgin Islands

6. In which ZIP code do you live?

   Text box

7. Please indicate your marital status

   Single; Married; Legally separated or divorced; Widowed

8. How many children do you have?

   I do not have children; 1; 2; 3; 4; 5 or more

9. *Screening Question 1.* Most modern theories of decision making recognize that decisions do not take place in a vacuum. Individual preferences and knowledge, along with situational variables can greatly impact the decision process. To demonstrate that you've read this much, just go ahead and select both strongly agree and strongly disagree among the alternatives below, no matter what your opinion is.

   Do you agree or disagree with the following statement: "It is easy to find accurate and reliable information in the media these days."

   Strongly agree; Agree; Disagree; Strongly disagree

10. How would you describe your ethnicity/race?

    European American/White; African American/Black; Hispanic/Latino; Asian/Asian American; Mixed race; Other (please specify)

11. Which category best describes your highest level of education?

    Eighth Grade or Lower; Some High School; High School degree/GED; Some College; 2-year College Degree; 4-year College Degree; Master's Degree; Doctoral Degree; Professional Degree (JD, MD, MBA)

12. (If highest level of education superior to "High School" to 11) What is/was your field of study in college? If multiple degrees apply, please select the field corresponding to your last degree.

    Accounting/bookkeeping; Administrative science/public administration; Advertising; Agriculture/ horticulture; Allied health; Anthropology; Architecture; Art; Aviation/aeronatics; Biology; Business administration; Chemistry; Child/human/family development; Comm. disorders; Communications/speech; Computer science; Counseling; Criminology/criminal justice; Dance; Dentistry; Economics; Education; Educational administration; Electronics; Engineering; English; Environmental science/ecology; Ethnic studies; Fashion; Finance; Fine arts; Food science/nutrition/culinary arts; Foreign language; Forestry; General sciences; General studies; Geography; Geology; Gerontology; Health; History; Home economics; Human services/human resources; Humanities; Industrial relations; Industry and techn; Information technology; Journalism; Law; Law enforcement; Liberal arts; Library science; Marketing; Mathematics; Mechanics/machine trade; Medicine; Music; Nursing; Other; Other vocational; Parks and recreation; Pharmacy; Philosophy; Physical education; Physics; Political science/international relations; Psychology; Public relations; Social sciences; Social work: Sociology; Special education; Statistics/biostatistics; Television/film; Textiles/cloth; Theater arts; Theology; Urban and regional planning; Veterinary medicine; Visual arts/graphic design/design and drafting; Other

13. What is your current employment status?

    Full-time employee; Part-time employee; Self-employed or small business owner; Unemployed and looking for work; Student; Not currently working and not looking for work; Retiree

14. If you had to use one of these five commonly-used names to describe your social class, which one would it be?

    Lower Class or Poor; Working Class; Middle Class; Upper-middle Class; Upper Class

15. On economic policy matters, where do you see yourself on the liberal/conservative spectrum?

    Very liberal; Liberal; Moderate; Conservative; Very conservative

16. What do you consider to be your political affiliation, as of today?

    Republican; Democrat; Independent; Other; Non-Affiliated

17. (If "Other" to 16) Please specify your political affiliation:

    Text box

18. Did you vote in the last presidential election?

    Yes; No

19. (If "Yes" to 18) In the last presidential election, you supported:

    Kamala Harris; Donald Trump; Jill Stein; Robert Kennedy; Other

20. (If "No" to 18) Even if you did NOT vote, please indicate the candidate that you were most likely to have voted for or who represents your views more closely.

    Kamala Harris; Donald Trump; Jill Stein; Robert Kennedy; Other

21. Did you vote in the November 2022 midterms elections?

    Yes; No

22. (If "Yes" to 21) Which party did you vote for?

    Republican Party; Democratic Party; Other

23. (If "No" to 21) Which party would you have liked to support?

    Republican Party; Democratic Party; Other

24. How knowledgeable do you consider yourself on economic policies and issues?

    Highly knowledgeable; Somewhat knowledgeable; Not very knowledgeable; Not knowledgeable at all

A-3.2 Open-ended questions

We now want to ask you a few broader questions. Please use the text boxes below and write as much as you feel like. Your opinion and thoughts are important to us! There is no right or wrong answer.

1. What would be a "good" health insurance system in your view? What would be the goal of a good health insurance system?
2. When you think about health insurance and whether the U.S. should have universal health insurance for all, what are the main considerations — in favor or against it — that come to you mind?
3. What do you personally see as the biggest problem with health insurance in the United States today?

A-3.3 Personal Exposure

1. Do you currently have health insurance?

    Yes; No

2. (If "No" to 1) Which of these are reasons why you stopped being covered or do not have health insurance?

    You may select several options.

    Lost job or change in employment; Change in marital status or death of parent; Ineligible due to age or left school; Employer didn't offer or insurance company refused; Cost; Medicaid stopped; Other (includes moved, self-employed, never had coverage, did not want or need coverage, and other unspecified reasons)

3. (If "Yes" to 1) Are you on Medicaid or Medicare?

    Yes; No

A-3.4 Knowledge about policy

As you probably know, the government and researchers gather a lot of statistical information about the economy. We are interested in learning whether this information finds its way to the general public. The next set of questions is about some economic policies in the United States. These are questions for which there are right or wrong answers.

In order for your answers to be most helpful to us, it is really important that you answer these questions as accurately as you can and without consulting any external sources. Although you may find some questions difficult, it is very important for our research that you try your best. Thank you very much!

1. What is Medicaid? Who is eligible for Medicaid?

   Text box

2. What is Medicare? Who is eligible for Medicare?

   Text box

3. **Medicaid** is a federal and state program that helps people with low income pay for their health insurance.

   Medicare is a federal program that provides health insurance for Americans aged 65 and older, as well as younger people with disability status.

4. Out of 100 Americans, how many get their health insurance coverage through the following programs? The total must equal 100.

   Important note: Individuals can be enrolled in several programs at once. Here, we are interested in the primary insurer. An individual who has Medicaid and any other type of insurance is counted in the Medicaid category and an individual who has both Medicare and employer-based coverage is counted in the employer-based category.

   - Medicaid
   - Medicare
   - Group health insurance through employer
   - Other insurance (policies purchased directly from an insurance company, military, other public. . .)
   - Uninsured

5. Out of 100 American children, aged below 18, how many are enrolled in Medicaid?

   Slider going from 0 to 100

6. Medicaid eligibility depends on family size, the age of each member, and the state you live in. To qualify, total household income must fall below a specific percentage of the Federal Poverty Level (FPL). For your family's size, ages, and state, what is that percentage?

   Under 50% of the FPL; Between 50 and 90% of the FPL; Between 90 and 130% of the FPL; Between 130 and 160% of the FPL; Between 160 and 200% of the FPL; Higher than 200% of the FPL;

7. Please specify the exact percentage

   Text box

8. Did the Affordable Care Act (ACA) make any changes to the eligibility for Medicaid in your state?

   Yes, it expanded eligibility; No, it remained the same; Yes, it reduced eligibility;

9. *Second screening question* In order to facilitate our research on decision making we are interested in knowing certain factors about you, the decision maker. Specifically, we are interested in whether you actually take the time to read the directions; if not, then some of our manipulations that rely on changes in the instructions will be ineffective. So, in order to demonstrate that you have read the instructions, please ignore the question below. Instead, simply put the slider to 98. Thank you very much.

   Out of 100 adults in the U.S., how many are currently paying any income tax at all?

   Slider going from 0 to 100

A-3.5 Medicare Treatment

Respondents are randomly assigned to one of three groups, labeled as "Medicare," "Medicaid," and "Control." In the first two cases, respondents are shown a video, different between the two treatment groups, while those in the control group are not. The videos are introduced by the following:

- Recent research has found uncovered new and important facts about a government program called Medicare/Medicaid. We will now show you a short video (with sound) that summarizes some key findings of these studies. Please pay attention to the information provided as you will be asked questions about it later. Do not skip forward or close the page while the video is running.

  Please proceed to the next page when you are ready. Note that you will not be able to move forward with the survey before the end of the short video. The video lasts about one minute.

Link to the videos can be found here:

- Medicare treatment
- Medicaid treatment

A-3.6 Mechanisms

1. If people have health insurance through their employer, do you think this would discourage them from quitting a bad job or switching job from fear of losing their health insurance?

   Yes; No

2. If health insurance were to be made more generous, to what extent would it encourage people towards the following behaviors?

   A great deal; A lot; A moderate amount; A little; None at all

   - Make less use of the emergency room for conditions that do not warrant it
   - Use more medical services they do not really need simply because they do not have to pay the full cost of them
   - Use more preventive medical care such as regular screenings and check-ups

3. Do you agree or disagree with the following statement?

   "With less generous health insurance, health in the U.S. would be worse since many people could not afford sufficient and appropriate medical care."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

4. Do you agree or disagree with the following statement?

   "More generous health insurance coverage for preventive care can lead to a reduction in total medical costs, since medical issues would be caught early on before they turn into more serious and expensive health conditions and because many medical problems could be avoided altogether."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

5. Do you agree or disagree with the following statement?

   "More generous health insurance can help people deal with unexpected large medical costs. It can thus reduce financial stress and debt built up to pay the medical bills for families."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

6. Would you say that it is fair or unfair that people with pre-existing conditions have to pay more for their health insurance than people without pre-existing conditions?

   Very fair; Somewhat fair; Somewhat unfair; Very unfair

7. Is it fair or unfair that people born with worse health have to pay more for health care or insurance than people born with better health?

   Very fair; Somewhat fair; Somewhat unfair; Very unfair

8. Would you say that health issues and medical conditions are mostly the result of circumstances outside of one's control or mostly the result of one's own actions?

   Mostly the result of circumstances outside of one's control; Mostly the result of one's own actions

9. Let us consider the following statement about health care and health insurance. Please tell us whether you agree or disagree with it.

   "It is important that everyone can afford health care because people who become sick with a contagious disease that is not treated can have negative effects on others too."

   Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

10. Let us consider the following statement about health care and health insurance. Please tell us whether you agree or disagree with it.

    "It is important to help low-income families so that they can afford medical care by subsidizing their insurance premiums or by giving them transfers for medical care."

    Strongly agree; Agree; Neither agree nor disagree; Disagree; Strongly disagree

11. If you had to choose, which comes closest to your view?

    "Employers who have religious objections to the use of birth control should be...

    ...able to refuse to provide it in health insurance plans for their employees."; ...required to provide it in health insurance plans for their employees just as other employers are required to do."

12. Would you find it fair or unfair that women who use birth control methods pay for the cost of birth control on their own?

    Very fair; Fair; Unfair; Very unfair

13. Should women who are planning on using birth control methods have increased insurance copays because they might cost more for their insurers?

    Yes; No

14. Do you favor or oppose a law allowing pharmacists and health providers to opt out of providing medicine or surgical procedures that result in abortion?

    Favor; Oppose; Strongly oppose

15. Should insurance providers have to cover medicine or surgical procedures that result in abortion?

    Yes; No

A-3.7 Specific Outcomes

1. Do you feel that access to health care in the U.S. today is fair for everyone, even for low-income families, or do you feel that access to healthcare should be improved for many families?

   Access to health care is fair even for low-income families; Access to health care should be improved for many families

2. How fair would you say the current U.S. health insurance system is?

   Very fair; Somewhat fair; Somewhat unfair; Very unfair

3. Do you support or oppose providing additional transfers or subsidies to low-income families to help them with the costs of their health care?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

4. Do you support or oppose having an individual mandate whereby every individual is obliged to buy health insurance?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

5. Do you support or oppose having an employer mandate whereby every large employer, with more than 50 employees, is obliged to offer health insurance plans for their employees?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

6. Imagine it were up to you to design Americans' health insurance plans such that they are most cost-effective and that patients get the best care while having to pay the lowest insurance premiums.

   For the following types of medical care, please say which ones should receive:

   full coverage (the patient pays no costs out of pocket); generous coverage (the patient has only minimal copay or deductibles); low coverage (costs are shared and the patient bears a significant share of total costs); no coverage (meaning the patient has to pay the full costs out of pocket).

Bear in mind that the more generous coverage is, the higher health insurance premiums can be expected to be.

Full coverage; Generous coverage; Low coverage; No coverage

- Preventive care (e.g.: annual physical examinations, recommended cancer screening, or immunizations)
- Primary care visits for non-life threatening conditions (e.g.: for a cold, flu, or stomach bug)
- Maternity and newborn care (pre-natal screenings and check-ups, birth and delivery, newborn screening and care)
- Specialist visits for non-essential care (e.g.: elective hip replacement, hearing aids)
- Medical care for catastrophic situations (e.g.: long-run medical care after bad accidents or serious injuries once one leaves the emergency room; intensive treatment for cancers; management of serious, long-term hear and liver conditions)
- Emergency room care (emergency, short-term care after accidents, severe illness, life-threatening conditions that require immediate attention)
- Pediatric care (medical care for children)

7. Do you support or oppose lowering the age after which people become eligible for Medicare, so that younger people are covered?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

8. Do you support or oppose making Medicare more generous by expanding the services it covers?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

9. Do you support or oppose expanding Medicaid so that more people are eligible for it?

   Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

10. Do you support or oppose making Medicaid more generous by expanding the services it covers?

    Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

11. Do you support or oppose an expansion of U.S. government-provided health insurance, reducing people's reliance on employer-provided insurance?

    Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose

12. As you may know, some have proposed a "Medicare-for-all" single payer health insurance program that would be administered by the federal government and financed through taxes. Please tell us if you favor or oppose this proposal, or if you don't know enough to say?

    Strongly support; Support; Neither support nor oppose; Oppose; Strongly oppose; Don't know enough to say

A-3.8 Government Questions (General)

1. How much of the time do you think you can trust our federal government to do what is right?

   Almost always; A lot of the time; Not very often; Almost never

2. Some people think the government is trying to do too many things that should be left to individuals and businesses. Others think that government should do more to solve our country's problems. Which come closer to your own view?

   Government is doing too much; Government is doing just the right amount; Government should do more

3. Next, we'd like you to think more broadly about the purposes of government.

   Where would you rate yourself on a scale of 1 to 5, where

   - 1: you believe the government should limit itself to providing the most basic and essential functions for its citizens
   - 5: you believe the government should be active in all areas where it can improve citizens' lives

   You may use any number from 1 to 5.

   1; 2; 3; 4; 5

A-3.9 Feedback

1. Do you feel that this survey was biased?

   Yes, left-wing bias; Yes, right-wing bias; No, it did not feel bias

2. Please feel free to give us any feedback or impression regarding this survey. *Text box*

A-3.9.1 Consent Page

Academic Research Survey We are a non-partisan group of academic researchers from the Economics Department at Harvard University. Our goal is to learn about people's attitudes on several issues. Please read the information below before consenting to begin the research study.

- This survey is voluntary. You have the right to not answer any question, and to stop the survey at any time or for any reason (to exit the survey, simply close this window). We expect that it will take about 20 minutes. You will likely learn a lot!
- Your name will never be recorded by researchers. Results may include summary data, but you will never be identified. The data will be stored on Harvard servers and will be kept confidential. The collected anonymous data may be made available to other researchers for replication purposes.
- You will be compensated for this interview conditional upon (i) completing the survey and (ii) passing our survey quality checks, which use sophisticated statistical control methods to detect incoherent and rushed responses. **Responding without adequate effort may result in your responses being flagged for low quality and you may not receive your payment.**

Please note that it is very important for the success of our research that you **answer honestly** and **read the questions very carefully** before answering. If at any time you don't know an answer, please give your best guess **without consulting any external sources.** However, please be sure to spend enough time reading and understanding the questions.

You are encouraged to print or take a screenshot of this page for your records. If you have any questions about this study, you may contact us at studysocialsciences2018@gmail.com.

This research has been reviewed and approved by the Harvard University Area Institutional Review Board ("IRB"). You may talk to them at (617) 496-2847 or cuhs@harvard.edu if:

- Your questions, concerns, or complaints are not being answered by the research team.
- You cannot reach the research team.
- You want to talk to someone besides the research team.
- You have questions about your rights as a research subject.
- You want to get information or provide input about this research.

  Yes, I would like to take part in this study, and confirm that I LIVE IN THE U.S., and I am 18 or older; No, I would not like to participate

A-4 Definition of Variables

Core Respondents' Characteristics:

Women: respondent is female.
Men: respondent is male.
Age 18-29: respondent's age is between 18 and 29 years.
Age 30-49: respondent's age is between 30 and 49 years.
Age 50-69: respondent's age is between 50 and 69 years.
White: respondent's ethnicity is European American/White .
Black: respondent's ethnicity is African American/Black .
Hispanic: respondent's ethnicity is Hispanic/Latino .
Low Income: respondent's household income is below $39 000.
Middle Income: respondent's household income is between $40 000- $69 000.
High Income: respondent's household income is above $70 000.
Upper Class (self-reported): respondent's self-reported social class is upper-middle class or upper class.
Republican: respondent's political affiliation is republican.
Democrat: respondent's political affiliation is democrat.
Independent and others: respondent's political affiliation is independent or other or he is non-affiliated.
Trump Conservative: respondent supported Trump in the last presidential elections and has "conservative" or "very conservative" views on economic policy matters.
Trump Moderate: respondent supported Donald Trump in the last presidential elections and has "moderate views" on economic policy matter.
Clinton Moderate: respondent supported Hillary Clinton in the last presidential elections and has "moderate" views on economic policy matters.
Clinton Liberal: respondent supported Hillary Clinton in the last presidential elections and has "liberal" or "very liberal" views on economic policy matters.
Economics related major: respondent has a college degree with an economics-related major.
College degree: respondent has a college degree .
Policy knowledge: respondent self-reports being "highly knowledgeable" or "somewhat knowledgeable" on economic policies and issues.
No policy knowledge: respondent self-reports being "not very knowledgeable" or "not knowledgeable at all" on economic policies and issues.
"ME" randomization: respondent was randomized to see the mechanisms questions personally formulated.
"WOMEN" randomization: respondent was randomized to see the mechanisms questions formulated about women rather than people in general.
Redistribution T: respondent was randomized to see the information treatment focused on the distributional impacts of the policies.
Efficiency T: respondent was randomized to see the information treatment focused on the efficiency costs of the policies.
Economist T: respondent was randomized to see the information treatment focused on both efficiency costs and distributional impacts of the policies.

Mechanisms and Outcomes

Less use of emergency rooms: dummy equals one if the respondent believes that more generous insurance would encourage a lot or a great deal people (in the control group), the respondent themselves (in the "ME" randomization), women (in the "WOMEN" randomization) to make less use of the emergency room for

conditions that do not warrant it.

Larger use of medical services: dummy equals one if the respondent believes that more generous insurance would encourage a lot or a great deal people (in the control group), the respondent themselves (in the "ME" randomization), women (in the "WOMEN" randomization) to use more medical services they do not really need simply because they do not have to pay the full cost of them.

*Larger use of preventive care:*dummy equals one if the respondent believes that more generous insurance would encourage a lot or a great deal people (in the control group), the respondent themselves (in the "ME" randomization), women (in the "WOMEN" randomization) to use more preventive medical care such as regular screenings and check-ups.

Employer-Insurance discourage quit job: dummy equals one if respondent believes that employer-provided health insurance would discourage people (in the control group), the respondent themselves (in the "ME" randomization), women (in the "WOMEN" randomization) from quitting a bad job or switching job from fear of losing their health insurance

Behavioral index: index that combines the answers to the behavioral responses to more generous insurance and employer-provided insurance following the methodology in Kling et al. (2007).

Arguments for health insurance, equity: Index that captures if the respondent is in favor of having a health insurance for equity reasons. It combines both open-ended questions on the reasons to have an individual mandate and and multiple-choice questions on the reasons for having health insurance in general. Specifically, it combines the variables: "More generous health insurance can help people deal with large medical costs and reduce their financial stress;" "Unfair that people with pre-existing conditions have to pay more for health insurance;" "Unfair that people born with worse health have to pay more for health insurance;" "Health issues and medical conditions are mostly result of circumstances outside one's control;" "Important to help low-income families afford medical care by subsidizing insurance;" "Support providing additional transfers or subsidies to low-income families for costs of health care."

Arguments for health insurance, efficiency: Index that captures if the respondent is in favor of having a health insurance for efficiency reasons. It combines both open-ended questions on the reasons to have an individual mandate and and multiple-choice questions on the reasons for having health insurance in general. Specifically, it combines the following variables "more generous insurance encourages to make less use of the emergency room;" "more generous insurance encourages to use more preventive care;" "More generous health insurance coverage for preventive care can lead to a reduction of the total costs;" "Important that everyone afford health care because contagious diseases can have negative effects on the other people."

Health in US worse off if ↓ insurance: dummy equals 1 if respondent agrees or strongly agrees that with less generous health insurance, health in the U.S. (in the control group), the respondent own's health (in the "ME" randomization), women's health (in the "WOMEN" randomization) would be worse since they could not afford sufficient and appropriate medical care .

↑ preventive healthcare, ↓ costs: dummy equals 1 if the respondent agrees or strongly agrees that more generous health insurance coverage for preventive care can lead to a reduction in total medical costs (in the control group), to a reduction of the respondent own total medical costs (in the "ME" randomization), more generous health insurance coverage for preventive care for women can lead to a reduction in total medical costs (in the "WOMEN" randomization).

↑ insurance, ↓ financial stress: dummy equals 1 if respondent agrees or strongly agrees that more generous

health insurance can help people (in the control group), the respondent themselves deal with (in the "ME" randomization), women (in the "WOMEN" randomization) deal with unexpected large medical costs reducing the financial stress.

Unfair to pay more if pre-existing conditions: dummy equals 1 if respondent believes that it is very unfair or unfair that that people with pre-existing conditions have to pay more for their health insurance than people without pre-existing conditions (in the control group), if the respondent themselves had to pay more for his own health insurance than people with fewer pre-existing conditions than him (in the "ME" randomization), if women with pre-existing conditions have to pay more for their health insurance than women without pre-existing conditions (in the "WOMEN" randomization).

Unfair to pay more if worse health: dummy equals 1 if respondent believes that it is very unfair or unfair that that people born with worse health have to pay more for health care or insurance than people born with better health(in the control group), if the respondent themselves had to pay more for his own health insurance than people born with better health than him (in the "ME" randomization), if women born with worse health have to pay more for health care or insurance than women born with better health (in the "WOMEN" randomization).

Health issue out of own control: dummy equals 1 if the respondent believes that health issues are mostly the result of circumstances outside of one's control (in the control group), that his own health issues are mostly the result of circumstances outside of his own control (in the "ME" randomization), that women's health issues are mostly the result of circumstances outside of their control (in the "WOMEN" randomization).

Healthcare to all important bc of contagion: dummy equals 1 if respondent strongly agrees or agrees that it is important that everyone (in the control group), that the respondent themselves (in the "ME" randomization), that all women (in the "WOMEN" randomization) can afford proper health care because people who become sick with a contagious disease could have negative effects on others too.

Important to to help low-incomes: dummy equals 1 if the respondent strongly agrees or agrees that it is important to financially help low-income families (in the control group), families like that of the respondent themselves (in the "ME" randomization), low-income women (in the "WOMEN" randomization) so that they can afford medical care.

Access to healthcare should improve: dummy equals 1 if the respondent believes that access to healthcare should be improved for many families.

Insurance system unfair: dummy equals 1 if the respondent believes that the US insurance system is somewhat unfair or very unfair.

Dissatisfied health insurance: dummy equals 1 if the respondent is somewhat dissatisfied or very dissatisfied with the health insurance in the U.S.

Medicare for all: support: dummy equals 1 if respondent supports or strongly supports Medicare-for-all.

Medicare for all: don't know enough: dummy equals 1 if the respondent answers that he does not know enough to the question about whether he supports or opposes Medicare-for-all.

Support transfers to low-inc.: dummy equals 1 if respondent supports or strongly supports providing additional transfers or subsidies to low-income families to help them with the costs of their health care

Support individual mandate: dummy equals 1 if respondent supports or strongly supports having an individual mandate.

Support Employer mandate: dummy equals 1 if respondent supports or strongly supports having an employer mandate whereby every large employer, with more than 50 employees, is obliged to offer health insurance

plans for their employees.

A-5 Sample of Answers to the Open-ended Question "What are you Main Considerations about the Health Insurance Policy?"

1. **Affordability:**

   "Affordable premiums, affordable prescriptions costs to patients, cap on how much patient has to pay out of pocket, discounts for maintenance medications like insulin."

   "A system where high quality care was provided at a reasonable cost. Decisions on health were based on the best available care. Care would not be based on ability to pay."

2. **Coverage :**

   "It would be to provide some type of affordable coverage to all including coverage for pre-existing conditions, regular checkups and life long conditions. It should include dental, vision, hearing and all other health related issues as well as mental health and drug or alcohol dependency treatment. It should also cover reasonably priced options for necessary medications."

3. **Efficiency:**

   "Letting the marketplace dictate rather than government regulations. Competition, especially across state lines, will bring about more competitive rates and higher quality of service for policy holders."

   "Putting healthcare decisions back in the hands of the patients - a free market solution that allows for competition and choice and that everyone pays for their own insurance."

4. **Taxation:**

   "One that is paid for by our taxes and covers everyone."

   "Government sponsored healthcare paid by taxing the wealthy."

5. **Pharma :**

   "A system that pharmaceutical companies and business managers are not responsible for the price and forms of care available to the average citizen."

   "One that actually benefits the one paying for the insurance and not the lion's share of the money going to the CEO's of the insurance companies, hospitals and big pharma. We now pay 'extortion' fees to get insurance which many, many cannot even afford to use after all the deductables and copays and insurance premiums. Completely useless to have, only benefits the insurance companies."

6. **Quality:**

   "To me it is very important that health insurance systems provide high quality service to every individual regardless of their financial capacity."
