

Can AI Help Courts be Fair and Just?

Unlocking the Positive Effects of Justice on Economic Development

Daniel L. Chen

Evelyn Green Davis Fellow

Radcliffe Institute for Advanced Study at Harvard

Justice: **equal treatment before the law** ($y = f(X) + \varepsilon, a \rightarrow X$)
equality based on recognition of difference
($y \perp W, \text{var}(\varepsilon) \perp W, a \nrightarrow W$)

control principle and merit principle: individuals responsible only for events that are under their control
W: race, gender, masculinity, name, football, weather, judge's lunchtime, preceding case, ...

Justice: **equal treatment before the law** ($y = f(X) + \varepsilon, a \rightarrow X$)
equality based on recognition of difference
($y \perp W, \text{var}(\varepsilon) \perp W, a \nrightarrow W$)

control principle and merit principle: individuals responsible only for events that are under their control

W: race, gender, masculinity, name, football, weather, judge's lunchtime, preceding case, ...

The weather

Judges deny refugees asylum when the weather is too hot or too cold

Chen and Egel, ACM AI & Law 2017

Time of Day

They grant asylum more before lunch and less after.

1M decisions

The defendant's name

They assign longer sentence lengths to defendants whose first initial matches their own.

First Letter of First Name

First Letter of Last Name

The defendant's birthday

When they do the opposite and give the gift of leniency

Figure: US and French judicial leniency on defendant birthdays

Chen and Philippe, J Econ Behavior & Org 2023

NFL Football

Judges are more lenient the day after their team wins, rather than loses.

Chen and Loecher, J Behavioral & Experimental Econ, R&R

Ramadan

Muslim judges are more lenient the longer is Ramadan

Pakistan and India

Mehmood, Seror, Chen, Nature Human Behavior 2023

Snap judgments

We can use machine learning to predict asylum decisions with 80% accuracy the date the case opens.. and when it closes.

Motivated reasoning

.. and predict partisan identity with 75% accuracy using judges' opinions

Lu and Chen, Plos-ONE R&R

The Disavowal of Decisionism in American Law

and motivated decision-making reflected in the timing of exits

Strategic Retirements around Presidential Elections

are also Growing

Chen and Reinhart, Rev Law & Econ 2024

Elections and wartime also affect decisions

Berdejo and Chen, J Law & Econ 2017

Gambler's Fallacy

How people often imagine a sequence of coin flips:

0101001011001010100110100

A real sequence of coin flips:

0101011111011000001001101

Up to 5% of decisions reversed due to the gambler's fallacy

Chen, Moskowitz, and Shue, Quarterly J Econ 2016

In the US Supreme Court, the first sentence of the lawyers oral arguments are identical

Recording 1 of 66

Left Figure: Judges have strong habits

A judge who is generally lenient in other cases is likely to be lenient in a given case

Inattentiveness of Judge: Surprisingly Reversed vs. Reversed

(Time window: 3 monthly periods pooled together before/after shock. More attentiveness: the coefficient of interaction of surprisingly reversed dummy and time-period dummy is bigger)

Right Figure: Assess implicit risk ranking

Inattentiveness of Judge: Surprisingly Reversed vs. Reversed

(Time window: 3 monthly periods pooled together before/after shock. More attentiveness: the coefficient of interaction of surprisingly reversed dummy and time-period dummy is bigger)

If judges are 'ordering' their asylees, the most lenient judge letting in the most applicants should be rejecting only the "least safe" applicants

Their appeal success should be lower, which we see among **more attentive judges**

Right Figure: Assess implicit risk ranking

Inattentiveness of Judge: Surprisingly Reversed vs. Reversed

(Time window: 3 monthly periods pooled together before/after shock. More attentiveness: the coefficient of interaction of surprisingly reversed dummy and time-period dummy is bigger)

If judges are 'ordering' their asylees, the most lenient judge letting in the most applicants should be rejecting only the "least safe" applicants

Their appeal success should be lower, which we see among **more attentive judges**

.. but not less attentive judges

Inattentiveness of Judge: Surprisingly Reversed vs. Reversed

(Time window: 3 monthly periods pooled together before/after shock. More attentiveness: the coefficient of interaction of surprisingly reversed dummy and time-period dummy is bigger)

.. who may be more prone to other extraneous factors

.. such as weather

Judges' Attentiveness and Vulnerability to Weather

WHY “WRONG DIAGONAL” FOR BLACK DEFENDANTS?

Using ML to Understand how Screeners Screen

Actually, flat for Whites, *upward* slope for Blacks (left)

Algorithms as Prosecutors: Identifying Characteristics Noisy to Human Prosecutors

- Judges released along “right” diagonal for Whites but not Blacks (right)

in *Arnold, Dobbie, Yang, Quarterly J Econ* 2017

WHY “WRONG DIAGONAL” FOR BLACK DEFENDANTS?

1. Screening Increases Racial Sentencing Gap

- Since black defendants are less likely to be declined, “real” racial disparity magnifies (on right)
 - ▶ Is statistical discrimination the reason for disparate screening?

How Prosecutors Exacerbate Racial Disparities

2. White Prosecutors Screen-In Fewer Cases that result in Shorter Sentences

- White and black screeners let in different cases
 - ▶ If targeting the most severe ones, white screener cases should have *longer* sentences

3. White Trial Prosecutors Obtain Longer Sentences

- Most District Attorneys are elected; want to appear tough-on-crime (Pfaff 2016)
- Why are white trial prosecutors more effective in this goal?

4. Black Trial Prosecutors + White Judges Render Shorter Sentences

- The difference seems attributable to the interaction of hierarchy and race
 - ▶ Black trial prosecutors + Black judges (on right) render similar average sentences as White trial prosecutors do

The Legal Reproduction of Racism: Racial Hierarchy Determinants of Sentencing Disparities

5. Black Trial Prosecutors + Black Judges Eliminate or Reverse Racial Sentencing Gap

- Hard to explain as statistical discrimination

By 1990, 40% of federal judges had attended an economics-training program.

The New York Times

19 U.S. Judges Study Economics
To Help Them in Work on Bench

Special to The New York Times

KEY LARGO, Fla., Dec. 18—For three weeks, 19 Federal judges from around the country took a grueling, six-day-a-week course in economics that ended here yesterday.

With classes starting at 9 A.M. and sometimes ending at 10 P.M. or later, the judges received the equivalent of a full semester at the college level.

Their teachers were, among others, two Nobel laureates in economics, Paul Samuelson and Milton Friedman. The courses, sponsored by the Law and Economics Center of the University of Miami School of Law, made up what is believed to have been the first such institute for Federal judges.

"It was a very enriching experience," said Chief Judge John W. Reynolds of the Federal District Court in the Eastern District of Wisconsin. "We were here not to become economists, but to understand the language of economics. Courts are only as good as judges and the lawyers who appear before us. By and large, our training in economics is not really satisfactory, and yet we are being increasingly called upon to decide economic issues."

The program dealt basically with economic theory, and an effort was made

not to relate the theoretical studies to cases now pending in Federal court. "One has to be very cautious in dealing with Federal judges," said Henry Mann, director of the center. "Our goal has been to give them the most recent thinking in economic theory and enable them to better understand the testimony of expert witnesses and lawyers."

Chief Judge David N. Edelstein of the Federal District Court in the Southern District of New York, who is the judge in the International Business Machines Corporation antitrust case—regarded as many lawyers as the most important antitrust litigation of the century—informally attended the institute to clear any future questions about a possible conflict of interest.

"All the lawyers were very cordial and replied that they saw no grounds for a conflict of interest in my coming here," Judge Edelstein said.

From the beginning, the judges, some of them 60 years old or over, behaved like students, deferring to their teachers and reminiscing about undergraduate days decades ago.

The results of these seminars were dramatic

We can see economics language used in academic articles became prevalent in opinions.

The results of these seminars were dramatic

We can see economics trained judges changing how they decided

Econ vs Non-Economics Cases

on Labor/Environmental Cases

Ash, Chen, and Naidu, Quarterly J Econ, 2024

Impacting their peers

We can see economic language traveling from one judge to another and across legal areas.

Impact of Peer Economics Training on Use of 'Deterrence'

The Geneology of Ideology

$$P_m = \frac{d_{m \rightarrow m}}{d_{\rightarrow m} + \delta} / \frac{d_{m \rightarrow m} + \delta}{d_{\rightarrow m} + \delta}$$

Scoring Memetic Phrases

When judges were given discretion in sentencing

economics trained judges immediately rendered 20% longer sentences relative to the non-economics counterparts.

The Prejudices of Economic Ideology

Economics trained judges are harsher to blacks

Impact of Completed Courts

Completed courts increased court satisfaction and access to justice

particularly for the disadvantaged

The share of litigants with only primary school education grows by 16 percentage points

Transforming the courts to being more nationally representative

Firm Investment

Increased investment by firms by 37%

especially in contract intensive industries

Effects of Court Completed on Capital Stock per Worker

- a total added investment of USD 100 million, more than double the costs of the program (USD 45.5 million)

Building Courts: Effects on Access to Justice and Economic Development

WE SEE THAT COURT SPEED MATTERS

Dynamic Point Systems?

Apply sharing economy principles of low transaction costs, coordination of information networks and better resource allocation and utilization.

Legal Uber App

The web app will display a dashboard interface that allows the supply side user (clerk or judge) to view case availability. Case priority can be determined by how long the case has been idle and in which region it exists. These factors can influence not only the prioritization of a case but also the reward that is offered for taking the case. Participants can volunteer into an incentive scheme that allows them to earn points as they complete the cases. These points can then be spent on various rewards like access to interns, working from home allowance, flexible scheduling, and public recognition. Judges and clerks could also share schedules and professional details like their location and expertise with the system which can assist in determining their suitability for the platform.

Improve performance in congested courts by balancing workload across courts, without incurring cost of hiring new staff.

SEEING STATISTICS ABOUT THE SELF

Dashboard RCT improved case outcomes

increased settlement rates

Improving the Quality of Legal Aid: Tech-Enabled Mediation in Peru

Research design: Randomized controlled trial across 80 legal stations in Peru

- **Treatment:** Conciliator App to self-assess performance indicators
- **Control:** No access

App increases agreement rate by 0.5 standard deviations.

RCT 1.2: Coaching or Vertical accountability

RCT 2: Reddit forum using Netflix recommendation system

Dashboard RCT improved judicial performance

increased case clearance rates

Information Provision and Court Performance: Experimental Evidence from Chile

Research design: RCT across 55 court stations

- Simple dashboards alleviate the impacts of limited information.
- Courts adjust their decisions and improve court efficiency. Email promotion and feedback increase the timely resolution rate by 0.2 and 0.5 standard deviations, respectively, and hearing programming by 0.7 and 1.3 standard deviations, while they decrease the realized hearings by -1.3 and -1.0 standard deviations for those treated.

simple e-justice interventions enhance judicial state capacity

AEARCTR-0005512, *Information Provision and Court Performance: Experimental Evidence from Chile*

WHAT ABOUT E-COURTS?

What is the Impact of E-Justice?

E-filing reduced case duration and increased access to justice,
particularly for smaller parties

Peru & Chile Improving the Performance of Justice Services (P162833, P173860)

Question: Can technological innovations improve the performance of courts and the overall wellbeing of litigants?

Intervention:

- Electronic filing of cases (LTE) began in 2016
- Interrupted time-series analysis of LTE courts
- Total number of cases filed and resolved increased
 - Duration of cases significantly decreased
 - Even for non-spurious cases
- Smaller firms have greater access
- Next: What are the impacts on firms?

IE design and timeline:

- Geospatial Impact Evaluation (GIE)
- 2020-

Key Feature : Electronic processing is a common policy intervention; covid accelerates development of e-justice solutions

Impact of e-Access to Justice: Evidence from Chile

Chatbot & WhatsApp RCT improved dispute resolution and fiscal recovery for the state

Impact of Online Lok Adalats on Judicial Efficiency

With SAMA

Context

- A 2004 study in the US demonstrates that Alternative Dispute Resolution approaches reduced the number of trials (Stipanowich, 2004). We extend this hypothesis to Online Dispute Resolution with the aim to measure its impact on justice outcomes and judicial efficiency.
- This workstream seeks to deploy the technologies developed by Sama to scale up mediation services to poorly served locations in partnership with various state legal service authorities across India.
- Chatbot and WhatsApp performs best and significantly improved settlement rate and fiscal recovery for the state.

Racial Bias and In-Group Bias in Virtual Reality Courtrooms

Racial Bias and In-Group Bias in Virtual Reality Courtrooms

Samantha Bielen *Hasselt University*
Wim Marneffe *Hasselt University*
Naci Mocan *Louisiana State University*

Abstract

We filmed videos of criminal trials using three-dimensional virtual reality (VR) technology, prosecuted by actual prosecutors and defended by actual defense attorneys in a real courtroom. This is the first paper that utilizes VR technology in a non-computer-animated setting. We alter only the race of the defendants, holding all activity in the courtroom constant, to create arguably perfect counterfactuals. Law students and economics students made conviction and sentencing decisions in these trials that differed only in defendants' race. White evaluators are harsher toward minority defendants in both conviction and sentencing. Minority evaluators are harsher toward minorities in conviction but more lenient in assigning prison terms. This pattern of behavior leads to significant bias against minorities at all stages—conviction, prison sentence, and fine—which is partly a reflection of the numerical majority of the evaluators being white. The same racial bias is observed in the decisions of practicing attorneys.

CAN WE PERSONALIZE DEBIASING TO THE LISTENER/VIEWER?

Stage 1: Predicted Self

- In Stage 1, people use AI as a support tool, speeding up existing processes (for example, by prefilling forms)
 - ▶ An AI-based recommender system offers a decision-maker the best prediction of themselves, based on their previous decision-making, **from a model using only legally relevant features X.**
 - ★ assess judges vs. their predicted self
 - ▶ (1) Increase consistency across similar cases by offering the relevant reference points and cabining the influence of extraneous factors.
 - ▶ (2) Seeing the predicted self leverages self-image motives of pro-social decision-makers (Benabou and Tirole 2011).
 - ▶ (3) Deviating from defaults facilitates conscious deliberation.
- self-image (predicted self)

Stage 1: Predicted Self

- In Stage 1, people use AI as a support tool, speeding up existing processes (for example, by prefilling forms)
 - ▶ An AI-based recommender system offers a decision-maker the best prediction of themselves, based on their previous decision-making, **from a model using only legally relevant features X.**
 - ★ assess judges vs. their predicted self
 - ▶ (1) Increase consistency across similar cases by offering the relevant reference points and cabining the influence of extraneous factors.
 - ▶ (2) Seeing the predicted self leverages self-image motives of pro-social decision-makers (Benabou and Tirole 2011).
 - ▶ (3) Deviating from defaults facilitates conscious deliberation.
- self-image (predicted self)

Stage 2: Prediction of Error

- A deviation that is more likely to render an error (from a model using all available features X and W) can be accompanied by a nudge to “be more attentive” or spend more time to make a better decision.
 - ▶ (1) A nudge, instead of a checklist, might impose less bandwidth.
 - ▶ (2) Save time and energy to focus on novel, complex cases.
- self-improvement (nudges)

Stage 3: Explanations

- A decision-maker may want interpretable machine learning **and** request a reason for why the deviation may lead to mistakes.
 - ▶ (1) Stage 3 elevates the AI to the role of a more general coach, providing feedback on choices.
 - ▶ (2) The more people feel that their autonomy is protected and that they are in control of the conversation—able to choose when feedback is given—the better they respond to it. (West and Thorson 2018)
- self-understanding (why)

Stage 4: Dialogue

- Of course, it is always possible that the AI system's suggestion would not take into account some reliable private information that the decision-maker might have access to.
 - ▶ Where this happens, the AI system would be steering the decision-maker off course rather than correcting for their inconsistencies.
 - ▶ Therefore, a dialogue, encouraged between the decision-maker and the AI system, allowing for the AI to learn from the user as well.
- self-expression (autonomy)

Stage 5: Community of Experts

- AI brings in other people's decision histories and patterns, serving as a platform for a community of experts.
 - ▶ A decision-maker may want to access a community of experts by seeing what the algorithm predicts other to do.
 - ▶ This can be accessible as a dropdown menu, to seek advice from a particular decision-maker,
 - ★ or as a statistical distribution to protect privacy.
- community of practice (self vs. others)

Stages 6+

- Stage 6, train novices
 - ▶ who tend to make more mistakes
 - ▶ experts can input a preferred decision
 - ▶ or use prediction if appealed
- Stage 7, open access for citizens
 - ▶ for transparency & accountability (Kenya)
 - ▶ social image
- Stage 8, use feedback from dialogue stage as recommender system
 - ▶ with A/B testing to generate causal inference

Stages 6+

- Stage 6, train novices
 - ▶ who tend to make more mistakes
 - ▶ experts can input a preferred decision
 - ▶ or use prediction if appealed
- Stage 7, open access for citizens
 - ▶ for transparency & accountability (Kenya)
 - ▶ social image
- Stage 8, use feedback from dialogue stage as recommender system
 - ▶ with A/B testing to generate causal inference

Stages 6+

- Stage 6, train novices
 - ▶ who tend to make more mistakes
 - ▶ experts can input a preferred decision
 - ▶ or use prediction if appealed
- Stage 7, open access for citizens
 - ▶ for transparency & accountability (Kenya)
 - ▶ social image
- Stage 8, use feedback from dialogue stage as recommender system
 - ▶ with A|B testing to generate causal inference

Randomization of cases already yields A|B testing

Decisions are not random, but judges are randomly assigned

Biographies Predict Church-State Separation

Minority religion judges prefer separate church and state

The Political Economy of Beliefs

$$\begin{cases} \text{Law}_{ct} = \alpha_{ict} + \phi Z_{ct} + \gamma_1 X_{ict} + \gamma_2 W_{ct} + \eta_{ict} & (\text{machine learning step}) \\ Y_{ict} = \alpha_{ict} + \rho \text{Law}_{ct} + \beta_1 X_{ict} + \beta_2 W_{ct} + \varepsilon_{ict} & (\text{causal inference step}) \end{cases}$$

firm activity

A Four Decade Analysis of Environmental Justice, Firms, and Pollution in India

Automated Impact Analysis?

locate the nearest past cases, assignment of judges to those cases, and predict their rulings to identify the consequences of decisions

Law Platform

India Law platform is a data discovery and interactive tool for researchers, judges, and policymakers. There are two essential features of this platform.

First, it locates the closest cases to any given case. This allows a user to understand previous rulings and how past decisions were ruled. This can be filtered by jurisdiction, time period, or judge. More broadly, the user can research the details of the cases and what precedents or statutes were cited.

Second, it allows the user to analyse the effects of rulings on downstream outcomes. A dropdown menu offers available outcomes in the platform so that the user can specify the causal outcome of interest. To do this causal analysis, the platform first coalesces the nearby past cases to a given case. Then it uses the identity of the judges assigned in those cases as a historical natural experiment.

Mostly Harmless Machine Learning: Learning Optimal Instruments in Linear IV Models

Jeffrey Chen¹, Chen Chen², and Gregory Lewis³
Paul C. Miller School of Law, University of California, Berkeley
Research Center for Law and Public Policy for the Americas, Policy Research Institute
¹University of Toronto, ²University of Toronto, ³University of Toronto

Instrumental Variables and Causal Inference

Instrumental variable (IV) models are concerned with identifying causal effects.

Simplest version: $Y = \beta_0 + \beta_1 X + \epsilon$, where ϵ is uncorrelated with X . If X is the treatment, and Y is the outcome, then β_1 is the causal effect of X on Y .

Two-stage least squares (2SLS): $Y = \beta_0 + \beta_1 X + \epsilon$, where ϵ is uncorrelated with X . If Z is the instrument, then β_1 is the causal effect of X on Y .

Validity of 2SLS: $E[\epsilon Z] = 0$, $E[Z^2] > 0$.

Machine Learning with Sample Selection

Left sample bias: $E[Y|X=1] > E[Y|X=0]$.

Right sample bias: $E[Y|X=1] < E[Y|X=0]$.

Nonlinear: $E[Y|X=1] \neq E[Y|X=0] + \beta_1$.

Nonlinear: $E[Y|X=1] \neq E[Y|X=0] + \beta_1$.

Nonlinear: $E[Y|X=1] \neq E[Y|X=0] + \beta_1$.

Empirical Outcomes

Empirical outcomes are the results of the causal effect of the treatment on the outcome.

Empirical outcomes are the results of the causal effect of the treatment on the outcome.

Empirical outcomes are the results of the causal effect of the treatment on the outcome.

Chen, Chen, and Lewis; NeurIPS 2020 (ML for Policy)

Would informing people about impacts of decisions increase intrinsic motivation?

RENEWED ATTENTION ON DISPARITIES IN THE JUSTICE SYSTEM

How Can We Train Judges to Improve Rule of Law?

- The training of public officials is one of the key dimensions governments use to improve bureaucratic performance
- For example, in 2017 alone, the U.S. allocated approximately 4% of its annual budget for personnel compensation and benefits, or around \$10 billion, towards training civil servants (Credibility Engine 2021; USA Spending)
- Despite its significance, there is limited empirical research on effective methods to improve the training of public officials using RCTs
- Particularly relevant in the judiciary, as slow and unreliable justice systems represent a key barrier to economic growth

How Can We Train Judges to Improve Rule of Law?

WHAT ABOUT ECONOMETRICS?

Training deputy ministers in school of thought associated with credibility revolution

- Book lottery
- Videos by Authors
- Graded summarization and visualization exercises (SEL)
- Self-persuasion presentation to others

Metrics Training Increased Demand for Causal Evidence

Treated Policymakers Update Posterior Beliefs

Increased Responsiveness to Causal Evidence

Treated policymakers' performance in national research methods and public policy exams improves and commissioning of RCTs in policy making increases

Metrics Training Impacts Deworming Project Choice

In their official duties, twice as likely to choose and triple funding for policies with RCT evidence

Metrics Training Improves Fiscal State Capacity

The results extend to tax officers: Econometrics education led to a 20% increase in the use of tax reminders and 40% increase in tax collection

AEARCTR-0010583, *Training Policymakers in Econometrics II, Management Science R/R*

WHAT ABOUT A FRIENDLER ECONOMICS?

Metrics Training Improves Fiscal State Capacity

The results extend to tax officers: Econometrics education led to a 20% increase in the use of tax reminders and 40% increase in tax collection

Role Models	Social Comparison (Stage 5)
Moral Bandwagoning	Community of Practice (Stage 6)

Setting

- Judicial Academy of Peru is working on the transition from theory to case-based teaching, which was already the primary method of teaching in American law schools since the 1970s (Moskovitz 1992).
- In this two-year engagement, we conducted three randomized light-touch interventions.

Socratic Method (Study 1)

a pedagogical innovation from antiquity focusing on reflective inquiry

Socratic Treatment

- Socratic treatment encourages student to think critically - challenging their own as well as their teachers and classmates assumptions about the material covered in class.

THINK ABOUT THESE QUESTIONS

1. **WHAT OPINIONS** do you have about today's topic?
2. What **ASSUMPTIONS** are you making towards that opinion?
3. During the class, are your assumptions proving **TRUE** or getting **CHALLENGED**?
4. **WHEN** are your assumptions the **SAME** as your classmates?
5. **WHEN** are your assumptions **DIFFERENT** from your classmates?

- Control treatment reminded students to focus on the teacher's ideas and take notes

Socratic Training improved Performance

Students assigned to Socratic treatment were 2.6 percentage points more likely to pass
and increased grades by 0.23 standardized units

VARIABLES	ITT		ToT	
	(1) grade	(2) pass	(3) grade	(4) pass
Assigned to Socratic	0.311* (0.173) [0.088]	0.026* (0.014) [0.088]

Community of Practice (Study 2)

- Community of Practice (Wenger 1991) a pedagogical innovation focusing on regular and concrete learning from peers.
 - ▶ The peer met the teacher to provide feedback
 - ★ teaching strategies: case method, role play, student participation

Community of Practice increases Grades and Satisfaction

	Grades					Satisfaction	
	(1) Forum grade	(2) Reading grade	(3) Homework grade	(4) Exam grade	(5) Final grade	(6) With teacher	(7) With course
Monitoring	0.0702 (0.0759)	0.0818** (0.0347)	0.0794 (0.0499)	0.1609 (0.0956)	0.1196** (0.0578)	0.0964* (0.0553)	0.0875* (0.0504)
Observations	4,968	4,988	5,017	5,000	5,021	10,023	9,967
R ²	0.13221	0.16559	0.12541	0.06765	0.09313	0.02617	0.03810
Dependent variable mean	0.04144	0.01453	0.05110	0.08771	0.07569	0.06086	0.06448
Round fixed effects	✓	✓	✓	✓	✓	✓	✓
Course fixed effects	✓	✓	✓	✓	✓	✓	✓

- 0.12 standard deviations (SD) in final grades
- 0.10 and 0.09 SDs in satisfaction

Community of Practice increases Case Clearance Rates

	(1)	(2)	(3)	(4)	(5)	(6)
	Ruling favors plaintiff	Appeal of ruling	Reversal of ruling	Clearance rate	Time to disposition	Timely Resolved
Panel A: Post Treatment						
Monitoring	0.0866 (0.1189)	-0.1017 (0.1384)	-0.0038 (0.0591)	0.1683** (0.0759)	-0.2410 (0.2485)	0.1799* (0.1047)
Observations	169	169	169	203	219	219
R Squared	0.102	0.326	0.158	0.101	0.182	0.191
Dependent variable mean	0.8182	0.4915	0.0899	0.3220	-0.0496	0.4622

Note: Standard errors are clustered at the judge level. Time to disposition is standardized with respect to the control group mean. All regressions include strata controls. All regressions include judge pre treatment covariates including age, sex, years of tenure, years in the bar association. They also include case speciality covariates. Panel A shows regression coefficients from a post-treatment specification. Panel B shows coefficients from a DiD specification. * *p* < 0.10, ** *p* < 0.05, *** *p* < 0.01.

8-month training program

Community of Practice effects are larger for females

Females in treated classes had higher grades and satisfaction

	Grades					Satisfaction

WHAT ABOUT DIRECTLY ADDRESSING IMPLICIT BIAS

STEREOTYPED DECISION-MAKING, EARLY PREDICABILITY, AND INATTENTIVENESS

Option to Self-Reflect (Study 3)

- Weak evidence for implicit bias training programs (Paluck, et al. 2021)
 - ▶ Implicit bias training programs involve compulsory self-reflection
 - ▶ The more people feel that their autonomy is protected and that they are in control of the conversation—able to choose when feedback is given—the better they respond to it (West, et al. 2018)
 - ▶ Does the choice to learn about implicit biases reduce implicit bias?
- Judges randomly assigned to
 - ▶ have the option to take IAT became less biased in their IATs

- [0, 0.15]: Low or none bias
- [0.15, 0.35]: Slight bias
- [0.35, 0.65]: Moderate bias
- [0.65, ...]: Strong bias
- Values **greater** than 0:
Association between
feminine and career
- Values **lower** than 0:
Association between
feminine and family

Option to Self-Reflect (Study 3)

Personalized Case-Based Teaching?

using the tools of machine learning

Leverages history of judge's own written decisions to evaluate how such judge would decide on a case similar to a curricular example (predicted self)

- Bringing case-based teaching to the next level (socratic method)
- Community of practice, Role models (predictions of others)
- Helping create culture of precedent
